INDUSTRIAL WASTE DISPOSAL PERMIT CONDITIONS AND LIMITATIONS

PART A: ON-SITE DISPOSAL - PUBLIC SEWER

1. Disposal of industrial wastewater to the public sanitary sewer shall be limited to the flow indicated on the industrial waste disposal permit.
2. Pretreatment, monitoring and control facilities required under this permit shall consist of the system(s) indicated on the approved plans.
3. Industrial Wastewater shall at all times meet the effluent quality, indicated on the attached Part D, if applicable prior to discharge to the sanitary sewer system.
4. If applicable, the permittee shall submit periodic compliance reports, as indicated on the attached Part E and/or any self-monitoring or industrial wastewater treatment surcharge reports which may be required by the County Sanitation Districts of Los Angeles County. **Note: Self-monitoring reports required by the Sanitation Districts are to be submitted directly to the Sanitation Districts.**
5. All required industrial wastewater collection, pretreatment, monitoring, disposal and sampling facilities must be installed in accordance with approved plans prior to initiating any discharge to the sewer.

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
INDUSTRIAL WASTE DISPOSAL PERMIT

AP

PART A: ON-SITE DISPOSAL - PUBLIC SEWER (CONTINUED)

6. Discharge of any toxic, flammable, explosive, corrosive, radioactive or non-biodegradable substance to the sewer is prohibited except as provided in **Part A.3** above.
7. Discharge of uncontaminated cooling water, groundwater, storm water or surface drainage water to the sanitary sewer is prohibited except as specifically authorized by this permit.
8. Discharge of industrial wastewater to the sanitary sewer with temperatures exceeding 140° F is prohibited.
9. Other: **PRIOR TO INITIATING ANY DISCHARGE TO THE SANITARY SEWER, THE APPLICANT SHALL SUBMIT A NEW APPLICATION FOR AN INDUSTRIAL WASTE DISPOSAL PERMIT (IWDP) AND SHALL SECURE SUCH IWDP. ALL PRETREATMENT SYSTEMS SHALL BE MAINTAINED IN A DRY AND SANITARY CONDITION AT ALL TIMES.**

CONDITIONS A -- GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer-Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.
2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:
 - a. Removal of tank shall require a three (3) business day advance notification.
 - b. Permanent closure of a tank in place or a temporary closure shall require a 30 day written notification.
3. The fee is \$141 for the first tank plus \$38 for each additional tank.
4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.
5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.
6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74-81, December 1981, or any other methods that will provide equivalent or better protection.
7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.
8. Decontamination shall require the following, as a minimum:
 - a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
 - b. The personnel shall be sufficiently skilled to safely carry out such operation.
 - c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
 - d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B -- TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable parts.
2. A temporary closure shall not exceed 90 days.

CONDITIONS C -- PERMANENT, TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Part D and any other applicable parts.
2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.
3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.
4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.
5. After inspection, tanks shall be transported to a legal disposal point.
6. If the tank had stored materials other than motor fuel, fuel oil, or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.
7. The site shall be backfilled and recompacted to a relative compaction of 90%.

CONDITIONS D -- PERMANENT, TANK(S) IN PLACE

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Parts B or C, and any other applicable parts.
2. Owners/operators shall demonstrate part site integrity as follows:
 - a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test borings may be drilled vertically and the reason stated in the report in 2-h. below.
 - b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
 - c. For multiple tanks, as a minimum, borings shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
 - d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
 - e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
 - f. Soil samples shall be capped immediately with teflon or aluminum.
 - g. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
 - h. A report containing the results of the above analysis shall be submitted to the County Engineer.
3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials -- Guidelines."
4. A report shall be submitted to the County Engineer containing the results of the site investigation.

NOTICE TO TANK REMOVAL CONTRACTORS

Gentlemen:

The Department of Public Works, Waste Management Division, is in the process of revising the permit application forms for closure of hazardous material underground storage facilities. The new forms will carry the following information notice:

"Contaminated tanks and residues that may be left in tanks to be closed may be a hazardous waste which must be transported and disposed of pursuant to Chapter 6.5, California Health and Safety Code. Failure to comply may be prosecuted as a felony violation."

Contractors engaged in the removal of tanks are cautioned that the above information notice reflects established State law and applies equally to all current and outstanding closure permits issued by this office.

Your cooperation in the safe disposal of hazardous materials is appreciated.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

 LOS ANGELES, CALIFORNIA 90033

Closure Permit
 No. 3157 B
 File No.
 I-877-2Y

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.
2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
<u>A</u>	<u>2 feet below tank invert</u>	<u>TCHC</u>	<u>EPA 8015</u>
<u>B</u>			

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.
4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.
5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).
6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.
7. All soil/groundwater samples obtained shall be handled and transported to a laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.
8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.
9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

**LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS**

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 4089, Los Angeles, CA 90051 containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
3. Description of methods for obtaining, handling and transporting samples.
4. Time and date samples were obtained.
5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.
6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil.
11. Any observations of site contamination.
12. Remedial action plan to mitigate contamination.
13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.

Subject: Closure Report
 Closure Permit No. 3157-B
 File No. 877-2Y

Property Location: 8420 S. Atlantic Blvd.
 Cudahy, California 90201

Gentlemen:

This report is submitted in accordance with the provisions of Closure Permit No. 3157-B, issued August 26, 1987. The following information is in specific response to the permit:

- (1) Facility File No. 877-2Y
 Closure Permit No. 3157-B
- (2) A plot plan of subject property is enclosed (Figure 1).
- (3) The two soil samples (SP-A and SP-B) were taken in stainless steel tubes from materials found approximately 2 ft. below the invert of the tank. One sample was taken under each end of the tank approximately 2 feet in from the ends.

Upon removal of the soil samples, the tubes were immediately capped and sealed, inserted in a sealed plastic bag and placed in a refrigerated ice chest ("blue ice"). The samples were subsequently placed in a refrigerator and retained there until picked-up by Associated Laboratories as shown on the Chain-of-Custody document (enclosed).

In preparation for obtaining the soil samples, the sampling tubes were thoroughly washed in hot soapy water (TSP), rinsed in hot water and heat dried. Immediately prior to obtaining the soil samples the tubes were rinsed with distilled water.

C08703227W

Los Angeles County
Department of Public Works
Waste Management Division

Closure Report con't (Closure Permit No. 3157-B)
Page 2

- (4) As indicated on the Chain-of-Custody form, soil Sample No. 1 (SP-A) was obtained at 8:45 a.m., Sample No. 2 (SP-B) was obtained at 9:10 a.m. on September 17, 1987.
- (5) Soil borings were not required at this site.
- (6) Chain-of-Custody documentation for the two soil samples is enclosed.
- (7) The tank was disposed of by delivery to KENT AND SON at their facility located at 428 W. 132 St., Gardena, CA.
- (8) Copies of the results of analyses of the soil samples by Associated Laboratories are enclosed.
- (9) Groundwater was not encountered in the excavations. Groundwater elevation maps prepared by the Los Angeles County Flood Control District (Fall 1984) indicate that ground water is at a depth of approximately 200 feet below the ground surface in the vicinity of this site. This depth is further confirmed in the report titled "Annual Survey Report on Ground Water Replenishment", 1987, Plate 1 "Location Map and Deep Aquifer Ground Water Contours", November, 1986 prepared for Central and West Basin Water Replenishment District.

This area is underlain by fine-grained silty sands, sandy silts and clay. Sandy lenses which occur in the subsurface are generally discontinuous and are relatively thin.

- (10) No soil was removed from the property.
- (11) Ground surface above tank was and is paved. At the time of tank excavation, the pavement exhibited a minimum of cracks and separations. Soils immediately below the paving and above as well as around the tank appeared to be fairly consistent in texture and color (medium brown). No evidence of any spills or soil contamination existed around the tank other than a minor discoloration of the soil area immediately around the filler neck of the tank. A sample of soil was taken from near the filler and analyzed in the field by use of a portable hydrocarbons detector. The instrument did not register the presence of hydrocarbons.

Los Angeles County
Department of Public Works
Waste Management Division

Closure Report con't (Closure Permit No. 3157-B)
Page 3

A clay layer was found at approximately 2.5 to 3 feet below the tank. This layer was left undisturbed. The soil above this layer appeared normal in color, had no noticeable odor, nor did it contain noticeable moisture.

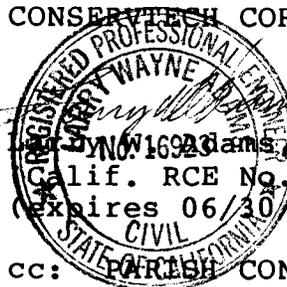

Soils from immediately above the clay were also checked with a portable hydrocarbons tester with no hydrocarbons being detected.

- (12) Based on the levels of petroleum hydrocarbons reported to be contained in the soil samples, it is recommended that remedial action to mitigate contamination at this site is not required, It is recommended that the Contractor be authorized to backfill the excavations.

Please feel free to contact the undersigned if there are any questions concerning the above Closure Report.

Respectfully submitted,

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.
2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
<u>A</u>	<u>2 feet below tank invert</u>	<u>TPHC</u>	<u>EPA 8015</u>
<u>B</u>	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.
4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.
5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).
6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.
7. All soil/groundwater samples obtained shall be handled and transported to a laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.
8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.
9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

ADDITIONAL CLOSURE REQUIREMENTS

The additional information or requirements checked below must be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 4089, Los Angeles, CA 90051, in order to complete the evaluation of Closure Permit No. 3157B.

- Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
- Insufficient number of samples were obtained. Additional samples required in accordance with attached Closure Permit Requirements.
- Describe method of obtaining, handling, and/or transporting samples.
- Indicate time and date samples were obtained.
- Submit logs certified by a CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils for all borings.
- Submit chain-of-custody documentation initiated by person obtaining sample through person at DOHS certified laboratory.
- Disposal destination of tanks and evidence of legal disposal.
- Analysis results by a State certified laboratory shall be submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
- Documentation as to depth of groundwater at facility.
- Manifests to document hazardous waste disposal of removed soil.
- Signature on the report is required of CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils.
- Define the vertical and lateral extent of contamination.
- Propose a remedial action plan to mitigate contamination.
- Other _____

Subject: Underground Storage Tank Removal
8420 S. Atlantic Boulevard, Cudahy
(September 1987)

Gentlemen:

Enclosed is a copy of letter dated March 23, 1989 from the County of Los Angeles, Department of Public Works, Waste Management Division concerning evidence of legal disposal of subject underground storage tank.

As indicated in Conservtech's Closure Report dated September 23, 1987, the subcontractor (Kent and Son) removed the tank from the site and transported it to 428 W. 132nd Street, Gardena. To satisfy the County request it will apparently be necessary for Mr. Kent to provide some form of documentation concerning his disposal of this tank.

As I recall, we did discuss the matter of State and County requirements concerning tank disposal with your subcontractor. However, Conservtech did not receive any written confirmation of ultimate disposal.

It is requested that you discuss this matter with Kent and Son and arrange for a response direct to the County. Please feel free to call to discuss this matter if there are any questions.

Very truly yours,

Larry W. Adams

Closure Permit
 No. 31537 B
 File No.
 I-877-2Y

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.
2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
A	2 feet below tank level	TPHC	TPC-2001
B			

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

4. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).
5. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.
6. All soil/groundwater samples obtained shall be handled and transported to a laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.
7. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.
8. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the

Please print or type. (Form designed for use on elite (12-pitch typewriter).

- (4) As indicated on the Chain-of-Custody form, soil Sample No. 1 (SP-A) was obtained at 8:45 a.m., Sample No. 2 (SP-B) was obtained at 9:10 a.m. on September 17, 1987.
- (5) Soil borings were not required at this site.
- (6) Chain-of-Custody documentation for the two soil samples is enclosed.
- (7) The tank was disposed of by delivery to KENT AND SON at their facility located at 428 W. 132 St., Gardena, CA.
- (8) Copies of the results of analyses of the soil samples by Associated Laboratories are enclosed.
- (9) Groundwater was not encountered in the excavations. Groundwater elevation maps prepared by the Los Angeles County Flood Control District (Fall 1984) indicate that ground water is at a depth of approximately 200 feet below the ground surface in the vicinity of this site. This depth is further confirmed in the report titled "Annual Survey Report on Ground Water Replenishment", 1987, Plate 1 "Location Map and Deep Aquifer Ground Water Contours", November, 1986 prepared for Central and West Basin Water Replenishment District.

This area is underlain by fine-grained silty sands, sandy silts and clay. Sandy lenses which occur in the subsurface are generally discontinuous and are relatively thin.

- (10) No soil was removed from the property.
- (11) Ground surface above tank was and is paved. At the time of tank excavation, the pavement exhibited a minimum of cracks and separations. Soils immediately below the paving and above as well as around the tank appeared to be fairly consistent in texture and color (medium brown). No evidence of any spills or soil contamination existed around the tank other than a minor discoloration of the soil area immediately around the filler neck of the tank. A sample of soil was taken from near the filler and analyzed in the field by use of a portable hydrocarbons detector. The instrument did not register the presence of hydrocarbons.

Los Angeles County
Department of Public Works
Waste Management Division

Closure Report con't (Closure Permit No. 3157-B)
Page 3

A clay layer was found at approximately 2.5 to 3 feet below the tank. This layer was left undisturbed. The soil above this layer appeared normal in color, had no noticeable odor, nor did it contain noticeable moisture.

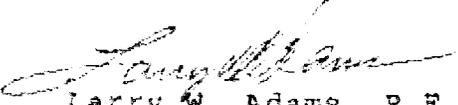

Soils from immediately above the clay were also checked with a portable hydrocarbons tester with no hydrocarbons being detected.

- (12) Based on the levels of petroleum hydrocarbons reported to be contained in the soil samples, it is recommended that remedial action to mitigate contamination at this site is not required. It is recommended that the Contractor be authorized to backfill the excavations.

Please feel free to contact the undersigned if there are any questions concerning the above Closure Report.

Respectfully submitted,

ADDITIONAL CLOSURE REQUIREMENTS

The additional information or requirements checked below must be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 4089, Los Angeles, CA 90061, in order to complete the evaluation of Closure Permit No. 91579.

- Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
- Insufficient number of samples were obtained. Additional samples required in accordance with attached Closure Permit Requirements.
- Describe method of obtaining, handling, and/or transporting samples.
- Indicate time and date samples were obtained.
- Submit logs certified by a CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils for all borings.
- Submit chain-of-custody documentation initiated by person obtaining sample through person at DOHS certified laboratory.
- Disposal destination of tanks and evidence of legal disposal.
- Analysis results by a State certified laboratory shall be submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
- Documentation as to depth of groundwater at facility.
- Manifests to document hazardous waste disposal of removed soil.
- Signature on the report is required of CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils.
- Define the vertical and lateral extent of contamination.
- Propose a remedial action plan to mitigate contamination.
- Other _____

RE: Notice of Noncompliance date 3-23-89

1 hr
After open Circuit

Dear Ms. Long:

Per our telephone conversation on today's date, I am sending you a copy of a letter issued by Kent & Sons Landclearing Inc. with regards to the proper disposal of our 10,000 gallon gasoline tank.

According to their letter, the tank was disposed of on or about September 9, 1987.

If you have any further questions, please call me at the above number. Thank you.

Sincerely,

Richard P. Bryant

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE PERMIT NO. 3157B
FACILITY LOCATION: 8420 S. Atlantic Blvd.

This office has reviewed the soil/groundwater assessment report/letter submitted on October 27, 1989 required as a part of the subject closure procedure. Based on the information submitted, we find that:

- [X] The closure is final and no further action is required.
[] The soils removed during the tank excavation are unrestricted and may be used as backfill material. The closure is final and no further action is required.
[] Excavated soils may be a hazardous waste and are not suitable for fill material or disposal on-site. Contaminated soils must be manifested, transported and disposed of pursuant to Chapter 6.5, California Health and Safety Code, unless evidence is presented indicating that disposal is proper at a less restricted facility. Copies of completed manifests or other appropriate evidence indicating legal disposal shall be submitted to this office before this project can be considered closed.
[] The permanent closure of the tank(s) in place shall comply with requirements set by the local Fire Department. Verification must be submitted to this office indicating proper closure and completion of all work.
[] Other

Any tanks exist at 4827 or 4819 Patata St.?
Special Instructions Investigate

REPORT: (Narrative description of observations including physical condition of site, types of materials and chemicals, trade names, extent of waste flow, damage observed, statements of witnesses, preventive measures taken, location of sample points and directives given to alleged discharger.)

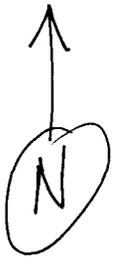

On Tues Apr. 6, 1992, I investigated the site. I immediately went to the main offices of M. Stephens Mfg. located at 8420 S. Atlantic Bl. Mr. Sam Friedman welcomed me and asked what I needed to know or investigate. I explained to him the nature of my visit and he proceeded to explain some discrepancies with my files. First, 8420 Atlantic (I-877-2y) & 4839 Patata (I-11513-2y) are owned by the same corporation (M. Stephens Mfg.). Second, 1-10,000 gal tank was removed from (I-877-2y) and 1-1500 & 1-500 gal tank were removed from (I-11513-2y). No other tanks exist at these sites or any other neighboring sites such as 4827 or 4819 Patata.

The Owner/operator of both sites is M. Stephens Mfg. Inc (OVER)

Dennis Barden
Plant Manager
M. STEPHENS MANUFACTURING
8420 S. Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Barden :

**Violation Notice No. 14195, Violation of EPA Standards and of
Sanitation Districts' Industrial Wastewater Discharge Regulations**

Enclosed is a copy of Violation Notice No. 14195 which was issued to M. STEPHENS MANUFACTURING on June 17, 1997, as a result of a violation of requirements established in the Sanitation Districts' Industrial Wastewater Ordinance. In one or more instances, wastewater discharged from your facility was also determined to be in violation of the Federal EPA Pretreatment Standards, 40 CFR, Part 433. The nature of noncompliance is outlined on the Violation Notice along with a required date of correction. This notice was formally received by you.

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' Wastewater Ordinance. If violations are not corrected the Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$25,000 a day for each violation. It is hoped that the attached Violation Notice will serve to expedite compliance.

As part of the Sanitation Districts' enforcement follow-up procedure your company is required to submit a written report no later than July 25, 1997. The report should describe the cause of the violation and outline corrective actions, implemented or proposed, which will prevent future violations. Failure to comply with this requirement will result in escalated enforcement action. If your company has already submitted a written response and/or information requested, please ignore this requirement.

If you have any further questions regarding this matter please contact Enforcement Project Engineer Ken Vasquez at extension 2961.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

Charles W. Carry

NOTES
1/
2/

Report all critical parameters required by the Sanitation Districts and any other critical parameter known to be present in the wastewater. Those parameters required by the Districts but known to be absent from the wastewater may be reported by placing the word absent in the appropriate space.

If values are obtained by measurements or analyses write A in this column. Analysis values must be determined, using representative 24-hour composite samples, by a State Certified or Districts Approved Laboratory. If values are obtained by estimate, write E in this column. Estimated values are acceptable for new plants only.

Dear Mr. Tolleson:

Violation of the EPA Monthly Average Effluent Discharge Limit

Your company is subject to the established EPA Categorical Pretreatment Standards for both daily maximum and monthly average effluent discharge limits. A review of your company's and/or the Districts' effluent monitoring data indicates that during September 1999, your company violated the effluent discharge limit(s) as indicated below.

Date	Sample Result(s) (mg/l) */**	Pollutant	Monthly Average Result (mg/l)	Monthly Average Limit (mg/l)
09-22-1999	4.400**	Zinc	4.400	1.480

* Co: Company sample

** CSD: CSD sample

The average value of the samples taken in a calendar month constitutes the monthly average. This average is compared with the monthly average limit.

Your company is advised to operate and maintain the existing pretreatment system with the ultimate goal of complying consistently with the more stringent monthly average discharge limits. Any future violations of the established monthly average effluent discharge limits may result in escalated enforcement action. **A written response is not required for the violation(s) indicated above.**

The Districts appreciate your continued attention and commitment to achieving compliance with all wastewater discharge regulations. If you have any further questions regarding this matter please contact Enforcement Project Engineer Harry Mehta at extension 2903.

Very truly yours,

Charles W. Carry

Cudahy, CA 90201

Dear Mr. Tolleson:

Notice of Violation No. 17929, Violation of Industrial Wastewater Discharge Regulations

Enclosed is a copy of Notice of Violation No. 17929 which was issued to **M. STEPHENS MFG** on March 15, 2000 as a result of a violation of requirements established in the Sanitation Districts' *Wastewater Ordinance*. The nature of noncompliance is outlined on the Notice of Violation along with a required date of correction. This notice was formally received by Dennis Borden, Plant Manager.

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' *Wastewater Ordinance*. If violations are not corrected the Sanitation Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$25,000 a day for each violation. It is hoped that the attached Notice of Violation will serve to expedite compliance.

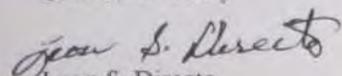

On March 16, 2000, in response to Notice of Violation No. 17929, the Sanitation Districts received M. Stephens Mfg.'s written response. Since Notice of Violation No. 19654 was issued prior to the Districts' January 28, 2000 letter re-categorizing the company and consequently modifying the effluent limits it was expected that a written response to V19654 would be submitted. Receipt of the March 16, 2000 letter is deemed an acceptable response to V17929 and V19654, and therefore the Districts will consider these enforcement actions closed.

If you have any questions regarding this matter, please contact Enforcement Project Engineer Rob Wienke at extension 2905.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

Charles W. Carry

Dear Mr. Tolleson:

**Notice of Violation No. 17919, Violation of
Industrial Wastewater Surcharge Regulations**

Enclosed is a copy of Notice of Violation No. 17919 which was issued to **M. STEPHENS MFG** on February 16, 2000 as a result of a violation of requirements established in the Sanitation Districts' *Wastewater Ordinance*. The nature of noncompliance is outlined on the Notice of Violation along with a required date of correction. This notice was formally received by Dennis Borden, Plant Manager.

The Districts' Ordinance requires dischargers within the Districts to pay an annual industrial wastewater surcharge payment if the costs incurred to treat their wastes exceeds the amount of revenue derived from their ad valorem taxes. Your company was not in compliance with this requirement when the Violation Notice was issued.

All companies filing a Long Form Surcharge Statement are required to make three quarterly estimated prepayments during the fiscal year. The quarterly payments are due on:

- September 30
- December 31
- March 31

These payments are in addition to the final payment (fourth quarter) due **August 15th**, which accompanies the annual surcharge statement. Short Form and User Charge Statements and payments are submitted only once a year (August 15th).

When our office receives the required surcharge submittal and/or payment and the Districts' Surcharge Group finds the submittal satisfactory, the violation outlined in the Notice of Violation will be considered corrected.

If you have any further questions regarding this matter, please contact Enforcement Project Engineer Robert Wienke at extension 2905.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

Charles W. Carry

Account No: 2024383

Mr. Steve Shaul
President
M. STEPHENS MFG.
8420 Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Shaul:

Compliance Agreement Meeting Notice of Violation No. 14663

Enclosed is a copy of Notice of Violation No. 14663 which is being issued to M. STEPHENS MFG. on April 14, 2003 as a result of continued violations of requirements established in the Sanitation Districts' *Wastewater Ordinance*. The nature of noncompliance is outlined on the Notice of Violation.

Because of the recurring violation(s) of the Sanitation Districts' *Wastewater Ordinance*, a mandatory meeting is necessary between the Enforcement office and the Surcharge Group of the Districts' Industrial Waste Section and representatives of your company.

A mandatory compliance meeting with Robert M. Wienke has therefore been set for **April 24, 10 a.m. at 10:00 a.m.** at the Districts' Joint Administration Office at 1955 Workman Mill Road, Whittier, California. It is mandatory that a responsible company official be present at this meeting. The Districts will not meet solely with an outside consultant. The enclosed Discharger Identification Questionnaire is required to be completed and hand carried to this scheduled meeting. It is hoped that the results of this meeting will negate any requirement for future enforcement actions.

If you have any further questions regarding this matter, please contact Enforcement Project Engineer Robert M. Wienke at extension 2905.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

James F. Stahl

M. STEPHENS MFG.
8420 Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Shaul:

Self-Monitoring Report Delinquency

According to the Districts' records, M. STEPHENS MFG. has the following delinquent Self-Monitoring Reports (SMR) that have not been received by the Districts:

07/01/01 to 12/31/01

All delinquent SMRs must be submitted immediately. They must be completed, signed, and submitted with the original laboratory analytical results.

A Notice of Violation(s) has already been issued to M. STEPHENS MFG. for the delinquent SMR(s). Failure to comply with the requirements of this letter will result in referral to the Districts' legal counsel for initiation of civil action.

If you have any further questions regarding this matter, please contact Enforcement Project Engineer Gilbert Chang at extension 2963.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

James F. Stahl

Dear Mr. Tolleson:

Self-Monitoring Report Delinquency

According to the Districts' records, **M. STEPHENS MFG** has the following delinquent Self-Monitoring Reports (SMR) that have not been received by the Districts:

01/01/99 to 06/30/99

All delinquent SMRs must be submitted immediately. They must be completed, signed, and submitted with the original laboratory analytical results.

A Notice of Violation(s) has already been issued to **M. STEPHENS MFG** for the delinquent SMR(s). **Failure to comply with the requirements of this letter will result in referral to the Los Angeles County Districts Attorney's Office for civil prosecution.**

If you have any further questions regarding this matter, please contact Enforcement Project Engineer Gilbert Chang at extension 2963.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

Charles W. Carry

CHARLES W. CARRY
Chief Engineer and General Manager

March 30, 2000
File: 02-00-9122Y
Account No. 1874450

Richard Hoffman
Royal Truck Body
4001 S. Garfield Ave.
Paramount, CA 90723

Dear Mr. Hoffman:

Industrial Wastewater Discharge Permit No. 9122

C-284292

An inspection of your facility indicates your company applies a phosphate solution onto metal truck bodies prior to being painted. This application is a phosphate coating operation which is subject to the Metal Finishing Category. The Metal Finishing regulations (40 CFR 433.10(a)) "apply to plants which perform any of the following six metal finishing operations **on any basis material**: Electroplating, Electroless Plating, Anodizing, **Coating** (chromating, phosphating, and coloring), Chemical Etching and Milling, and Printed Circuit Board Manufacturing. If any of those six operations are **present**, then this part (regulation) applies to discharges from any process operations captured under the metal finishing regulation (there are 40 operations in all). Based upon the applicability statement, Royal Truck Body is subject to the Metal Finishing regulation because there is discharge from the phosphate application procedure which falls under the Coating operation. Therefore, Royal Truck Body is required to comply with the Metal Finishing regulations which promulgates pretreatment standards for your discharge.

Companies subject to categorical pretreatment standards are classified as Significant Industrial Users (SIUs). Federal regulations require that all SIUs perform self-monitoring for all federally regulated parameters and for those parameters deemed necessary by the local Control Authority (the Districts). Therefore, Royal Truck Body must comply with the following self-monitoring reporting requirements

Self-monitoring of the industrial wastewater must be performed at the intervals indicated on the enclosed Self-Monitoring Requirement Form and reported on the Self-Monitoring Report (SMR) form. The Districts will send the necessary SMR forms before each reporting period. All indicated analyses must be performed by a State or Sanitation Districts' certified laboratory. The certification section of the SMR form must be completed and signed by a responsible company official. For each reporting period, the completed SMR form and the corresponding laboratory report must be submitted to the Districts' Industrial Waste Section no later than the due date indicated on the form. The wastewater samples analyzed must be collected in such a way that they are representative of the total discharge generated by a typical day's operations. Each representative sample (composite and/or grab) should be collected over one 24-hour period and analyzed for all parameters in Table 1 of the Self-Monitoring Requirements form. All representative samples must meet all applicable limits. It is your responsibility to submit results from any additional self-monitoring, and to notify the Districts of any other toxic materials which are known to be present in the wastewater.

The samples must be collected from the sample box. The methods of collection shall be as indicated on the enclosed SMR form.

Companies subject to EPA regulations under 40 CFR 433 (Metal Finishing) are required to show compliance with TTO limitations by monitoring for TTO compounds or to operate under a toxic organic management plan (TOMP) approved by the Districts. Royal Truck Body does not have an approved TOMP Toxic Organic Summary listing the regulated toxic organic compounds stored or used at the facility. Therefore, Royal Truck Body is required to monitor the discharge for TTO compounds as indicated in the Self-Monitoring Requirements form. At a future date your company may determine that a TOMP would be acceptable in lieu of TTO monitoring. A TOMP could then be submitted to the Districts for review, and upon approval the TTO monitoring requirements would be altered. To reduce, but not completely eliminate TTO monitoring, your company may choose to submit a Toxic Organic Summary for Districts' approval. Please refer to the enclosed question and answer sheet and document entitled Total Toxic Organics - Monitoring Requirements and Toxic Organic Management Plans for an explanation of these options and their benefits. Royal Truck Body is encouraged to apply for one of the alternate monitoring options.

Pursuant to federal regulations outlined in 40 CFR Part 403.8, all Industrial Wastewater Discharge Permits for Significant Industrial Users are required to be renewed every five (5) years. As such, you are hereby required to submit an Industrial Wastewater Discharge Permit application for reevaluation of your facility. The submittal must contain all required supporting information and plans as detailed in the enclosed Information and Instructions for Obtaining an Industrial Wastewater Discharge Permit (instruction booklet). Please submit the requested documentation within 60 days of the date of this letter, to:

Ms. Nardy Drew
Dept. of Public Works
P.O. Box 1460
Alhambra, CA 91802-1460

If you have any questions concerning this matter, please contact Alicia Jauregui of the Sanitation Districts' Industrial Waste Section at extension 2918.

Very truly yours,

Charles W. Carry

Richard Wozniak, Plant Manager
M. STEPHENS MANUFACTURING
8420 S. Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Wozniak:

Violation of the EPA Monthly Average Effluent Discharge Limit

Your company is subject to the established EPA Categorical Pretreatment Standards for both daily maximum and monthly average effluent discharge limits. A review of your company's and/or the Districts' effluent monitoring data indicates that during April 1995, your company violated the effluent discharge limit(s) as indicated below.

Date	Sample Result(s) (mg/l)	Pollutant	Monthly Average Result (mg/l)	Monthly Average Limit (mg/l)
04/19/95	CSD: 1.940	Zinc	1.940	1.480

The average value of the samples taken in a calendar month constitutes the monthly average. This average is compared with the monthly average limit.

Your company is advised to operate and maintain the existing pretreatment system with the ultimate goal of complying consistently with the more stringent monthly average discharge limits. Any future violations of the established monthly average effluent discharge limits may result in escalated enforcement action. **A written response is not required for the violation(s) indicated above.**

The Districts appreciate your continued attention and commitment to achieving compliance with all wastewater discharge regulations. If you have any further questions regarding this matter please contact Enforcement Project Engineer Harry Mehta at extension 3516.

Very truly yours,

Charles W. Carry

OFFICE COPY

Dear Mr. Gaur:

Industrial Wastewater Discharge Permit No. 10575 R-1

Bryant Die Cast Company
8420 S. Atlantic Ave.
Cudahy, CA 90201

I-877-2Y

Enclosed are four (4) approved sets of plans and copies of the approved Industrial Wastewater Discharge Permit for the subject company. This permit application was submitted in accordance with Ordinance requirements to apply for a permit revision upon a substantial increase in wastewater quantity. Please review these for compliance with your requirements, and retain the copies you require for your files. The Applicant's copy of the approved plans and Industrial Wastewater Discharge Permit, along with a copy of this letter and requirement list, should be forwarded to the applicant. A copy of this letter is forwarded to the applicant to notify him of the Sanitation Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Sanitation Districts for our records. The approved plans consist of:

1. Facility Plot Plan
2. Dwg. No. F3874A: Powder Coating Line
3. Dwg. No. F3874C: Three Stage Washer
4. Dwg. No. F3874D: Washer Tank Detail

Approval of the plans and permit is contingent upon continuing compliance with applicable Sanitation Districts' Ordinance requirements, upon any corrections shown in red on the drawings, and upon the items indicated on the attached requirement list.

Per your telephone conversation with Suzanne Wienke you have been notified that the flowrate for the subject company is higher than was originally stated.

Mr. Shiv Gaur

Charles W. Carry, Chief Engineer and General Manager
1955 Workman Mill Road, P.O. Box 4998, Whittier, California 90607

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

Company Name: Bryant Die Cast Company

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO: 10575 R-1

DATE OF APPROVAL: May 9, 1988

The above named company is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. This approval is a revision to Industrial Wastewater Discharge Permit No. 10575 issued on August, 13, 1984.
2. Characterization tests of the industrial wastewater must be performed at the intervals indicated on the Required Characterization Tests form and reported on the enclosed Critical Parameter Report Form. All indicated analyses should be performed by a Sanitation Districts' approved laboratory. The certification section on the back of the Critical Parameter Report Form must be completed and signed by a responsible company official.

Any organic chemicals listed on the enclosed Appendix A that are believed to be present in the wastewater must be analyzed and reported under the Total Toxic Organic characterization test requirement.

Revision of the Required Characterization Tests may be considered after initial analyses and upon written request with valid supporting information from the subject company. It is the responsibility of the subject company to report analyses of any other toxic materials shown in the Critical Parameter List, which are known to be present in the wastewater.

3. The pH of the wastewater must be maintained above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not violated. The pH equipment must be regularly calibrated and maintained in good working order. At least 180 days of pH records must be filed at the discharge address and must be made available for inspection by representatives of the Sanitation Districts at any time during business hours. If pH records indicate periods of acidic or highly alkaline discharge, the applicant may be required to install a pH controlled neutralization system. Batch neutralization is required for any tanks containing acidic solutions before they are discharged to the sewer, if the solution pH is less than 6.0.

4. The existing sampling box is hereby designated as the legal sampling point for the subject company. The permittee is responsible for maintaining and cleaning the sampling point to prevent any build-up of oil and grease, sediment or sludge; failure to do so does not invalidate sampling test results. Analytical results from samples taken from this location according to accepted sampling procedure shall be accepted as binding. Safe and convenient access to the sampling point must be provided for representatives of the Sanitation Districts.
5. The Sanitation Districts are required by law to enforce the Categorical Pretreatment Regulations established by the United States Environmental Protection Agency. Based on information submitted to the Districts, the permittee is subject to pretreatment standards for new sources in the Metal Finishing Category (40 CFR 433). The permittee must be in compliance with these limits upon commencement of discharge. A copy of the pretreatment standards is enclosed with the applicant's copy. The permittee is advised that any discharge in excess of these standards requires corrective action by the discharger. Penalties applicable to violation of these limits will be strictly enforced by the Sanitation Districts.

For industrial pollutants not regulated by the EPA regulation or where the EPA regulation is less stringent than those of the Sanitation Districts, the Districts will continue to enforce its effluent limitations. The subject EPA regulations do not authorize any violations of the Districts' regulations. The Districts' maximum concentration limits (for any wastewater effluent sample) for certain toxic materials are shown in the enclosed table of "INDUSTRIAL WASTEWATER EFFLUENT LIMITATIONS".

6. The spill containment for the proposed washer and for the existing washer must be changed so that the bottom drains and overflows from tanks 1 and 3 do not discharge directly over the floor sinks. The overflows and bottom drains must drain inside of the spill containment berm and the floor sinks must be located outside of the spill containment berm. Flexible hosing may be used when emptying the contents of the neutralized tanks.
7. This approval of the proposed spill containment system by the Sanitation Districts is for only the general concept presented. The proper construction and maintenance of the system is the responsibility of the permittee and his contractors.
8. Under no circumstances shall process solution spills be discharged to the sewer. Unreclaimed or untreated process solution spills shall be hauled to a legal disposal site.
9. When spill containment walls or dikes are constructed on existing concrete or masonry, the contact mortar or concrete shall be bonded to the existing surface and all joints shall be sealed with acid resistant sealant or materials.

10. The proposed spill containment system shall be completed within 60 days of the date of this letter.
11. The Sanitation Districts shall be notified in writing as soon as the spill containment system is complete, or if any construction changes are contemplated that substantially revise information given on previously approved plans.
12. The permittee must keep a log book for spill containment that must be made available to Districts' employees during business hours. The log book must contain the following information:
 1. Date and time of the spill.
 2. Name of material that was spilled.
 3. Quantity (volume) of spill.
 4. Cause of spill.
 5. Method of disposal.
 6. Corrective action to prevent spills from reoccurring.

This log book pertains to all materials removed from spill containment areas.

13. The permittee is required to continue the regular interceptor maintenance and cleaning at intervals frequent enough to prevent a build-up of grit, oil, or grease which may enter the sewer.
14. Waste haulers reports must be obtained and kept on file for a period of at least 180 days for any liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Sanitation Districts upon request.
15. A new permit application must be submitted when there is a significant change in wastewater quantity (25% or more) or quality from that given in the approved permit information. The completed application should be submitted to the local governmental agency for initial processing prior to Sanitation Districts' review. Approval must be obtained prior to any construction of new facilities.
16. The permittee is required to notify the Sanitation Districts of any change in the status of the subject facility, if ownership or operating responsibility changes, or if the industrial waste connection is legally abandoned.

SANITATION DISTRICTS OF LOS ANGELES COUNTY

INDUSTRIAL WASTE SECTION

REQUIRED WASTEWATER CHARACTERIZATION TESTS

Name Bryant Die Cast Company Permit No. 10575 R-1
 Address of Property 8420 S. Atlantic Avenue Date May 9, 1988
 Producing Wastewater Cudahy, CA 90201
 Discharge S.I.C.No. 3479
 Frequency of Analyses Once every 6 months 1/ Flow 2.2 Million Gal/Yr

The following analyses and flow measurements shall be reported at the indicated frequency to Sanitation Districts on the Districts' Critical Parameter Report Form (copy attached), which must be signed by an administrative officer of the company. Certain requested characterization tests may be deleted from future reports, if it can be demonstrated in writing that they exist in very minute amounts in the wastewater and are not used in any processes which generate wastewater.

Ident. Code	Test <u>3/</u>	Ident. Code	Test <u>3/</u>
A	Flow (Total) <u>2/</u>		
XXXXXXXXXX	XXXXXXXXXX <u>2/</u>		
C	COD		
D	SS (Suspended Solids)		
E	pH		
H	Sulfide - Dissolved		
FF	Zinc- Total		
GG	Oil & Grease		

- 1/ Companies required to submit only annual characterization analysis data should submit it directly to the Districts on July 1; companies required to submit data every 6 months should submit data on January 1, and July 1; companies required to submit data every 3 months should submit data on January 1, April 1, July 1, and October 1. Required industrial wastewater characterization analysis data not received within 45 days of the required date will be considered delinquent and a possible cause for revocation of the Industrial Wastewater Discharge Permit.
- 2/ Total Flow and maximum 30-minute peak flow rate for the day when composite characterization sample is taken.
- 3/ It is the responsibility of the subject company to report analyses of any other toxic materials shown on the Critical Parameter Report Form, which are known to be present in the wastewater, or may occur in the wastewater as a result of a process change.
 * Grab samples should be acquired with precautions taken to insure that volatile constituents are preserved.

SANITATION DISTRICTS OF LOS ANGELES COUNTY

TABLE OF SURCHARGE TEST FREQUENCY

YEARLY CUMULATIVE FLOW		Required Frequency of Tests for Surcharge Parameters (Critical Parameters A, B, C, D) <u>1/</u> (Flow, Peak Flow, COD and Suspended Solids, respt.)
Million Gallons	Million Cubic Feet	
Less than 6.0	Less than 0.80	0 <u>2/</u>
6.0 to 15.0	0.80 to 2.00	1 per 6 Months
15.1 to 36.0	2.00 to 4.80	1 per 3 Months
36.1 to 250	4.80 to 33.33	1 per Month
Over 250	Over 33.33	1 per Week

NOTES:

- 1/ Companies having peak flows of 100 gallons per minute or more or total flows of 50,000 gallons per working day or more must provide a continuous automatic indicating, totalizing and recording or total industrial wastewater flows discharged.
- 2/ Companies with cumulative yearly flows less than 6.0 million gallons may determine surcharge parameters for use in the "Long Form" Surcharge Statement or may pay for discharge at the current flat rate charge per million gallons used in the "Short Form" Surcharge Statement and not test for surcharge parameters. At least two determinations of the surcharge parameters must be made to furnish data for use in the "Long Form" Surcharge Statement.

1/ Report all critical parameters required by the Sanitation Districts and any other critical parameter known to be present in the wastewater. Those parameters required by the Districts but known to be absent from the wastewater may be reported by placing the word absent in the appropriate space. Test procedures must be in accordance with procedures contained in the current edition of STANDARD METHODS, if applicable. Test procedures for priority organics must be run in accordance with the appropriate EPA method.

2/ If values are obtained by measurements or analyses write A in this column. Analysis values must be determined, using representative 24-hour composite samples (unless the parameter is identified by footnote 4/), by a State Certified or Districts Approved Laboratory. If values are obtained by estimate, write E in this column. Estimated values are acceptable for new plants only.

3/ Report flow rates for sampling day.

4/ Grab samples should be acquired with precautions taken to insure that volatile constituents are preserved.

Dear Mr. Torabzadeh:

Industrial Wastewater Discharge Permit No. 10575

M Stephens Mfg Co
8420 S Atlantic Ave
Cudahy CA 90201

Effective immediately, Industrial Wastewater Discharge Permit No. 10575 is void for the following reason:

Change in ownership to M. Stephens Mfg. The owner has been issued Temporary Permit No. 14831.

Very truly yours,

Charles W. Carry

M. STEPHENS MANUFACTURING
8420 S. Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Palmer:

Notice of Violation No. 11905, Violation of Industrial Wastewater Discharge Regulations

Enclosed is a copy of Notice of Violation No. 11905 which was issued to M. STEPHENS MANUFACTURING on March 25, 1996 as a result of a violation of requirements established in the Sanitation Districts' Wastewater Ordinance. The nature of noncompliance is outlined on the Notice of Violation along with a required date of correction. This notice was formally received by you.

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' Wastewater Ordinance. If violations are not corrected the Sanitation Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$25,000 a day for each violation. It is hoped that the attached Notice of Violation will serve to expedite compliance.

As part of the Sanitation Districts' enforcement follow-up procedure your company is required to submit a written report no later than May 02, 1996. The report should describe the cause of the violation and outline corrective actions, implemented or proposed, which will prevent future violations. Failure to comply with this requirement will result in escalated enforcement action. **If your company has already submitted a written response, please ignore this requirement.**

If you have any questions regarding this matter, please contact Enforcement Project Engineer Ken Vasquez at extension 2961.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,
Charles W. Carry

Steve Shaul
President
M. STEPHENS MFG.
8420 Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Shaul:

**Notice of Violation No. 21668, Violation of
Industrial Wastewater Discharge Regulations**

Enclosed is a copy of Notice of Violation No. 21668 which was issued to M. STEPHENS MFG. on August 12, 2002 as a result of a violation of requirements established in the Sanitation Districts' Wastewater Ordinance. The nature of noncompliance is outlined on the Notice of Violation along with a required date of correction. This notice was formally received by Dennis Borden, Plant Manager.

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' Wastewater Ordinance. If violations are not corrected the Sanitation Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$25,000 a day for each violation. It is hoped that the attached Notice of Violation will serve to expedite compliance.

Full compliance with your discharge permit requires that your company perform and submit semi-annual Self Monitoring Reports (SMR). This deficient SMR was required because the SMR's lab results were in a prior report.

If your company has already sampled and analyzed for the parameter(s) required by the deficient SMR(s), but has neglected to submit the results to the Districts, no further sampling is necessary. However, the appropriate attached SMR must be completed and submitted along with laboratory results, directly to the Sanitation Districts, attention Gilbert Chang, immediately.

If this sampling has not been done, your company is required to perform one (1) day of self-monitoring sampling. This sample must be analyzed for all required self-monitoring parameters and the analytical results must be entered on the appropriate SMR form. The required report must be completed and submitted directly to the Sanitation Districts, attention Gilbert Chang. All current and future SMRs must be submitted during their specific reporting period, directly to the Sanitation Districts, attention Luz Avila.

CLOSURE AUTHORIZATION SUPPLEMENT
ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
300 SOUTH FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Authorization

Number: 401275

File Number: 100877

To satisfy the permanent closure requirements for the removal/closure of the industrial waste pretreatment facilities indicated on your closure authorization, compliance with conditions listed on the reverse side of the authorization is necessary.

A site investigation including the following items is required:

1. Remove the contents of the sample box, clarifier, pretreatment facility, and/or injection well, as well as any visibly contaminated soil. Determine appropriate disposal methods for all removed materials based on the results of the sample analyses. The owner/operator is ultimately responsible for proper disposal of all wastes, and should carefully review all arrangements for disposal to ensure compliance with Federal, State, and local regulatory requirements. You are further directed to furnish this office with evidence of legal disposal for all such wastes in the form of completed hazardous waste manifests, or other appropriate documents.
2. To satisfy the permanent closure requirements for the industrial waste pretreatment facility, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved closure plan.
3. Samples shall be obtained at depths of two to three feet below the clarifier, or other below grade pretreatment facility.
4. Soil samples shall be obtained at the center of the bottom of the injection well or at 20-foot intervals along the perimeter of the leach field, if any. The number and location of soil samples shall be sufficient in quantity and nature to accurately define the vertical and lateral extent of contamination or confirm that no unauthorized release has taken place.
5. Samples shall be obtained at depths of two to three feet below piping from the clarifier to the injection well or leach field, if any, at 20-foot intervals.
6. All samples shall be analyzed by a California Department of Toxic Substance Control Certified laboratory equipped for the type of analysis to be conducted. Samples must be analyzed individually without composition. All of the soil samples shall be analyzed for the following checked items:

EPA Method 8260B (Volatile Organics)

- EPA Method 8270C (Semi-volatile Organics) when the presence of volatile organics is suspected of being in the waste stream.

EPA 6000 Series Methods for all metals on the Toxicity Characteristics list (arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver).

- Total Petroleum Hydrocarbons (TPH), using EPA Sampling Method 5035 (purge and trap) for the EPA Method 8015(M) contaminants (Non-Halogenated Volatile Organics). This analysis is required for all non-oxygenated fuels.

- Total Petroleum Hydrocarbons (TPH), and Methyl Tertiary Butyl Ether (MTBE), using Sampling Method 5035 (purge and trap) for the EPA Method 8260B contaminants (Non-Halogenated Volatile Organics). This analysis is required for all oxygenated fuels.

- Total Recoverable Petroleum Hydrocarbons (TRPH) – EPA Method 418.1 or EPA Method 1664A.

PH using EPA Method 9045.

- Cyanide using appropriate EPA Method.

7. A background sample shall be obtained at a location not influenced by the industrial waste pretreatment facilities, and shall be analyzed for all the above pollutants to establish background levels.

8. If groundwater is encountered at any time during the site assessment, a groundwater monitoring well shall be established at a downgradient location. A permit for either the construction or destruction of a groundwater monitoring well is required from the Los Angeles County Department of Health Services. After proper development (four well volumes minimum), a groundwater sample shall be obtained and analyzed for past constituents of the unauthorized discharge and results reported as parts per billion.

INSPECTION NOTIFICATION REQUIREMENTS

under the California Water with
pursuant to Los Angeles County Code, Section 20.36.220, and the Conditions and Limitations of
the attached Industrial Wastewater Pretreatment Facilities Closure Authorization, you are required
to complete the following notifications indicated below within the time period specified prior to
commencement of work on this closure.

ALL REQUIRED PLUMBING AND/OR SEWER ABANDONMENT PERMITS, SHALL BE OBTAINED FROM THE BUILDING OFFICIAL (APPROPRIATE CITY OR COUNTY) PRIOR TO CAPPING ANY DRAINS, SEWER OR PRIVATE SEWER SYSTEM.

Tom Tolleson
Director of Manufacturing
M. STEPHENS MFG.
8420 Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Tolleson:

**Violation Notice No. 19654, Violation of EPA Standards and of
Sanitation Districts' Industrial Wastewater Discharge Regulations**

Enclosed is a copy of Violation Notice No. 19654 which was issued to M. STEPHENS MFG. on December 17, 1999, as a result of a violation of requirements established in the Sanitation Districts' Industrial Wastewater Ordinance. In one or more instances, wastewater discharged from your facility was also determined to be in violation of the Federal EPA Pretreatment Standards, 40 CFR, Part 433. The nature of noncompliance is outlined on the Violation Notice along with a required date of correction. This notice was formally received by Dennis Barden.

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' Wastewater Ordinance. If violations are not corrected the Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$25,000 a day for each violation. It is hoped that the attached Violation Notice will serve to expedite compliance.

As part of the Sanitation Districts' enforcement follow-up procedure your company is required to submit a written report no later than February 7, 2000. The report should describe the cause of the violation and outline corrective actions, implemented or proposed, which will prevent future violations. Failure to comply with this requirement will result in escalated enforcement action. **If your company has already submitted a written response and/or information requested, please ignore this requirement.**

If you have any further questions regarding this matter please contact Enforcement Project Engineer Harry Mehta at extension 2903.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,
Charles W. Carry

Cudahy, CA 90201

Dear Mr. Tolleson:

Notice of Violation No. 19653, Violation of Industrial Wastewater Discharge Regulations

Enclosed is a copy of Notice of Violation No. 19653 which was issued to M. STEPHENS MFG. on December 29, 1999 as a result of a violation of requirements established in the Sanitation Districts' *Wastewater Ordinance*. The nature of noncompliance is outlined on the Notice of Violation along with a required date of correction. This notice was formally received by Dennis Barden.

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' *Wastewater Ordinance*. If violations are not corrected the Sanitation Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$25,000 a day for each violation. It is hoped that the attached Notice of Violation will serve to expedite compliance.

Full compliance with your discharge permit requires that your company perform and submit semi-annual Self-Monitoring Reports (SMR). The SMR referenced on the attached copy of the Notice of Violation has not been submitted by your company.

If your company has already sampled and analyzed for all the parameters of the SMR during the period in question, but has neglected to submit the results to the Districts, no further sampling is necessary. However, the appropriate SMR must be completed and submitted directly to the Sanitation Districts, attention Gilbert Chang, immediately.

If this sampling has not been done, your company is required to perform one (1) day of self-monitoring sampling. This sample must be analyzed for all required self-monitoring parameters and the analytical results must be entered on the appropriate SMR form. The required report must be completed and submitted directly to the Sanitation Districts, attention Gilbert Chang. All current and future SMRs must be submitted, during their specific reporting period, directly to the Sanitation Districts, attention Cynthia Black.

Dear Mr. Tolleson:

Compliance Agreement Meeting

A review of your company's enforcement history indicates recurring violations of the Sanitation Districts' *Wastewater Ordinance*. Because of the seriousness of these violations, the Districts have determined that a mandatory compliance meeting is necessary between the Enforcement Office of the Districts' Industrial Waste Section and representatives of your company.

A compliance meeting with Gilbert Chang has therefore been set for July 13, 1999 at 10:00 AM at the Districts' Joint Administration Office at 1955 Workman Mill Road, Whittier, California. It is mandatory that a responsible company official be present at this meeting. The Districts will not meet solely with an outside consultant. It is anticipated that the following items will be discussed:

- (A) Details regarding recent wastewater violations.
- (B) The significance of these violations.
- (C) Procedures for remedial action to achieve compliance.
- (D) The compliance schedule for your company.

It is recommended that your company be prepared to present a proposal regarding Items C and D at this meeting. This proposal should consist of technical drawings and pertinent supporting information. The enclosed Discharger Identification Questionnaire is required to be completed and hand carried to this scheduled meeting. It is hoped that the results of this meeting will negate any requirement for future enforcement actions.

If you have any further questions regarding this matter, please contact Enforcement Project Engineer Gilbert Chang at extension 2963.

Dear Mr. Barden :

Self-Monitoring Report Delinquency

According to the Districts' records, M. STEPHENS MANUFACTURING has the following delinquent Self-Monitoring Reports (SMR) that have not been received by the Districts:

01/01/97 to 06/30/97

All delinquent SMRs must be submitted immediately. They must be completed, signed, and submitted with the original laboratory analytical results.

A Notice of Violation(s) has already been issued to M. STEPHENS MANUFACTURING for the delinquent SMR(s). Failure to comply with the requirements of this letter will result in referral to the Los Angeles County Districts Attorney's Office for civil prosecution.

If you have any further questions regarding this matter, please contact Enforcement Project Engineer Gilbert Chang at extension 2963.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

0204684

Dear Mr. Tolleson:

Clarification of Enforcement Issues

On April 4, 2000, the Districts received a phone call from Mr. Fred Roybal, representing your company. Mr. Roybal was concerned over the company's recent receipt of two letters from the Districts referencing an SMR deficiency and an EPA monthly average violation. Mr. Roybal believed these letters were issued in error, and requested that the circumstances surrounding their mailing be reviewed and a summary letter be provided outlining the Districts' conclusion.

Following review of these letters it was concluded that the March 28, 2000 SMR delinquency letter was sent in error. The referenced SMR was hand carried to the Districts by the Districts' Inspector, Anie Kellzi. Please discard that letter as no response is necessary. The Districts have corrected their records to reflect that this SMR has been called complete. The Districts apologize for this error.

In regard to the monthly average letter, that letter will remain in effect. The re-categorization, and consequently the modification, of effluent limits for M. Stephens Mfg. did not occur until January 28, 2000. The sample in question was obtained on September 22, 1999, well before this re-categorization, and while the previous limits were still in effect. Therefore, Notice of Violation No. 17929, issued March 15, 2000, and the EPA Monthly Average letter dated March 29, 2000, will remain in effect.

If you have any questions regarding this matter, please contact Robert M. Wienke at extension 2905.

Very truly yours,

Charles W. Carry

Dear Mr. Roybal:

Temporary Industrial Wastewater Discharge Permit No. 14831

M. Stephens Mfg. Co.
8420 S. Atlantic Ave.
Cudahy, CA 90201

Inspections of your facility verify that all metal finishing operations have been removed from the site. The wastewater sources remaining at the site may, however, be subject to pretreatment standards under the Metal Molding and Casting Point Source Category. Final determination of the applicable categorization for your company will be made upon review of the permit application currently under the review of the Department of Public Works. In the interim, your company's self-monitoring requirements are being revised to remove the metal finishing pretreatment standards. M. Stephens Mfg. Co. must be in compliance with the Phase I Industrial Wastewater Effluent Limitations until these conditions and limitations are amended in writing or a formal permit has been issued. Attached is a new Self-Monitoring Requirements form indicating the parameters for which your company is required to test

If you have any questions concerning these requirements, please contact Alicia Jauregui of the Sanitation Districts' Industrial Waste Section at extension 2918.

Very truly yours,

Charles W. Carry

Account No: 2024383

Mr. Steve Shaul
President
M. STEPHENS MFG.
8420 Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Shaul:

**Notice of Violation No. 21684, Violation of
Industrial Wastewater Surcharge Regulations**

Enclosed is a copy of Notice of Violation No. 21684 which was issued to M. STEPHENS MFG. on February 3, 2003 as a result of a violation of requirements established in the Sanitation Districts' *Wastewater Ordinance*. The nature of noncompliance is outlined on the Notice of Violation along with a required date of correction. This notice was formally received by Dennis Barden, Plant Manager.

The Districts' Ordinance requires dischargers within the Districts to pay an annual industrial wastewater surcharge payment if the costs incurred to treat their wastes exceeds the amount of revenue derived from their ad valorem taxes. Your company was not in compliance with this requirement when the Violation Notice was issued.

All companies filing a Long Form Surcharge Statement are required to make three quarterly estimated prepayments during the fiscal year. The quarterly payments are due on:

September 30
December 31
March 31

These payments are in addition to the final payment (fourth quarter) due **August 15th**, which accompanies the annual surcharge statement. Short Form and User Charge Statements and payments are submitted only once a year (August 15th).

On April 1, 2002 the Sanitation Districts sent M. Stephens Mfg. a letter (see attached) informing the company about a deficient Self-Monitoring Report (SMR). On March 13, 2002 the Districts received an SMR for the period of July 1, 2001 to December 31, 2001, however, the laboratory results were the same as had been previously used for the period January 1, 2001 to June 30, 2001. M. Stephens Mfg. has been issued a Notice of Violation and sent a final letter threatening legal referral if this matter was not resolved. Again, the Districts implore you to resolve this deficiency immediately. Failure to comply with this requirement **by March 10, 2003** will leave the Districts no option other than referral for legal action.

When our office receives the required surcharge submittal and/or payment and the deficient SMR, the violation outlined in the Notice of Violation will be considered corrected.

Tom Tolson
Director of Manufacturing
M STEPHENS MFG.
8420 Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Tolson:

Notice of Violation No. 20056, Violation of Industrial Wastewater Discharge Regulations

Enclosed is a copy of Notice of Violation No. 20056 which was issued to M STEPHENS MFG. on October 13, 2009 as a result of a violation of requirements established in the Sanitation Districts' Wastewater Ordinance. The nature of non-compliance is outlined on the Notice of Violation along with a required date of cessation. This notice was formally received by Dennis Holden, Plant Manager.

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' Wastewater Ordinance. If violations are not corrected the Sanitation Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$15,000 a day for each violation. It is hoped that the attached Notice of Violation will serve to expedite compliance.

Full compliance with your discharge permit requires that your company perform and submit semi-annual Self-Monitoring Reports (SMR). These deficient SMRs were required because the initial SMRs contained reported parameters that exceeded a District's limit.

If your company has already sampled and analyzed for all the parameters of the SMR during the period in question, but has neglected to submit the results to the Districts, no further sampling is necessary. However, the appropriate attached SMR must be completed and submitted along with laboratory results, directly to the Sanitation Districts, attention Carlton Cheng, immediately.

If the sampling has not been done, your company is required to perform one (1) day of self-monitoring sampling. This sample must be analyzed for all required self-monitoring parameters and the analytical results must be entered on the appropriate SMR form. The required report must be completed and submitted directly to the Sanitation Districts, attention Carlton Cheng. All current and future SMRs must be submitted during their specific reporting period, directly to the Sanitation Districts, attention Carlton Cheng.

Alhambra CA 91802

To Whom It May Concern:

Enclosed please find one application for the change of ownership of M. Stephens Mfg. To BWF/ M. Stephens Mfg., as we have just recently gone through a merger. All connections have and will remain the same. No increase or decrease of 25 % or more of industrial discharge has or will take place. Previously submitted maps will match our existing operation. If you should have any questions concerning this matter please do not hesitate to page me at (909) 715-9983.

Sincerely,

Fred Roybal III
Senior Environmental Engineer

Re: Waste Discharge Requirements (CA0057576)

Gentlemen:

Reference is made to our letter dated February 22, 1980, which informed you that this California Regional Water Quality Control Board would consider readopting your current waste discharge requirements and NPDES Permit.

Pursuant to Division 7 of the California Water Code, this California Regional Water Quality Control Board, at a public hearing held on March 24, 1980, reviewed your current requirements, considered all factors in the case, and adopted Order No. 80-10 (copy attached) relative to this waste discharge. This Order, in part, readopts Order No. 75-103, previously adopted by this Board on August 18, 1975, as your waste discharge requirements and NPDES Permit and now expires on July 31, 1985. Please note that you must file an application for a new permit at least 180 days in advance of that date.

Your current Monitoring and Reporting Program remains in effect. Please reference all technical and monitoring reports to our Compliance File No. 6178. We would appreciate it if you would not combine other reports, such as progress or technical reports, with your monitoring reports, but would submit each type of report as a separate document.

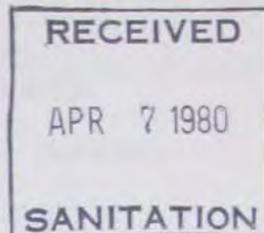

Very truly yours,

Raymond M. Hertel

ORDER NO. 80-70

READOPTION OF EXISTING
WASTE DISCHARGE REQUIREMENTS
AND
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMITS

The California Regional Water Quality Control Board, Los Angeles Region, finds:

1. The Board has adopted waste discharge requirements for a number of waste discharges to surface waters or tributaries thereto.
2. The adopted waste discharge requirements also serve as National Pollutant Discharge Elimination System (NPDES) permits pursuant to Section 402 of the Clean Water Act, or amendments thereto.
3. Reports of Waste Discharge have been filed for renewal of waste discharge requirements and NPDES permits which are scheduled to expire in the near future.
4. There have been no significant changes in the nature and conditions of the discharges.
5. The discharges are currently in compliance with requirements.
6. The renewal of waste discharge requirements for these discharges is exempt from the provisions of Chapter 3 (commencing with Section 21000) of Division 13 of the Public Resources Code in accordance with Water Code Section 13389.

The Board has notified the dischargers and interested agencies and persons of its intent to renew waste discharge requirements for these discharges and has provided them with an opportunity to submit their written views and recommendations.

The Board in a public hearing heard and considered all comments pertinent to the discharges and to the renewal of requirements.

IT IS HEREBY ORDERED, THAT:

The waste discharge requirements contained in the following Orders previously adopted by this Board are hereby readopted, with exceptions indicated herein below, as waste discharge requirements and National Pollutant Discharge Elimination System Permits with a new expiration date five years after the prior expiration date.

<u>NPDES No.</u>	<u>Adoption Date</u>	<u>Discharger</u>	<u>Order No.</u>	<u>Exception</u>
CA0002046	July 21, 1975	Southern California Gas Company (Olive Street Station)	75-86	Total Chromium effluent limitations are deleted
CA0055816	July 21, 1975	GATX Tank Storage Terminals Corporation (Los Angeles Harbor Terminal)	75-82	BOD ₅ 20°C effluent limitations are deleted
CA0057011	July 21, 1975	The Metropolitan Water District of Southern California (Palos Verdes Reservoir)	75-73	None
CA0057207	January 23, 1978	Pomona Valley Municipal Water District	78-11	BOD ₅ 20°C and oil and grease effluent limitations are deleted
CA0057444	July 21, 1975	Morton Chemical Company Division of Morton-Norwich Products, Inc.	75-79	None
CA0057576	August 18, 1975	Trico Industries, Inc., Superior Division	75-103	The maximum rate of discharge is reduced from 50,000 gallons per day (gpd) to 10,000 gpd; and Mass discharge rates are reduced proportionally
CA0053589	August 22, 1977	A. G. Layne, Inc.	77-160	Effluent limitations for BOD ₅ 20°C and phenols are deleted.

will be pursued.

Gentlemen:

Reference order No. 75-103 N.P.D.E.S. #CA0057576, our prescribed requirements for monitoring and reporting our waste discharge. Please find attached the laboratory report and our report for months of October, November and December 1980.

Enclosed laboratory report shows that in December 1980 we exceeded allowable concentration limits for oil and grease. Immediate corrective action was taken and a subsequent sampling and laboratory report shows that we are well within limits. This report will follow immediately to your office.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on the 19th day of January, 1981.

Very truly yours,

Bill Basshan

NOTICE OF VIOLATION
AND
ORDER TO COMPLY

Date September 23, 1982

File I-0877-2Y

To Trico Industries, Inc.

Location 8420 So. Atlantic Ave., Cudahy, Ca. 90201

You are hereby directed to correct the following violations of ^{City} ~~Los Angeles County~~ Ordinance No. 242 and/or the conditions and limitations

of Industrial Waste Disposal Permit No. 3068 by immediately, 19 82

Immediately discontinue discharging waste water to your neighbors property from the clean up of your paint equipment.

Immediately start clean up operations of any stains or residues on your property and your neighbors property that was caused by your discharge. The cleanup should be completed by Oct. 1, 1982

All waste liquids generated on your property must be either discharged to the sewer by way of an approved pretreatment system or it must be held in an approved holding tank and hauled to a legal point of disposal.

Submit a proposal by Oct. 8, 1982, for approval, that describes your corrective actions and your method of preventing any further violations

All waste producing operations must be carried on in a legal manner.

Nature of complaint (violation) Dumping Paint in rear of property and allowing it to flow onto their neighbors at Dur-Red products.

Special Instructions Investigate

REPORT: (Narrative description of observations including physical condition of site, types of materials and chemicals, trade names, extent of waste flow, damage observed, statements of witnesses, preventive measures taken, location of sample points and directives given to alleged discharger.)

Observation of site in the presents of Mr. Mike Mygard, manager, revealed that approximately thirty (30) gallons of paint equipment clean up water had been discharged to Dur-Red Products parking lot. He said that they had run out of drums and his men had thrown the water in the rear of their property. It had flowed onto Dur-Red property. He also said that he had immediately purchased some new drum after he discovered it, and that he had placed absorbing material on the liquid waste. He was informed of the violation and agree to correct it.

Re: Bryant Die Cast, 8420 Atlantic Ave., Cudahy

Dear Sir,

Upon excavation of the industrial waste water system, it was discovered that the existing sewer system was too shallow to connect the discharge side of the clarifier to.

We would like approval to install an automatic ejector in the sample box to pump to the sewer. The pump we intend to use, has a pump down range of 7 to 10 inches, leaving at least 3 inches of water in the sample box at all times.

Enclosed are the specifications of the ejector.

Thank You

PRODUCT BULLETIN

KOTE 63

A. INTRODUCTION

Kote 63 is a dual purpose, powdered chemical used for simultaneously cleaning and producing a phosphate coating on steel, aluminum, and zinc in preparation for painting.

B. BATH MAKE-UP

For each 100 gallons of bath, add:

12.5 pounds of Kote 63 (2 oz/gal)

C. OPERATING DATA

Temperature	140° - 150°F
Spray Time	1 - 5 minutes
Nozzle Pressure	15 - 30 psi

D. TITRATION PROCEDURE

1. Pipette a 10-ml bath sample into a beaker.
2. Add 5 - 7 drops of phenolphthalein.
3. Fill the automatic burette to the zero mark with 0.1N sodium hydroxide.
4. While stirring the sample, slowly run in the sodium hydroxide until a pink color is obtained.
5. Record the number of milliliters of sodium hydroxide used as the Kote 63 titration. The bath should be maintained within a range of _____ to _____ mls.

Replenishment: For each milliliter below the specified range, add _____ lbs of Kote 63 to the bath.

E. SAFETY NOTES

Make sure that anyone involved with the use of this product has read and understands the information on the CAUTION label affixed to the shipping container.

Skin contact causes irritation. Eye contact causes irritation. Toxic and corrosive by ingestion.

EMERGENCY AND FIRST AID PROCEDURES

For skin contact - Flush with large amounts of water. For eyes - Flush with water for 15 minutes and obtain medical attention. Ingestion - give 3 or 4 glasses of water, induce vomiting until fluid is clear and obtain medical attention.

SECTION VI - REACTIVITY DATA

STABILITY	UNSTABLE		CONDITIONS TO AVOID
	STABLE	X	
INCOMPATIBILITY (Materials to avoid)			
Caustic and alkaline products.			
HAZARDOUS DECOMPOSITION PRODUCTS			
Fluorine compounds and oxides of phosphorus.			
HAZARDOUS POLYMERIZATION	MAY OCCUR		CONDITIONS TO AVOID
	WILL NOT OCCUR	X	

SECTION VII - SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED

Avoid contact. Wear protective gloves. Sweep up and return to container. Wash thoroughly after handling. Flush residue to sewer.

WASTE DISPOSAL METHOD

Contains fluorides and molybdates which may be controlled by sanitation district as well as OSHA. Dispose of in accordance with applicable regulations.

SECTION VIII - SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION (Specify type)

None - Product is not dusty.

VENTILATION	LOCAL EXHAUST	SPECIAL

PRODUCT BULLETIN

RC 53

A. INTRODUCTION

RC 53 is an acidic, non-chromium containing liquid final rinse for iron or zinc phosphated metal prior to painting. The RC 53 provides maximum corrosion protection of bare phosphated surfaces and provides increased corrosion resistance of the final paint finish.

B. BATH MAKE-UP

For each 100 gallons of bath, add

1 PINT of RC 53

C. OPERATING DATA

Temperature	100° - 140°F
Time	30 seconds - 1 minute
pH Range	3.5 - 4.3

D. TITRATION PROCEDURE

1. Pipette a 25-ml sample of the bath into a beaker.
2. Add 5 - 7 drops of phenolphthalein indicator.
3. Fill the automatic burette to the zero mark with 0.1N sodium hydroxide.
4. While stirring the sample, slowly run in the sodium hydroxide until a pink color is obtained.
5. The number of mls of sodium hydroxide used, represents the number of pints of RC 53 the bath contains per 100 gal.

E. EQUIPMENT NOTES

The RC 53 tank may be constructed of mild steel.

F. SAFETY NOTES

DANGER! Strongly acid solution. Causes burns. Do not get in eyes, on skin, on clothing. Do not take internally.

Cal-Star Chemicals, Inc. warrants to the original purchaser of this product that it will perform satisfactorily when used according to directions and will refund the cost of it if it fails to perform as stated. Cal-Star assumes no further expressed or implied obligation in connection with said product.

MATERIAL SAFETY DATA SHEET

L. A. COUNTY ENGINEER
SANITATION DIVISION

Dear Mr. Ramos:

Industrial Wastewater Discharge Permit No. SAN 576

Bryant Die Cast Company
8420 S. Atlantic Avenue
Cudahy, CA 90201

Enclosed are four (4) approved sets of plans and copies of the approved Industrial Wastewater Discharge Permit for the subject company. Please review these for compliance with your requirements, and retain the copies you require for your files. A copy of this letter is forwarded to the applicant to notify him of the Sanitation Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Sanitation Districts for our records. The approved plans consist of:

1. Dwg. No. 8038: Interceptor Details
2. Dwg. "1612-W1: General Arrangement - 3 stage Washer
3. Dwg. No. D-02484-027: Three Stage Washer Details
4. Dwg. : Site Plan

Approval of the plans and permit is contingent upon continuing compliance with applicable Sanitation Districts' Ordinance requirements, upon any corrections shown in red on the drawings, and upon the items indicated on the attached requirement list.

If you have any questions concerning these requirements, please call Joel Sheldon of the Sanitation Districts' Industrial Waste Section at extension 269.

Very truly yours,

Charles W. Carry

to Federal Environmental Protection Agency (EPA) industrial categorical regulations are required to submit a Baseline Monitoring Report for every industrial waste discharge connection to the sewer. The purpose of the BMR is to indicate a company's compliance status with respect to the EPA's regulatory requirements.

Based on the submitted permit information, your company must submit a Baseline Monitoring Report for every industrial waste discharge connection. A standard BMR form is enclosed. This BMR form must be completed and returned to the Sanitation Districts by no later than 90 days from the date of this letter. If the BMR is not received by the Districts within the allotted time period, your company will be subject to enforcement actions. -----

9. The Sanitation Districts shall be notified in writing as soon as the interceptor and pH recorder installations are complete, or if any construction changes are contemplated that substantially revise information given on previously approved plans. -----
10. Information requested, or satisfactory evidence of compliance, must be submitted to the Sanitation Districts within 90 days for numbers 5,8 and 9. -----

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

Company Name Bryant Die Cast Company

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO. 10575

DATE OF PERMIT ISSUANCE August 13, 1984

The above named company is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. Characterization tests of the industrial wastewater must be performed at the intervals indicated on the Required Characterization Tests form and reported on the enclosed Critical Parameter Report Form. All indicated analyses should be performed by a State of California or Sanitation Districts' approved laboratory. The certification form attached to the Critical Parameter Report Form must be completed and signed by a responsible company official.

Any organic chemicals listed on the enclosed Appendix A that are used by Bryant Die Cast Co. must be analyzed and reported under the Total Toxic Organic characterization test requirement.

Revision of the Required Characterization Tests may be considered after initial analyses and upon written request with valid supporting information from the subject company. It is the responsibility of the subject company to report analyses of any other toxic materials shown in the Critical Parameter List, which are known to be present in the wastewater. ----- /XX/

2. The pH of the wastewater must be maintained above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not exceeded. Batch neutralization is required for any tanks containing acidic solutions before they are discharged to the sewer, if the solution pH is less than 6.0. ----- /XX/

YY ENCLOSE SUMMARY OF OFF-SITE DISPOSAL OF NON-SEWERABLE LIQUID WASTES OR COPIES OF WASTE HAULERS REPORTS

1/ Report all critical parameters required by the Sanitation Districts and any other critical parameter known to be present in the wastewater. Those parameters required by the Districts but known to be absent from the wastewater may be reported by placing the word absent in the appropriate space. Test procedures must be in accordance with procedures contained in the current edition of STANDARD METHODS, if applicable.

2/ If values are obtained by measurement or analysis write A in this column. Analysis values must be determined, using representative 24-hour composite samples, by a State Certified or Districts Approved Laboratory. If values are obtained by estimate, write E in this column. Estimated values are acceptable for new plants only.

Attention: Mr. Richard P. Bryant

Gentlemen:

BRYANT DIE CAST CO.
8420 S. ATLANTIC AVE.
CUDAHY CA. 90201

Enclosed is Industrial Wastewater Discharge Permit No. 10575 for the disposal of wastes from operations at the subject location. All industrial wastes shall be disposed of in accordance with this permit and the attached special conditions and limitations. This permit or copies thereof should be kept on the premises for which the permit is issued.

It is important that the required facilities be regularly cleaned and maintained. After commencing operations, the Industrial Waste Engineering Inspector in your area will inspect the pretreatment process, explain the permit conditions, and make periodic inspections of your operations. Your full cooperation in preventing pollution is essential to the welfare of the community.

If you have any questions concerning this permit, please call this office at (213) 738-2526.

Very truly yours,

STEPHEN J. KOONCE
County Engineer

10. The County Engineer may modify this permit by addition, revision, or elimination of conditions and limitations as may be necessary to accomplish the purpose of ordinances and laws covering disposal of waste materials.
11. Violation of any of the conditions of the permit shall be cause for suspension or revocation of this permit.
12. A copy of this permit shall be maintained on the premises where it will be available at all times to operating personnel.

COUNTY OF LOS ANGELES
DEPARTMENT OF COUNTY ENGINEER-FACILITIES

INDUSTRIAL WASTE SEWER DISPOSAL
CONDITIONS AND LIMITATIONS
INDUSTRIAL WASTE DISPOSAL PERMIT NO. 10575

The maximum flow rate to the sewer shall be 7.5 gpm.

All liquid industrial wastes and water soluble solid wastes not acceptable for discharge into the public sanitary sewerage system shall be stored in leakproof containers pending transportation to a legal point of disposal. The permittee shall certify the source, quantity, and point of disposal by signing a California Hazardous Waste Manifest. A copy of the California Hazardous Waste Manifest is attached.

3. Copies of the completed California Hazardous Waste Manifest must be obtained and kept on file for a period of at least 180 days for any liquid industrial wastes transported from the site. The Manifest shall be made available to representatives of the County Engineer upon request.
4. Waste disposal operations shall be conducted in such a manner that no nuisance is created.
5. Representatives of interested governmental agencies concerned with the disposal of industrial wastes shall be permitted access at any reasonable time to take samples and inspect operations.
6. The permittee shall secure written approval from this Department before making any additions or modifications which may affect the quantity, quality, or method of disposal of waste materials. Requests or plans for additions or modifications to waste treatment facilities or method of disposal must be submitted for approval to the Department of County Engineer-Facilities, Sanitation Division, 550 S. Vermont Avenue, Los Angeles, California 90020.
7. This permit is subject to suspension or revocation if conditions exist which would justify denial of a permit or if permittee fails to correct unsatisfactory conditions.
8. All required industrial waste collection, treatment and disposal facilities must be installed prior to initiating any discharge.
9. In the event of any change of ownership, name or control of the waste disposal facilities the permittee shall notify the County Engineer of such change. He shall also notify the succeeding owner or operator of the existence of this permit by letter, a copy of which shall be forwarded to the County Engineer.

AUG 17 1984

L. A. COUNTY ENGINEER
SANITATION DIVISION

Industrial Wastewater Discharge Permit No.

Bryant Die Cast Company
8420 S. Atlantic Avenue
Cudahy, CA 90201

Enclosed are four (4) approved sets of plans and copies of the approved Industrial Wastewater Discharge Permit for the subject company. Please review these for compliance with your requirements, and retain the copies you require for your files. A copy of this letter is forwarded to the applicant to notify him of the Sanitation Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Sanitation Districts for our records. The approved plans consist of:

1. Dwg. No. 8038: Interceptor Details
2. Dwg. "1612-W1: General Arrangement - 3 stage Washer
3. Dwg. No. D-02484-027: Three Stage Washer Details
4. Dwg. : Site Plan

Approval of the plans and permit is contingent upon continuing compliance with applicable Sanitation Districts' Ordinance requirements, upon any corrections shown in red on the drawings, and upon the items indicated on the attached requirement list.

If you have any questions concerning these requirements, please call Joel Sheldon of the Sanitation Districts' Industrial Waste Section at extension 269.

Very truly yours,

Charles W. Carry

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

Company Name Bryant Die Cast Company

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO. 10575

DATE OF PERMIT ISSUANCE August 13, 1984

The above named company is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. Characterization tests of the industrial wastewater must be performed at the intervals indicated on the Required Characterization Tests form and reported on the enclosed Critical Parameter Report Form. All indicated analyses should be performed by a State of California or Sanitation Districts' approved laboratory. The certification form attached to the Critical Parameter Report Form must be completed and signed by a responsible company official.

Any organic chemicals listed on the enclosed Appendix A that are used by Bryant Die Cast Co. must be analyzed and reported under the Total Toxic Organic characterization test requirement.

Revision of the Required Characterization Tests may be considered after initial analyses and upon written request with valid supporting information from the subject company. It is the responsibility of the subject company to report analyses of any other toxic materials shown in the Critical Parameter List, which are known to be present in the wastewater. -----

/XX/

2. The pH of the wastewater must be maintained above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not exceeded. Batch neutralization is required for any tanks containing acidic solutions before they are discharged to the sewer, if the solution pH is less than 6.0. -----

SANITATION DISTRICTS OF LOS ANGELES COUNTY

INDUSTRIAL WASTE SECTION

REQUIRED WASTEWATER CHARACTERIZATION TESTS

Firm Name Bryant Die Cast Company Permit No. 10575
 Address of Property 8420 S. Atlantic Avenue Date August 13, 1984
 Producing Wastewater Cudahy, CA 90201
 Discharge S.I.C.No. 3479
 Frequency of Analyses Once every six months except* 1/ Flow 0.63 Million Gal/Yr

The following analyses and flow measurements shall be reported at the indicated frequency to the Sanitation Districts on the Districts' Critical Parameter Report Form (copy attached), which must be signed by an administrative officer of the company. Certain requested characterization tests may be deleted from future reports, if it can be demonstrated in writing that they exist in very minute amounts in the wastewater and are not used in any processes which generate wastewater.

Ident. Code	Test 3/	Ident. Code	Test 3/
A	Flow (Total) <u>2/</u>		
XXXXXXXXXXXX	Flow (Peak) <u>2/</u>		
C	COD*		
D	SS (Suspended Solids)*		
E	pH		
Y	Nickel		
FF	Zinc		
	* once only		

- 1/ Companies required to submit only annual characterization analysis data should submit it directly to the Districts on July 1; companies required to submit data every 6 months should submit data on January 1, and July 1; companies required to submit data every 3 months should submit data on January 1, April 1, July 1, and October 1. Required industrial wastewater characterization analysis data not received within 45 days of the required date will be considered delinquent and a possible cause for revocation of the Industrial Wastewater Discharge Permit.
- 2/ Total Flow and maximum 30-minute peak flow rate for the day when composite characterization sample is taken.
- 3/ It is the responsibility of the subject company to report analyses of any other toxic materials shown on the Critical Parameter Report Form, which are known to be present in the wastewater, or may occur in the wastewater as a result of a process change.

1. Reason for submittal - circle **A**, B, or C, and complete the corresponding questions.

A. New Permit (for new companies and for changes in ownership)

Type of business Diecasting

Is the facility new or existing? Existing

If existing, previous company name M Stephens Mfg.

Type of business Diecasting, Industrial Waste Permit No. 10575 R-1

Provide a description of all manufacturing processes below or in an attachment.

Provide a description of all wastewater producing operations below or in an attachment.

Are any changes being made to the facility's existing wastewater pretreatment/conveyance systems? NO If yes, briefly explain these modifications below or in attachments.

Is there more than one company discharging industrial wastewater at your facility? NO
If yes, provide for each company its name, a separate address and a description of its operations. If feasible, each company must apply for a separate permit and must have its own incoming water meter and a separate industrial wastewater sampling point.

If your facility will involve a new connection to the public sewer, please circle the point of connection: a. Local City sewer, b. Sanitation Districts' Trunk sewer.

If you are relocating, and had a previous Industrial Wastewater Discharge Permit, give your previous address _____, and permit no. _____
If you have received a temporary permit, give permit no. _____

All submittals for new permits **must** include a permit application, plans and pertinent supporting information.

B. Revision of Existing Permit (for a 25 percent or more change in wastewater quantity/quality)

Permit no. _____

Has your wastewater quantity and/or quality changed over 25 percent? _____ If yes, documentation addressing the magnitude and reason(s) for the change must be submitted. If no, a revision is not required at this time.

Have there been any changes in production processes, wastewater pretreatment systems or sewerage plumbing? _____ If yes, submit plans and describe these changes below or in attachments:

All submittals for a revised permit **must** include a permit application, plans (if changes have occurred) and supporting information.

C. Addendum to Permit (for modifications to the wastewater conveyance/pretreatment system)

Permit no. _____

Provide a brief summary of the existing conditions and the proposed changes below.

Submittal must include plans and supporting information.

The applicant must also answer the questions on the back of this form.

FORM B: CALCULATION OF INDUSTRIAL WASTEWATER DISCHARGE FLOW RATE

COMPANY NAME: BWF / M. Stephens Mfg.

Calculation of flow rate is based on: Adjusted metered water supply (Company must complete the calculations below)
 (Check one) Direct measurement through a Districts' approved effluent flow measurement system *
 Estimate for a facility not yet in operation **

ADJUSTED METERED WATER SUPPLY CALCULATIONS (Round all figures to two decimals)

I Incoming Water

- | | MILLION
GALLONS
PER YEAR | |
|---|--------------------------------|-----|
| 1. Metered Water Supply from Purveyor (Water Company).
Use most recent 12 consecutive months and attach copies of water bills. | 2.76 | MGY |
| 2. Water Supply from Company Well.
Attach meter or water master data for most recent 12 consecutive months. | . | MGY |
| 3. Water Received in Raw Materials, or by other means.
Explain in attachments. | . | MGY |
| 4. Rainwater/Groundwater Discharged to the Sewerage System.
Explain in attachments. | . | MGY |
| 5. Total Incoming Water.
(Add lines 1 to 4) | 2.76 | MGY |

II Water Losses

- | | | |
|---|------|-----|
| 6. Wastewater Discharged to Stormwater Drainage System
Explain in attachments. (NPDES Permit No.) | . | MGY |
| 7. Water Lost Through Evaporation and Irrigation.
(add lines a + b + c + d on the back of this form) | . | MGY |
| 8. Water Lost in Products.
Explain in attachments. | . | MGY |
| 9. Sanitary Flow Deduction
(from line "e" on the back of this form) | 1.35 | MGY |
| 10. Total Water Losses
(add lines 6 to 9) | 1.35 | MGY |

III Industrial Wastewater Discharged

- | | | |
|---|--------|-----|
| 11. Calculated Industrial Wastewater Discharged to the public sewer
(subtract line 10 from line 5) | 1.41 | MGY |
| 12. Any Proposed increase (+) or decrease (-) in industrial waste-
water discharge to the public sewer? (explain in attachments) | (+)(-) | MGY |
| 13. Total proposed yearly industrial wastewater discharge
(add lines 11 and 12) | 1.41 | MGY |
| 14. Average industrial wastewater flow
(use line 13 to calculate below) | | |

Million Gallons per Year	×	1,000,000	+	Number of Discharge Days per Year	=	Gallons per Day
1.41	×	1,000,000	+	360	=	3916

This is the average daily flow rate that must be used on the application for industrial wastewater discharge.
 (It may be rounded to two significant figures.)

Note: The applicant must also complete the calculations on the back of this page.

- * If your company currently has an approved effluent wastewater flow measurement system, please submit effluent totalizer readings for the last twelve months. Your company does not have to complete the rest of this form.
- ** The company must submit detailed information that substantiates how the flow rate was estimated.

File:02-00.05-00/84-10575Y

Mr. Richard P. Bryant
Bryant Die Cast Co.
8420 S. Atlantic Ave.
Cudahy, CA 90201

Dear Mr. Bryant:

Industrial Wastewater Discharge Permit No. 10575

On August 13, 1984 your company was issued an Industrial Wastewater Discharge Permit that was contingent on the following conditions:

1. An automatic continuous pH recording instrument must be installed to monitor the pH of the wastewater discharge stream entering the public sewer. The probe for the pH instrument must be located downstream of any pretreatment operations or of branches which may be a source of industrial wastewater. The pH equipment must be regularly calibrated and maintained in good working order. At least 180 days of pH records must be filed at the discharge address and must be made available for inspection by representatives of the Sanitation Districts at any time during business hours. If pH records indicate periods of acidic or highly alkaline discharge, the applicant may be required to install a pH controlled neutralization system.
2. All companies subject to Federal Environmental Protection Agency (EPA) industrial categorical regulations are required to submit a Baseline Monitoring Report for every industrial waste discharge connection to the sewer. The purpose of the BMR is to indicate a company's compliance status with respect to the EPA's regulatory requirements.

Based on the submitted permit information, your company must submit a Baseline Monitoring Report for every industrial waste discharge connection. A standard BMR form is enclosed. This BMR form must be completed and returned to the Sanitation Districts by no later than 30 days from the date of this letter. If the BMR is not received by the Districts within the allotted time period, your company will be subject to enforcement actions.

3. The Sanitation Districts shall be notified in writing as soon as the interceptor and pH recorder installations are complete, or if any construction changes are contemplated that substantially revise information given on previously approved plans.

NO - PERM - FILE
Copy from the
Permit Cabinets

Enclosed is Industrial Wastewater Discharge Permit No. 10575 for the disposal of wastes from operations at the subject location. All industrial wastes shall be disposed of in accordance with this permit and the attached special conditions and limitations. This permit or copies thereof should be kept on the premises for which the permit is issued.

It is important that the required facilities be regularly cleaned and maintained. After commencing operations, the Industrial Waste Engineering Inspector in your area will inspect the pretreatment process, explain the permit conditions, and make periodic inspections of your operations. Your full cooperation in preventing pollution is essential to the welfare of the community.

If you have any questions concerning this permit, please call this office at (213) 738-2526.

Very truly yours,

STEPHEN J. KOONCE

INDUSTRIAL WASTE SEWER DISPOSAL
CONDITIONS AND LIMITATIONS
INDUSTRIAL WASTE DISPOSAL PERMIT NO. 10575

1. The maximum flow rate to the sewer shall be 7.5 gpm.
2. All liquid industrial wastes and water soluble solid wastes not acceptable for discharge into the public sanitary sewerage system shall be stored in leakproof containers pending transportation to a legal point of disposal. The permittee shall certify the source, quantity, and point of disposal by signing a California Hazardous Waste Manifest. A copy of the California Hazardous Waste Manifest is attached.
3. Copies of the completed California Hazardous Waste Manifest must be obtained and kept on file for a period of at least 180 days for any liquid industrial wastes transported from the site. The Manifest shall be made available to representatives of the County Engineer upon request.
4. Waste disposal operations shall be conducted in such a manner that no nuisance is created.
5. Representatives of interested governmental agencies concerned with the disposal of industrial wastes shall be permitted access at any reasonable time to take samples and inspect operations.
6. The permittee shall secure written approval from this Department before making any additions or modifications which may affect the quantity, quality, or method of disposal of waste materials. Requests or plans for additions or modifications to waste treatment facilities or method of disposal must be submitted for approval to the Department of County Engineer-Facilities, Sanitation Division, 550 S. Vermont Avenue, Los Angeles, California 90020.
7. This permit is subject to suspension or revocation if conditions exist which would justify denial of a permit or if permittee fails to correct unsatisfactory conditions.
8. All required industrial waste collection, treatment and disposal facilities must be installed prior to initiating any discharge.
9. In the event of any change of ownership, name or control of the waste disposal facilities the permittee shall notify the County Engineer of such change. He shall also notify the succeeding owner or operator of the existence of this permit by letter, a copy of which shall be forwarded to the County Engineer.

10. The County Engineer may modify this permit by addition, revision, or elimination of conditions and limitations as may be necessary to accomplish the purpose of ordinances and laws covering disposal of waste materials.
11. Violation of any of the conditions of the permit shall be cause for suspension or revocation of this permit.
12. A copy of this permit shall be maintained on the premises where it will be available at all times to operating personnel.

ATTN: ROBERT HARTLEY

Bryant Die Cast is presently engaged in the manufacture of electrical die cast fixture fittings. In the process of painting these fixtures, material is passed through a three stage washing unit, where they are cleaned and iron phosphate coated.

The center, clean rinse stage, has an overflow rate of approximately 5 GPM or 3000 gallons per working day. With the addition of the new washing unit, the project flow rate will increase approximately 50%.

If further information is needed, please contact me at above address.

Sincerely,

Jerry Grandusky
Production Supervisor.

- 1/ Report all critical parameters required by the Sanitation Districts and any other critical parameter known to be present in the wastewater. Those parameters required by the Districts but known to be absent from the wastewater may be reported by placing the word absent in the appropriate space. Test procedures must be in accordance with procedures contained in the current edition of STANDARD METHODS, if applicable. Test procedures for priority organics must be run in accordance with the appropriate EPA method.
- 2/ If values are obtained by measurements or analyses write A in this column. Analysis values must be determined, using representative 24-hour composite samples (unless the parameter is identified by footnote 4/), by a State Certified or Districts Approved Laboratory. If values are obtained by estimate, write E in this column. Estimated values are acceptable for new plants only.
- 3/ Report flow rates for sampling day.
- 4/ Grab samples should be acquired with precautions taken to insure that volatile constituents are preserved.

PRODUCT BULLETIN

12340 FIRESTONE BLVD., SUITE 5, NORWALK, CA. 90605

TELE: (213) 929-1745

KOTE 63

A. INTRODUCTION:

KOTE 63 is a dual-purpose, powdered chemical which simultaneously cleans and produces a phosphate coating on steel, aluminum and zinc surfaces to prepare them for painting.

KOTE 63 is used in a three or more stage power spray washer.

B. BATH MAKE-UP:

For each 100 gallons of bath, add to the water with stirring:

KOTE 63 12.5 lbs. (2.0 oz./gal.)

- Notes:
1. To be certain that all added chemical is dissolved, pre-dissolving in water is suggested or add chemical by placing in a perforated bucket suspended in the bath and with circulating pump running.
 2. While the above suggested make-up is normal for most operations, metal or water conditions may require a higher concentration. Your CAL-STAR Representative will assist in making this determination.

C. OPERATING DATA:

Temperature 140 to 150°F.
 Time 1 to 5 minutes
 Titration 9.0 to 12.0
 pH 3.5 to 4.5
 Spray pressure 15 to 30 psi

Control points for your bath:		
Temperature	135 to 140	°F.
Time	1 to 1 1/2	minutes
Titration	11.0 to 14.0	mls.
pH	3.5 to 4.5	
Pressure	12 to 17	psi
Bath make-up	850 gals. of water	
	100 lbs. of KOTE 63	

*Stage 3 600 gals 1/2 gallon Control 40 pH = 4.0 to 4.5
 additions = 1/4 gal or 1 qt.*

The information contained herein is based on our experience and sources which we believe to be accurate. Since use of the product is normally beyond our control, no warranty is implied and we assume no liability for damages of any kind. This PRODUCT BULLETIN further shall not be considered as permission or a recommendation to use the product in violation of any existing patent.

Attention Mr. Gerald Grandusky

Gentlemen:

BRYANT DIE CAST COMPANY
8420 SOUTH ATLANTIC AVENUE, CUDAHY
INDUSTRIAL WASTEWATER DISCHARGE PERMIT(S) NO. 10575 (J)

Enclosed is Industrial Wastewater Discharge Permit(s) (IWDP) regulating disposal of waste from operations at the subject location. The permit(s) are issued jointly by the Sanitation Districts of Los Angeles County (SDLAC) and the local sewerage agency (city or county) to satisfy permit requirements of the SDLAC Wastewater Ordinance and the local agency Industrial Waste and Sanitary Sewer Ordinance. Additional conditions and limitations have been attached to your IWDP relating to local agency requirements and are an integral part of that permit as are any approved plans submitted with your IWDP application. Your IWDP(s) or copies thereof shall be kept on the premises for which the permit(s) is issued.

Facilities under IWDP are subject to inspection by both SDLAC and the local agency. Department of Public Works Industrial Waste Inspectors perform this function for the local agency with jurisdiction over this IWDP. An annual industrial waste inspection fee is required to maintain a valid IWDP.

If you have any questions concerning your IWDP, please call Mr. Shiv Gaur of this office at (818) 458-3540.

Very truly yours,

T. A. TIDEMANSON

INDUSTRIAL WASTE DISPOSAL PERMIT
CONDITIONS AND LIMITATIONS

Part A - ON-SITE DISPOSAL, PUBLIC SANITARY SEWER

1. Disposal of industrial wastewater to the public sanitary sewer system shall be limited to the flow rate indicated below:
 - a. Local Sewer. The maximum permitted peak flow rate to the sewer shall be 7.5 gallons per minute (gpm).
 - b. Trunk Sewer. Maximum permitted daily flow to the sewer shall be no greater than 25% in excess of the value on line 13 of the attached Permit for Industrial Wastewater Discharge.

2. Pretreatment, monitoring and control facilities required under this permit shall consist of the system indicated below:
 - a. Sampling point prior to combining industrial wastewater flow with domestic wastewater.
 - b. Final gravity separator (clarifier) 1000 gallon capacity, 3 stage.
 - c. PH measurement and recording system.
 - d. Automatic pH control.
 - e. Flow measurement.
 - f. Automatic rain water diversion system with alarm capable of diverting storm flow in excess of the first 0.10 inch of rain from the sanitary sewer system.
 - g. Additional pretreatment/control facilities: 2 - Three stage washing units.

3. Industrial wastewater shall at all times meet the following effluent quality limitations prior to discharge to the sanitary sewer system:
 - a. As specified in Part D - Effluent Quality Limitations.
 - b. Additional quality limitations: _____

4. The permittee shall submit the following periodic reports:
 - a. Self-monitoring and/or industrial wastewater treatment surcharge reports as may be required by the Sanitation Districts of Los Angeles County. NOTE: These reports are to be submitted directly to the Sanitation Districts.
 - b. Self-monitoring compliance reports as described in Part E of this permit.

5. All required industrial wastewater collection, pretreatment, monitoring, disposal and sampling facilities must be installed in accordance with approved plans and prior to initiating any discharge to the sewer system.

by H. Kobac Date 7/15/75

County of Los Angeles, Department of Public Works
Industrial Waste Disposal Permit

6. Discharge of any toxic, flammable, explosive, corrosive, radioactive or nonbiodegradable substance to the sanitary sewer is prohibited except as provided in Part A.3 above.
7. Discharge of uncontaminated cooling water, groundwater, stormwater or surface drainage water to the sanitary sewer is prohibited except as specifically authorized by this permit.
8. Discharge of industrial wastewater to the sanitary sewer with temperatures exceeding 140°F is prohibited.
9. This permit is subject to additional Conditions & Limitations attached: Part B - **Wastes Not Authorized for Discharge or Deposit in Part A**, Part C - **General Conditions and Limitations**, Part D - **Effluent Quality Limitations**, Part E - **Self-monitoring and Reporting** (only if designated in Part A.4.b).
10. Other:

Part B - WASTES NOT AUTHORIZED FOR DISCHARGE OR DEPOSIT IN PART A

1. Industrial wastes not specifically authorized for on-site pretreatment, storage, deposit, discharge or disposal in Part A of this permit shall be stored in leakproof containers within an area designated on plans approved by the Department of Public Works pending transport to a legal point of disposal.
2. The permittee shall determine if industrial wastes stored pursuant to Part B.1 above are hazardous wastes as defined in the California Health and Safety Code, Chapter 6.5 and as determined by California Administrative Code, Title 22, Division 4, Chapter 30 and shall manage such wastes as prescribed therein.
3. Hazardous wastes shall only be removed from the premises under a Uniform Hazardous Waste Manifest unless a variance from such documentation has been granted by the California Department of Health Services (DOHS). Generator copies of the Uniform Hazardous Waste Manifest shall be maintained by the permittee for not less than 180 days or as directed by DOHS.
4. A copy of the generator's Uniform Hazardous Waste Manifest shall be provided to the Department of Public Works, Engineering Services Division, Solid Waste Management Unit, P.O. Box 2418, Terminal Annex, Los Angeles, CA 90051 within 30 days from removal of such wastes from the permittee's premises. **NOTE: This requirement is in addition to any Self-Monitoring requirement in Part E of this permit when so designated in Part A.**
5. The permittee shall maintain records of the sources, quantity, name and address of hauler, date hauled, and point of legal disposal for nonhazardous industrial wastes and wastes granted a DOHS variance as described in Part B.3 above. Such records shall be kept a minimum of 180 days. A legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a California Regional Waste Quality Control Board and which is in full compliance therewith or a facility authorized to receive such wastes by the jurisdiction(s) regulating the facility and is in full compliance with all permits, regulations and requirements.
6. Discharge of industrial wastewater to a channel, stormdrain, stream, river, lake, ocean or other surface waters is prohibited unless authorized by a National Pollutant Discharge Elimination System (NPDES) permit issued by a California Regional Water Quality Control Board or the U.S. Environmental Protection Agency (EPA).

Part C - GENERAL CONDITIONS AND LIMITATIONS

1. A copy of this permit shall be maintained on the premises where it will be available at all times to operating personnel.
2. Industrial waste pretreatment, storage and disposal operations shall be conducted in such a manner that no nuisances are created.
3. The permittee shall allow representatives of interested governmental agencies concerned with the disposal of industrial waste access at any reasonable time to take samples, inspect operations and review any records required by this permit.
4. The permittee shall secure written approval from this Department before making any additions or modifications which may affect the quantity, quality, or method of disposal of industrial waste materials. Requests or plans for additions or modifications to industrial waste treatment facilities or method of disposal shall be submitted for approval to the Department of Public Works, Engineering Services Division, P.O. Box 2418, Terminal Annex, Los Angeles, CA 90051.
5. This permit is subject to suspension or revocation if conditions exist which would justify denial of a permit, if permittee fails to correct unsatisfactory conditions, if any of the Conditions and Limitations of this permit have been violated or if Annual Industrial Waste Inspection Fees, where required, are not paid within 90 days from date of notification.
6. The Director of Public Works may modify this permit by addition, revision, or elimination of conditions and limitations as may be necessary to accomplish the purpose of ordinances and laws covering disposal of waste materials.
7. This permit is valid only for the facility and location named thereon and is not transferable. In the event of any change of ownership, name or control of the industrial waste facilities subject to this permit, the permittee shall notify the Director of Public Works prior to the effective date of such change. Permittee shall also notify the succeeding owner or operator of the existence of this permit by letter, a copy of which shall be forwarded to the Director of Public Works. A new owner shall make application for an Industrial Waste Disposal Permit within 30 days from the date of assuming control of any facility subject to this permit.
8. Facilities subject to this permit shall not be abandoned. Cancellation of this permit may only be authorized pursuant to L.A. County Code Section 20.36.220.

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENT LIST

Company Name: Bryant Die Cast Company

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO: 10575 R-1

DATE OF APPROVAL: May 9, 1988

The above named company is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. This approval is a revision to Industrial Wastewater Discharge Permit No. 10575 issued on August, 13, 1984.
2. Characterization tests of the industrial wastewater must be performed at the intervals indicated on the Required Characterization Tests form and reported on the enclosed Critical Parameter Report Form. All indicated analyses should be performed by a Sanitation Districts' approved laboratory. The certification section on the back of the Critical Parameter Report Form must be completed and signed by a responsible company official.

Any organic chemicals listed on the enclosed Appendix A that are believed to be present in the wastewater must be analyzed and reported under the Total Toxic Organic characterization test requirement.

Revision of the Required Characterization Tests may be considered after initial analyses and upon written request with valid supporting information from the subject company. It is the responsibility of the subject company to report analyses of any other toxic materials shown in the Critical Parameter List, which are known to be present in the wastewater.

3. The pH of the wastewater must be maintained above 6.0 at all times. Proper neutralization procedures must be observed to assure that this limit is not violated. The pH equipment must be regularly calibrated and maintained in good working order. At least 180 days of pH records must be filed at the discharge address and must be made available for inspection by representatives of the Sanitation Districts at any time during business hours. If pH records indicate periods of acidic or highly alkaline discharge, the applicant may be required to install a pH controlled neutralization system. Batch neutralization is required for any tanks containing acidic solutions before they are discharged to the sewer, if the solution pH is less than 6.0.

By H. Rozac Date 7/15/85

4. The existing sampling box is hereby designated as the legal sampling point for the subject company. The permittee is responsible for maintaining and cleaning the sampling point to prevent any build-up of oil and grease, sediment or sludge; failure to do so does not invalidate sampling test results. Analytical results from samples taken from this location according to accepted sampling procedure shall be accepted as binding. Safe and convenient access to the sampling point must be provided for representatives of the Sanitation Districts.
5. The Sanitation Districts are required by law to enforce the Categorical Pretreatment Regulations established by the United States Environmental Protection Agency. Based on information submitted to the Districts, the permittee is subject to pretreatment standards for new sources in the Metal Finishing Category (40 CFR 433). The permittee must be in compliance with these limits upon commencement of discharge. A copy of the pretreatment standards is enclosed with the applicant's copy. The permittee is advised that any discharge in excess of these standards requires corrective action by the discharger. Penalties applicable to violation of these limits will be strictly enforced by the Sanitation Districts.

For industrial pollutants not regulated by the EPA regulation or where the EPA regulation is less stringent than those of the Sanitation Districts, the Districts will continue to enforce its effluent limitations. The subject EPA regulations do not authorize any violations of the Districts' regulations. The Districts' maximum concentration limits (for any wastewater effluent sample) for certain toxic materials are shown in the enclosed table of "INDUSTRIAL WASTEWATER EFFLUENT LIMITATIONS".

6. The spill containment for the proposed washer and for the existing washer must be changed so that the bottom drains and overflows from tanks 1 and 3 do not discharge directly over the floor sinks. The overflows and bottom drains must drain inside of the spill containment berm and the floor sinks must be located outside of the spill containment berm. Flexible hosing may be used when emptying the contents of the neutralized tanks.
7. This approval of the proposed spill containment system by the Sanitation Districts is for only the general concept presented. The proper construction and maintenance of the system is the responsibility of the permittee and his contractors.
8. Under no circumstances shall process solution spills be discharged to the sewer. Unreclaimed or untreated process solution spills shall be hauled to a legal disposal site.
9. When spill containment walls or dikes are constructed on existing concrete or masonry, the contact mortar or concrete shall be bonded to the existing surface and all joints shall be sealed with acid resistant sealant or materials.

- 3-
10. The proposed spill containment system shall be completed within 60 days of the date of this letter.
 11. The Sanitation Districts shall be notified in writing as soon as the spill containment system is complete, or if any construction changes are contemplated that substantially revise information given on previously approved plans.
 12. The permittee must keep a log book for spill containment that must be made available to Districts' employees during business hours. The log book must contain the following information:
 1. Date and time of the spill.
 2. Name of material that was spilled.
 3. Quantity (volume) of spill.
 4. Cause of spill.
 5. Method of disposal.
 6. Corrective action to prevent spills from reoccurring.

This log book pertains to all materials removed from spill containment areas.

13. The permittee is required to continue the regular interceptor maintenance and cleaning at intervals frequent enough to prevent a build-up of grit, oil, or grease which may enter the sewer.
14. Waste haulers reports must be obtained and kept on file for a period of at least 180 days for any liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Sanitation Districts upon request.
15. A new permit application must be submitted when there is a significant change in wastewater quantity (25% or more) or quality from that given in the approved permit information. The completed application should be submitted to the local governmental agency for initial processing prior to Sanitation Districts' review. Approval must be obtained prior to any construction of new facilities.
16. The permittee is required to notify the Sanitation Districts of any change in the status of the subject facility, if ownership or operating responsibility changes, or if the industrial waste connection is legally abandoned.

SANITATION DISTRICTS OF LOS ANGELES COUNTY
INDUSTRIAL WASTE SECTION

REQUIRED WASTEWATER CHARACTERIZATION TESTS

Firm Name Bryant Die Cast Company Permit No. 10575 R-1
 Address of Property 8420 S. Atlantic Avenue Date May 9, 1988
 Producing Wastewater Cudahy, CA 90201
 Discharge Once every 6 months S.I.C.No. 3479
1/ Flow 2.2 Million Gal/Yr

The following analyses and flow measurements shall be reported at the indicated frequency to the Sanitation Districts on the Districts' Critical Parameter Report Form (copy attached), which must be signed by an administrative officer of the company. Certain requested characterization tests may be deleted from future reports, if it can be demonstrated in writing that they exist in very minute amounts in the wastewater and are not used in any processes which generate wastewater.

Ident. Code	Test <u>3/</u>	Ident. Code	Test <u>3/</u>
A	Flow (Total) <u>2/</u>		
XXXXXXXXXXXX	Flow (Peak) <u>2/</u>		
C	COD		
D	SS (Suspended Solids)		
E	pH		
H	Sulfide - Dissolved		
FF	Zinc- Total		
GG	Oil & Grease		

- / Companies required to submit only annual characterization analysis data should submit it directly to the Districts on July 1; companies required to submit data every 6 months should submit data on January 1, and July 1; companies required to submit data every 3 months should submit data on January 1, April 1, July 1, and October 1. Required industrial wastewater characterization analysis data not received within 45 days of the required date will be considered delinquent and a possible cause for revocation of the Industrial Wastewater Discharge Permit.
- / Total Flow and maximum 30-minute peak flow rate for the day when composite characterization sample is taken.
- / It is the responsibility of the subject company to report analyses of any other toxic materials shown on the Critical Parameter Report Form, which are known to be present in the wastewater, or may occur in the wastewater as a result of a process change.
- * Grab samples should be acquired with precautions taken to insure that volatile constituents are preserved.

SANITATION DISTRICTS OF LOS ANGELES COUNTY
TABLE OF SURCHARGE TEST FREQUENCY

YEARLY CUMULATIVE FLOW		Required Frequency of Tests for Surcharge Parameters (Critical Parameters A, B, C, D) <u>1/</u> (Flow, Peak Flow, COD and Suspended Solids, respt.)
Million Gallons	Million Cubic Feet	
Less than 6.0	Less than 0.80	0 <u>2/</u>
6.0 to 15.0	0.80 to 2.00	1 per 6 Months
15.1 to 36.0	2.00 to 4.80	1 per 3 Months
36.1 to 250	4.80 to 33.33	1 per Month
Over 250	Over 33.33	1 per Week

NOTES:

- 1/ Companies having peak flows of 100 gallons per minute or more or total flows of 50,000 gallons per working day or more must provide a continuous automatic indicating, totalizing and recording or total industrial wastewater flows discharged.
- 2/ Companies with cumulative yearly flows less than 6.0 million gallons may determine surcharge parameters for use in the "Long Form" Surcharge Statement or may pay for discharge at the current flat rate charge per million gallons used in the "Short Form" Surcharge Statement and not test for surcharge parameters. At least two determinations of the surcharge parameters must be made to furnish data for use in the "Long Form" Surcharge Statement.

Richard Wozniak
Plant Manager
M. STEPHENS MANUFACTURING
8400 S. Atlantic Ave.
Cudahy, CA 91001

Dear Mr. Wozniak:

Violation Notice No. 9841, Violation of EPA Standards and of
Sanitation Districts' Industrial Wastewater Discharge Regulations

Enclosed is a copy of Violation Notice No. 9841 which was issued to M. STEPHENS MANUFACTURING on June 15, 1994, as a result of a violation of requirements established in the Sanitation Districts' Industrial Wastewater Ordinance. In one or more instances, wastewater discharged from your facility was also determined to be in violation of the Federal EPA Pretreatment Standards, 40 CFR, Part 453. The nature of noncompliance is outlined on the Violation Notice along with a required date of correction. This notice was formally received by you.

V101436

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' Wastewater Ordinance. If violations are not corrected the Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$25,000 a day for each violation. It is hoped that the attached Violation Notice will serve to expedite compliance.

As part of the Sanitation Districts' enforcement follow-up procedure your company is required to submit a written report no later than July 25, 1994. The report should describe the cause of the violation and outline corrective actions, implemented or proposed, which will prevent future violations. Failure to comply with this requirement will result in escalated enforcement action. If your company has already submitted a written response, please ignore this requirement.

If you have any further questions regarding this matter please contact Enforcement Project Engineer Ken Vasquez at extension 2961.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

Very truly yours,

Charles W. Carry

Dear Mr. Wozniak:

Notice of Violation No. 9835, Violation of
Industrial Wastewater Discharge Regulations

Enclosed is a copy of Notice of Violation No. 9835 which was issued to M. STEPHENS MANUFACTURING on June 1, 1994 as a result of a violation of requirements established in the Sanitation Districts' Wastewater Ordinance. The nature of noncompliance is outlined on the Notice of Violation along with a required date of correction. This notice was formally received by Ellenmary Bryant.

Issuance of a Notice of Violation serves as legal notification of a violation of the Sanitation Districts' Wastewater Ordinance. If violations are not corrected the Sanitation Districts will be compelled to take more stringent enforcement actions against your company, which may include petitioning the court for the imposition of civil liability in a sum not to exceed \$25,000 a day for each violation. It is hoped that the attached Notice of Violation will serve to expedite compliance.

As part of the Sanitation Districts' enforcement follow-up procedure your company is required to submit a written report no later than July 11, 1994. The report should describe the cause of the violation and outline corrective actions, implemented or proposed, which will prevent future violations. Failure to comply with this requirement will result in escalated enforcement action. **If your company has already submitted a written response, please ignore this requirement.**

If you have any questions regarding this matter, please contact Enforcement Project Engineer Ken Vasquez at extension 2961.

Your cooperation in complying with Sanitation Districts' requirements will be appreciated.

RE: GENERAL CONNECTORS CORPORATION

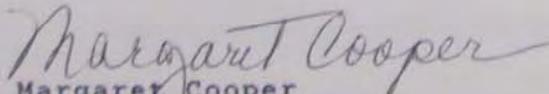

NAME CHANGE TO AVICA

Dear Mr. Payne:

The purpose of this letter is to advise the businesses who deal with General Connectors Corporation that we have officially changed our name to Avica, Inc. We may also be referred to as Avica USA. This name change symbolizes the recent management consolidations undertaken at General Connectors Corporation and Avica Equipment. All aspects of the day-to-day business remain unchanged.

We would appreciate if you would update your records accordingly.

Sincerely,

Margaret Cooper

Mr. Gerald Grandusky
M. Stephens Manufacturing
8420 S. Atlantic Avenue
Cudahy, CA 90201

Dear Mr. Grandusky:

Revised Self Monitoring Requirements & Approval of Toxic Organic Management Plan

The Sanitation Districts have reviewed your company's Toxic Organic Management Plan (TOMP) and have determined that it is acceptable. Any changes which are made to this plan are to be approved by the Districts prior to implementation. Districts' inspection staff will periodically visit the facility to determine compliance with the plan.

Because your company is now operating under an approved TOMP your self-monitoring requirements have been changed. Enclosed is a new Self-Monitoring Requirements form which indicates the parameters your company is required to test for and the required testing frequency. Your company must provide a signed certification statement and include all listed parameters on all self-monitoring reports which become due after April 15, 1992. Normally, the changes to your self-monitoring requirements would not take place until the July-December reporting period. However, as the Districts inadvertently overlooked the TOMP information submitted during the middle of the last reporting period and consequently did not approve the TOMP until today, the effective date of the changed requirements will be April 15, 1992 which was during the last reporting period.

M. Stephens Manufacturing must submit an application for a revised permit as the discharge flowrate has decreased by more than 25% from the permit flowrate. The revised permit application must be submitted to the County Dept. of Public Works within 60 days.

If you have any questions concerning these requirements, please contact Suzanne Wienke of the Sanitation Districts' Industrial Waste Section at extension 2921.

Very truly yours,

Charles W. Carry

Dear Mr. Grandusky:

Revised Self-Monitoring Reports

The Sanitation Districts are currently reviewing the status of all companies subject to EPA Electroplating and Metal Finishing pretreatment standards. According to our records your company is not monitoring for a sufficient number of parameters on your semi-annual self-monitoring reports. Attached is a new Self-Monitoring Requirements form which indicates the parameters your company is required to test for. Your company must include all listed parameters on all self-monitoring reports which become due after October 15, 1991.

If you have any questions regarding these requirements, please contact Suzanne Wienke of the Sanitation Districts' Industrial Waste Section at extension 2921.

Attention Mr. D. Carruthers

Gentlemen:

INDUSTRIAL WASTEWATER PERMIT APPLICATION
8420 S. ATLANTIC AVENUE, CUDAHY, CALIFORNIA

Enclosed are two sets of approved plans for the construction of industrial wastewater facilities located at 8420 S. Atlantic Boulevard, Cudahy, California.

Prior to initiating construction, the plans must be presented to the Building and Safety Division of the County Engineer at the Palos Verdes-Centinela Valley Regional Office to obtain the necessary construction permits. This office is located at 1823 W. Lomita Boulevard, Lomita, California 90717; telephone (213) 326-3630.

The industrial wastewater discharge permit cannot be issued until the National Pollutant Discharge Elimination System (NPDES) Permit from the California Regional Water Quality Control Board, Los Angeles Region, is obtained. This Board is located at 107 S. Broadway, Suite 4027, Los Angeles, California 90012; telephone (213) 620-4460.

No industrial wastewater may be discharged to the storm drain system until you have obtained the NPDES Permit. You are further required to contact the Los Angeles County Flood Control District located at 2250 Alcazar Street, Los Angeles 90033;

By H. Rozac Date 7/15/75

telephone (213) 226-4211 regarding their requirements for a connection to their system.

If you have any questions regarding this matter, please contact Mr. Ruben Garcia at telephone 974-7251.

Very truly yours,

Harvey T. Brandt

WASTE DISCHARGE REQUIREMENTS
FOR

TRICO SUPERIOR, INC.

The California Regional Water Quality Control Board, Los Angeles Region, finds:

1. Trico Superior, Inc., has filed a report of waste discharge and has applied for a permit to discharge wastes under the National Pollutant Discharge Elimination System.
2. Trico Superior, Inc., is engaged in the fabrication of steel pressure vessel, tank and associated equipment at 8420 South Atlantic Avenue, Cudahy, California, and plans to discharge up to 50,000 gallons per day of wastewater consisting of hydrostatic testing water and single-pass, non-contact cooling water containing no additives, to a storm drain in Atlantic Avenue after passage through a sand and grease interceptor to be built on the premises. The wastes will flow to Los Angeles River, a water of the United States, at a point approximately 1,500 feet downstream from the Firestone Boulevard bridge, above the tidal prism.
3. The Board adopted a Water Quality Control Plan for Los Angeles River Basin on March 10, 1975. The Water Quality Control Plan contains water quality objectives for Los Angeles River.
4. The beneficial uses of the receiving waters are: groundwater recharge, non-contact water recreation, potential water contact recreation, limited wildlife habitat; (within the tidal prism) industrial service supply, water contact recreation, fishing, preservation of rare and endangered species, marine habitat, saline water habitat, and potential shellfish harvesting.
5. Effluent limitation standards established pursuant to Section 301 of the Federal Water Pollution Control Act and amendments thereto are applicable to the discharge.

The Board has notified the discharger and interested agencies and persons of its intent to prescribe waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Board in a public hearing heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Water Pollution Control Act, or amendments thereto, and shall take effect at the end of ten days from the date of its adoption, provided the Regional Administrator, EPA, has no objections.

IT IS HEREBY ORDERED, that Trico Superior, Inc.,

in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Federal Water Pollution Control Act and regulations and guidelines adopted thereunder, shall comply with the following:

A. Effluent Limitations

1. Wastes discharged shall be limited to hydrostatic testing water and single-pass, non-contact cooling water containing no additives, as proposed.
2. The discharge of an effluent in excess of the following limits is prohibited:

Constituent	Discharge Rate (lbs/day)		Concentration Limit (mg/l)	
	Maximum		Average	Maximum
	Daily	30-Day Average		
Suspended solids	31.3	20.9	50	75
Settleable solids	---	---	0.1 ^{1/}	0.2 ^{1/}
BOD ₅ 20°C	12.5	8.34	20	30
Oil and grease	6.26	4.17	10	15
Turbidity	---	---	50 ^{2/}	75 ^{2/}
Total dissolved solids	626	626	---	1,500

^{1/} In ml/l

^{2/} In turbidity units (TU)

3. The daily discharge rate shall be obtained from the following calculation for any calendar day:

$$\text{Daily discharge rate} = \frac{8.34}{N} \sum_{i=1}^N Q_i C_i$$

in which N is the number of samples analyzed in any calendar day. Q_i and C_i are the flow rate (MGD) and the constituent concentration (mg/l) respectively, which are associated with each of the N grab samples which may be taken in any calendar day. If a composite sample is taken, C_i is the concentration measured in the composite sample and Q_i is the average flow rate occurring during the period over which samples are composited.

4. The 30-day average discharge rate shall be the arithmetic average of all the values of daily discharge rate calculated using the results of analyses of all samples collected during any 30 consecutive calendar day period. If fewer than four samples are collected and analyzed during any 30 consecutive calendar day period, compliance with the 30-day average rate limitation shall not be determined.
5. The pH of wastes discharged shall at all times be within the range 6.5 to 9.0.
6. The temperature of wastes discharged shall not exceed 100°F.
7. Wastes discharged shall not contain visible oil or grease, and shall not cause the appearance of grease, oil or oily slick, or foam in the receiving waters or on channel banks, walls, inverts or other structures.
8. Wastes discharged shall not cause the formation of sludge deposits.
9. Neither the disposal nor any handling of waste shall cause pollution or nuisance.
10. Wastes discharged shall not damage flood control structures or facilities.
11. This discharge shall not cause a violation of any applicable water quality standard for receiving waters adopted by the Regional Board or the State Water Resources Control Board as required by the Federal Water Pollution Control Act and regulations adopted thereunder. If more stringent applicable water quality standards are promulgated or approved pursuant to Section 303 of the Federal Water Pollution Control Act, or amendments thereto, the Board will revise and modify this Order in accordance with such more stringent standards.

LOS ANGELES REGION

STANDARD PROVISIONS

1. The requirements prescribed herein do not authorize the commission of any act causing injury to the property of another, nor protect the discharger from his liabilities under federal, state, or local laws, nor guarantee the discharger a capacity right in the receiving waters.
2. The discharge of any radiological, chemical, or biological warfare agent or high level radiological waste is prohibited.
3. The discharger shall require any industrial user of the treatment works to comply with applicable service charges and toxic and pretreatment standards promulgated in accordance with Sections 204(b), 307, and 308 of the Federal Water Pollution Control Act or amendments thereto. The discharger shall require each individual user to submit periodic notice (over intervals not to exceed nine months) of progress toward compliance with applicable toxic and pretreatment standards developed pursuant to the Federal Water Pollution Control Act or amendments thereto. The discharger shall forward a copy of such notice to the Board and the Regional Administrator.
4. The discharger shall permit the Regional Board:
 - (a) Entry upon premises in which an effluent source is located or in which any required records are kept;
 - (b) Access to copy any records required to be kept under terms and conditions of this Order;
 - (c) Inspection of monitoring equipment or records, and
 - (d) Sampling of any discharge.
5. All discharges authorized by this Order shall be consistent with the terms and conditions of this Order. The discharge of any pollutant more frequently than or at a level in excess of that identified and authorized by this Order shall constitute a violation of the terms and conditions of this Order.
6. The discharger shall maintain in good working order and operate as efficiently as possible any facility or control system installed by the discharger to achieve compliance with the waste discharge requirements.
7. Collected screenings, sludges, and other solids removed from liquid wastes shall be disposed of at a legal point of disposal, and in accordance with the provisions of Division 7.5 of the California Water Code. For the purpose of this requirement, a legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a regional water quality control board and which is in full compliance therewith.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
 LOS ANGELES REGION
 MONITORING AND REPORTING PROGRAM NO. 6178
 FOR

Trico Superior, Inc.
 (CA0057576)

The discharger shall implement this monitoring program within 60 days of the effective date of this Order. The first monitoring report under this program is due by January 15, 1976.

Monitoring reports shall be submitted by the dates in the following schedule:

<u>Reporting Period</u>	<u>Report Due</u>
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15

If no flow occurred during the quarter the report shall so state.

Effluent Monitoring

A sampling station shall be established for each point of discharge and shall be located where representative samples of that effluent can be obtained. The following shall constitute the effluent monitoring program:

<u>Constituent</u>	<u>Units</u>	<u>Type of Sample</u>	<u>Minimum Frequency of Analysis</u>
pH	pH units	grab	semiannually
Temperature	F	grab	monthly
Total waste flow	gal/day	----	monthly
Suspended solids	mg/l	grab	semiannually
Settleable solids	ml/l	grab	semiannually
BOD ₅ 20°C	mg/l	grab	quarterly
Oil and grease	mg/l	grab	quarterly
Turbidity	TU	grab	quarterly
Total dissolved solids	mg/l	grab	quarterly

The reports for the October-December and April-June quarters shall include the results of all semiannual analyses.

Samples shall be taken for both the hydrostatic testing water and single-pass, non-contact cooling water containing no additives.

Operation and Maintenance Report

The discharger shall file a technical report with this Board not later than 30 days after receipt of this permit, relative to the operation and maintenance program for this waste disposal facility. The information to be contained in that report shall include, as a minimum, the following:

- a. The name and address of the person or company responsible for operation and maintenance of the facility.
- b. Type of maintenance (preventive or corrective).
- c. Frequency of maintenance, if preventive.

INDUSTRIAL WASTE PLAN REVIEW & APPROVAL

FOR: TRICO SUPERIOR, Inc

8420 Atlantic Ave

city of Cudahy

Application No. O/E 103276

- () sets of plans are enclosed for your review and approval.
- () sets of approved plans are to be returned.
- () copy, Additional Information Questionnaire, enclosed.

COMMENTS: This unsigned application is for domestic waste only. The industrial waste from hydrostatic testing and single pass compressor cooling water will be discharged to the storm drain system directly. A copy of "Corp Grant Deed" is attached herewith.

THANK YOU

July 7, 1975

Mr. Harry Ruben
County of Los Angeles

Subject: Plan Check Instruction Sheet of
June 5, 1975

Dear Sir:

- 1 & 2 We have filled out and enclosed the application form you provided.
- 4. Enclosed, please find a check for \$20.00 payable to Harvey Brandt.
- 5. Enclosed is estimated values on your Industrial Wastewater Critical Parameter Report Form.
- 6. Enclosed are four (4) copies of our plot plan and Sand & Grease Interceptor drawings.
- 7, 8, & 9 Job or site address has been added to applicable drawings on lower right-hand corner. Plot plan shows adjacent streets and appropriate drains, sumps, etc.
- 10 & 11 These items are not applicable since our rainwater is discharged to storm drains and not city sewers.
- 12. Domestic sanitary wastes are a closed and complete system separate from any other wastewater.

continued.....

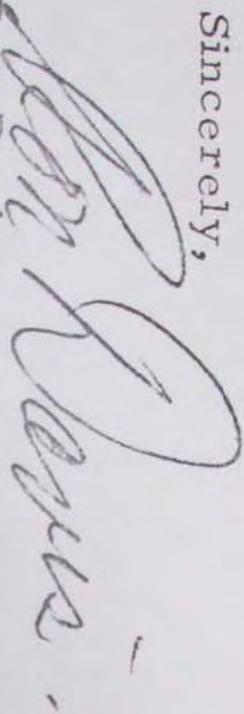

13. See plot plan and copy of Industrial Waste Statement enclosed.
14. Industrail waste water at this facility requires no pre or after treatment.
15. Refer to previously mentioned Interceptor drawings, Item 6.
19. Refer again to copy enclosed of Industrial Waste Statement for description of liquid wastes generated at this facility.
20. One-pass cooling water is not discharged into sewer system.
22. Industrial Waste Statement has been mailed to Harvey T. Brandt and enclosed is copy.
23. Trico Superior, at the previous location, did discharge clean hydrostatic testing water to the Los Angeles River vis adjacent storm drain, under Permit #CA-000 3514 attached, also a chemical analysis of our waste water. This is our intention for this facility and we have applied for permission with the appropriate agencies of government and received verbal approval from the California Regional Water Quality Control Board and the Los Angeles Flood Control District. Due to the time element needed for posting, we cannot make the Board meeting in July. It will have to be in August.
24. Under State Regulation #018274, we do industrial radiography. No water cooling is necessary.
25. Treater & F.W.K.O. terminology and outlines have been deleted from our plot plan drawing. These items were products for resale that we manufacture and are not part of the plant facilities
26. Occasional dye penetrant testing is done on a spot type of operation with rags used for wiping down and disposed of via trash sanitation service.
27. Vapor Recovery Units are a product for resale, of Trico Superior. Refer to Item 25 above.

continued.....

28.

In the 40' x 60' storage warehouse, it is our intention to abandon this trap. The trap next to the lavatory is for floor drain. This building is to be used for dry storage and will not require a floor drain. Our intent is to disconnect from sewer and fill in, under permit from City of Cudahy.

Sincerely,

Ron Davis

Subject: Industrial Waste Statement

Dear Sir:

- A. Trico Superior, 8420 South Atlantic Avenue, Cudahy, California 90201, is a company engaged in the fabrication of steel pressure vessels, tanks, and associated equipment.
- B. We have 150 employees at this facility on a two-shift day and a six-day week.
- C. The raw materials we use for fabrication of our products consist of the various types of steel, primarily in its various forms of sheet, pipe, angle, and etc. Any other raw materials are supporting this fabrication and they would consist of hardware, paint, welding materials, and etc.
- D. The hazardous materials upon our premises are: gasoline, paint thinners, acetone, naphtha, epoxy resin, liquid oxygen, and acetylene.
- E. Our industrial waste is:
 1. Primarily hydrostatic testing water, one time use from water supply.
 2. Cooling water from one compressor. This is fresh water discharged to flood control at not greater than 100° F.

continued.....

Plant Location: 8420 South Atlantic Boulevard, Cudahy, California 90201

MVN:dm

The above waters are the only water to be discharged to Flood Control and are cleaned in an approved type interceptor for grease and/or sediments.

Trico Superior, at the previous location, did discharge clean hydrostatic water to the Los Angeles River via adjacent storm drain under Permit Number CA 0003514 attached. A chemical analysis of our waste water is also attached. This is our intention for this facility, and we have applied for permission with the appropriate agencies of government and received verbal approval from the California Regional Water Quality Control Board the the Los Angeles Flood Control District. Due to the time element needed for posting, we cannot make the July Board meeting. We are scheduled for the August meeting.

3. Radiograph lab film developer and washwater is collected and sold for silver recovery.
 4. Lube oil, solvents, and junk paints are collected and disposed of by private contractor.
 5. Wash water from epoxy and paint spray booth is recycled and periodically collected and disposed of in steel drums by private contractor.
 6. Sand blasting dust is collected in an approved bag house #s A87703 and A87704, and periodically collected in plastic bags and disposed of by private contractor.
- F. The constituents of our hydrostatic test water and our compressor cooling water is as per attached laboratory analysis.
- G-H The average flow rate for our hydrostatic and compressor cooling waste water is 5000 to 10,000 GPD or 5.208 to 10.417 G.P.M. based on a 16 hour period. The peak design rate of flow is 102 G.P.M. @ approximately once/month.
- I. The hydrostatic testing and compressor cooling water is city water that receives little or no contaminants in our usage and requires no treatment. We are installing a sand and grease interceptor. Refer to our plot plan and Interceptor drawing for more details. The water discharged from the Interceptor is drained into the storm drain at Atlantic and Patata intersection, Cudahy, California

SAMPLE: Cooling Tower Bleed Off Water - Industrial Wastewater Discharge

INVESTIGATION: Chemical Analysis for the California Regional Water Quality Control Board, LA Region, Monitoring & Reporting Program No. 5842, NPDES No. CA 0053112

RESULTS

Sample was submitted on your behalf by Dearborn Chemical Company and showed the following results:

TEST PARAMETER	QUANTITY VALUES	EFFLUENT LIMITS	COMPLIES WITH LIMITS	EXCESS OVER MAXIMUM LIMITS
Total Waste Flow, Gals/day *	1427 gal/day	3000 gal/day	YES	NONE
pH, Units	8.6	6.5-9.0	Yes	None
Total Dissolved Solids, mg/l	617	1000	Yes	None
Total Chromium, mg/l	0.001	0.005-0.01	Yes	None

* Data to be provided and inserted by customer.

Gentlemen:

TRICO SUPERIOR, INC. (I-877-2Y)
8420 SO. ATLANTIC AVENUE

We have been notified that your National Pollutant Discharge Elimination System (NPDES) Permit has been issued. Your NPDES Permit requires self-monitoring of your effluent and may include monitoring of the receiving waters. In lieu of the self-monitoring report required by your County Industrial Waste Disposal Permit, you may forward this Department a copy of the report generated by your NPDES monitoring requirements.

Any conflicts which may exist between your NPDES Permit and your County permit will be resolved in favor of the NPDES Permit. Your County permit will, under these circumstances, be revised to conform with the NPDES requirements.

If any questions arise, please call Mr. Gordon Marion, telephone (213) 974-7240.

Very truly yours,

James T. Rostron
CHIEF DEPUTY

INDUSTRIAL WASTE DISPOSAL PERMIT

Permit No. 8068

File No. I-877-2Y

Permission is hereby granted under provisions of Ordinance No. 98,
the Sanitary Sewer and Industrial Waste Ordinance, to

TRICO SUPERIOR, INC.

P.O. Box 22200

Los Angeles, California 90022

to discharge to the sewer waste materials consisting of NONE

and to discharge to ~~the ground~~ a stream or channel wastewater
consisting of approximately 10,000 gpd of uncontaminated water used
for hydrostatic testing of metal tanks

at 8420 So. Atlantic Avenue

Cudahy, California 90201

Pretreatment facilities shall consist of a special 3,000 gallon
capacity sand and grease interceptor.

The maximum flow rate to the sewer shall be NONE gpm.

All wastes shall be disposed of in accordance with the provisions of
the conditions and limitation of this permit.

CONDITIONS AND LIMITATIONS

Industrial Waste Disposal Permit No. 8068

TRICO SUPERIOR, INC. (I-877-2Y)
8420 SO. ATLANTIC AVENUE
CUDAHY, CALIFORNIA 90201

1. Trico Superior, Inc. discharges up to 10,000 gallons per day of wastewater from a metal tank fabrication and testing operation into a storm drain tributary to the Los Angeles River.
2. The wastewater discharged to the Los Angeles River consists of uncontaminated water used for hydrostatic testing of metal tanks.
3. The wastewater discharged to the storm drain shall not exceed the limits set forth in the National Pollutant Discharge Elimination System Permit No. CA0057576, Order No. 75-103 issued by the California Regional Water Quality Control Board, Los Angeles Region, on August 18, 1975.

MONITORING AND REPORTING PROGRAM

The discharger shall submit to the County Engineer copies of the reports submitted to the California Regional Water Quality Control Board, Los Angeles Region, as set forth in the Monitoring and Reporting Program No. 6178 of NPDES Permit No. CA0057576.

Subject: Transmittal of Preliminary Assessment Report for M. Stephens Manufacturing
 APNs: 6224-034-010, -014, -032, -036, -037, -039, -040, and -041
 Subject Site Address: 4819 and 4839 Patata Street, 8420 S. Atlantic Avenue, Cudahy, CA 90201
 EPA Identification Number: CAN000909569

Dear Mr. Garcia:

Enclosed is the Preliminary Assessment Report for the subject site. The Preliminary Assessment was conducted by the U.S. Environmental Protection Agency (EPA) under Section 104 of the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended [42 U.S.C. 9404], commonly known as Superfund. The purpose of the Preliminary Assessment is to determine whether a site will qualify and benefit from inclusion on the National Priorities List (NPL) under Superfund.

Based on currently available information, which is contained in the enclosed report, EPA has determined that the site has the potential to qualify for the National Priorities List based on past handling of certain hazardous materials which have also been found in area groundwater. However, in order to substantiate if a release of these substances to area groundwater has occurred, EPA will need to conduct a Site Investigation at the subject facility. A Site Investigation includes taking soil and groundwater samples on the candidate site and on adjacent off-site properties. Once we have worked out a site access agreements, EPA will work collaboratively with you in order to implement the sampling as efficiently as possible and ensure that Site operations are impacted as minimally as practicable. The time frame contemplated for the sampling work is for the fall of 2015.

Please direct any questions or comments on this report to Matt Mitguard, Site Assessment Manager, at (415) 972-3096.

Sincerely,

Nicole Moutoux, Chief
 Brownfields and Site Assessment Section

SITE DECISION AND RATIONALE:

M. Stephens Manufacturing
EPA ID #: CA000909569

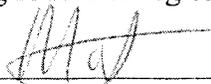

M. Stephens Manufacturing ("the Site") is located at 8420 South Atlantic Avenue, Cudahy, California. Additional addresses associated with the site property include 8414 South Atlantic Avenue and 4727, 4805, 4817, 4831, and 4839 Patata Street. The Site is composed of eight distinct county parcels and occupies approximately 5.9 acres in an urban industrial area. As of April 2014, the only significant structure at the Site was the former M. Stephens Manufacturing Building, which was located at the southwestern portion of the property.

The Site is currently owned by multiple entities including two related real-estate investment firms and the Cudahy Economic Development Corporation. Historic operations at the Site include, but may not be limited to: metal fabrication, electric parts manufacturing, and tool manufacturing from approximately the late 1940s through the mid-1980s; and die-cast electrical parts manufacturing from approximately 1986 through 2003. There have been no known significant operations conducted at the Site since 2003.

Between 1989 and 1995, several subsurface investigations were conducted at the southeastern portion of the Site in connection with the removal of on-site underground storage tanks (USTs). In 2005, a Limited Phase II Environmental Site Assessment (ESA) was conducted at the site by an outside company in association with a potential real estate transaction. The ESA included the collection of subsurface soil matrix samples at 11 locations across the Site, two of which were located adjacent to a former clarifier. Tetrachloroethylene (PCE) was identified in a shallow sample collected from adjacent to the former clarifier at a concentration of 6.7 $\mu\text{g}/\text{kg}$ (micrograms per kilogram) and in a shallow sample collected from a location approximately 70 feet west of the former clarifier at a concentration of 5.9 $\mu\text{g}/\text{kg}$. No additional elevated concentrations of volatile organic compounds (VOCs) or metals were reported during the investigation. No known soil vapor or groundwater sampling investigations have been identified in connection with the Site.

In conclusion, this report finds that there is evidence to indicate that a release of hazardous substances to groundwater may have occurred from one or more sources on the Site based on the historic use and storage of hazardous substance at the Site along with analytical data taken at the Site. PCE has been found in two on-site soil samples and it is possible, given the history of the Site that the substance will be found elsewhere. PCE is a substance known to be impacting area groundwater and drinking water wells. The regional groundwater flow direction within the deeper aquifers in the vicinity of the Site generally trends to the southwest with temporal fluctuations from west to south-southwest. The nearest impacted drinking water well, which was closed in 2002 due to VOC and metals contamination, was located approximately 0.17 mile south-southeast of the site. There are another 167 drinking water wells within 4 miles of the Site that include one non-impacted well, which is 0.26 mile to the northwest, and another impacted well that is 0.28 mile to the east-northeast, which was closed in 2000 due metals contamination. Many of the remaining drinking water wells in the 4 mile radius are hydrologically downgradient from the Site and could potentially be impacted by aquifer contamination from the Site. For these reasons, the Site warrants further Federal attention so that soil and groundwater data can be collected in order to determine if the Site is a contributing source of regional groundwater contamination.

Site Assessment Manager:

1.0 INTRODUCTION

This report presents the findings of the soil gas and soil sampling conducted at the subject property located at 8420 South Atlantic Avenue, Cudahy, California. The objective of this work was to evaluate for the presence of VOCs in soil gas and soil beneath the property as part of a pre-purchase due diligence investigation. This study was implemented following review of previous environmental reports prepared for the property and preparation of California Environmental letter report dated December 21, 2011. California Environmental also reviewed UST files for the property at the Los Angeles County Department of Public Works.

The purpose of the subsurface testing was to evaluate for subsurface impacts associated with the onsite use of PCE and storage of gasoline as identified in the previous environmental reports reviewed for the property. This report includes **CONCLUSIONS AND RECOMMENDATIONS** which are subject to the **NOTICE** at the end of this document. The scope of work included:

1. Notification of Underground Service Alert to mark utility locations.
2. Placement of eight temporary soil gas probes (15 soil gas samples) to depths of 5-15 feet bgs.
3. Soil sampling from one boring to depths of 5 and 15 feet bgs.
4. Analysis of soil gas and soil samples in a state certified laboratory.
5. Review of underground tank files at the Los Angeles County Department of Public Works
6. Preparation of this report.

1.1 SITE DESCRIPTION

The subject property is located on the northeast corner of Atlantic Boulevard and Patata Street, in the city of Cudahy, California; see **FIGURE 1 - VICINITY MAP**. The subject property consists of four adjoining parcels of land that encompass approximately 2.1 acres. The assessor's parcel numbers for the property are APNs: 6224-034-014, 032, 040 and 041. One warehouse structure and adjacent asphalt paved parking area occupy the site. The eastern and northern perimeter of the property is unpaved. The adjacent parcels are undeveloped; see attached **FIGURE 3 - SOIL GAS PLAN**.

2.0 PREVIOUS WORK

California Environmental (CE) prepared a report of expedited review of environmental documentation for the city of Cudahy, dated December 21, 2011. CE was provided nine environmental reports prepared by Converse Consultants related to a former industrial property that includes the subject parcels. The Converse reports were prepared in 2005 and 2007 and included Phase I and Phase II environmental assessments of the entire industrial property, of which the subject parcels are a part. The environmental reports for the property are listed in the **REFERENCES** section of the report. Included in the environmental documentation was a *no further requirements* letter issued by the County of Los Angeles Department of Public Works (LACDPW) for closure of a clarifier (industrial waste pretreatment facility), previously located north and adjacent to the subject parcels. The LACDPW closure letter references the site address 8420 South Atlantic Boulevard, however, the clarifier was located on an adjacent parcel not part of the proposed acquisition. The former industrial facility layout, which includes thirteen buildings and the property assessed by Converse Consultants, are shown on **Figure 2 – HISTORICAL SITE PLAN**. The subject property for the purpose of this environmental evaluation includes the areas of former buildings 5, 7, 8, 9 and 10. Building 9 remains on the property.

Historical site use data obtained from the Converse Consultants reports indicates that area of the subject property was residential in 1928. Industrial iron works operations occurred on the property from 1939 through 1961. A foundry and metal working facility were onsite in 1975. An electrical fixtures manufacturer operated onsite from approximately the 1980s through 2005. Converse Consultants identified environmental concerns associated with the industrial property. A manufacturing complex occupied the properties during the early 2000s at the time Converse Consultants prepared their assessment reports. The address for the complex included 8420 South Atlantic Avenue and 4819-4839 Patata Street. Converse identified a history of underground tanks at the southeast corner of the industrial complex, offsite of the subject parcels in the vicinity of former Building 3 (see **Figure 2**). Remedial clean-up of TPH and VOCs occurred in this area. The Regional Water Quality Control Board (RWQCB) issued a *closure letter* for these two tanks (1500 gallon diesel and 500 gallon waste oil) in 1995.

Converse also identified an area of paint waste remediation that occurred at the northeast portion of the industrial facility, offsite of the proposed parcels. No additional information regarding this remediation area was provided. A 10,000-gallon tank (gasoline) was removed from the subject property in the vicinity of Building 9 in 1987. This 10,000-gallon tank, based on the Converse Consultants site map, was located on the subject property east of building 9. Converse indicates in the findings of their January 17, 2006 Phase I report that the removal of the 10,000 gallon UST was “closed by the Regional Water Quality Control Board, however, no documentation of the closure was provided to Converse.” Converse also states in the same Phase I report that review of a previous Phase I prepared by MWA for the property in 1996, indicated that the 10,000 gallon tank was removed in 1987 and a closure report by Conservtech concluded that *no remedial action* was necessary. The MWA report apparently states that the Los Angeles County Department of Public Works (LACDPW) issued final closure for the tank on December 7, 1989. CE reviewed the LACDPW file for the property on December 21, 2011. Tank closure data indicate the 10,000-gallon gasoline tank was removed from the south side of Building 9, see **Figure 3- Soil Gas Plan**. The LACDPW file including the LACDPW UST closure letter is attached in **Appendix III**.

Converse drilled and sampled about 45 borings beneath the industrial property. Most of the borings were located on the portion of the industrial property not being acquired by the City of Cudahy. Of the borings excavated on the entire industrial property, four were excavated on the subject site. Two of the borings contained analytical data (B18 and B25) for soil samples. No analytical data could be found for Borings B21 and B22 which were located north of the existing building onsite (Building 9). The historical assessment data on the entire industrial property indicated areas of shallow TPH impacted soil and typically low levels of VOCs and background levels of heavy metals and SVOCs in soil. Converse did implement a remedial clean-up of TPH soil which was located on the eastern portion of the industrial facility offsite of the proposed acquisition area.

A preliminary review of the Geotracker Database located a nearby impacted site (8411 South Atlantic Avenue) where groundwater monitoring is occurring. The monitoring data from this offsite property, located to the west of the subject property, indicates a release of chlorinated solvents (TCE) occurred and shallow groundwater is impacted. The release is apparently related to leakage from a clarifier. The concentration of TCE in shallow groundwater adjacent to the subject property (east side of Atlantic Avenue) was 210 µg/l during June 2011. The groundwater gradient is described as variable; northerly, northeasterly, and northwesterly. Up to 1,600 µg/l of TCE was found in groundwater beneath the offsite property in the vicinity of the former clarifier. The depth to groundwater was measured at 54-55 feet bgs. CE recommended implementation of a soil gas survey at the property to assess for releases of VOCs (fuel and solvents) into soil beneath the site.

3.0 SUBSURFACE ASSESSMENT

California Environmental implemented the soil sampling and soil gas sampling as recommended in the CE letter of findings. The purpose of the subsurface testing was to evaluate the presence of VOCs associated with solvents and fuel use at the property.

3.1 SOIL GAS SAMPLING

Soil gas sampling was implemented onsite on January 3, 2012. Soil gas probe placement and sampling was conducted by H & P Mobile Geochemistry under the direction of California Environmental. A direct-push drill rig was utilized for the placement of the soil gas probes. Previous environment borings drilled on the property indicated permeable sediment (silty sand) to depths of 15 feet. Soil gas probes were placed beneath the northeast corner of the site where sumps and a nearby clarifier were previously located. Probes were also placed in the areas identified as previously containing underground tanks and in background locations. Eight temporary soil gas probes were placed at depths of 5 and 15 feet below ground surface. Fifteen soil gas samples were collected from the probe locations including the purge volume tests and sample duplicates. Soil gas samples were obtained and analyzed onsite for volatile organic compounds pursuant to DTSC/RWQCB guidelines (CalEPA/DTSC/RWQCB Advisory, 2003) in an onsite state certified mobile laboratory using EPA Method TO-15. The placement and sampling of each probe was conducted in accordance with the sampling methodologies identified in the CalEPA/DTSC/RWQCB Advisory.

The soil gas probes consisted of a sampling tip attached to inert nylon tubing. Each segment of tubing was pre-measured to ensure the correct depth. The sample point was set within a one-foot sand-sensing zone at the desired depth of each soil gas point. Dry granular bentonite was placed above and/or below the sand sensing zone and hydrated in order to seal the sand sensing zone. The probe was completed to the surface with the hydrated bentonite and capped with gas-tight 2-way valve preventing degassing of the gas point and interference from the surface gases. The soil gas probes were allowed to equilibrate for approximately 30 minutes prior to the collection of the soil gas sample. A site-specific purge volume test was completed at the first gas probe location. The optimum purge volume (7 PV) was utilized for all soil gas probes. One, 1-difluoroethane was utilized as the leak check compound. Probe locations were sampled using the H & P Mobile Geochemistry SOP which includes protocols for surface seals, purge volume tests, tracer compounds, sample flow rate, duplicate samples, and analytical instrument calibration.

Laboratory analysis of soil gas found VOCs in all samples analyzed. Benzene (up to $56 \mu\text{g}/\text{m}^3$), tetrachloroethene - PCE (ranging from $44 \mu\text{g}/\text{m}^3$ to $18,000 \mu\text{g}/\text{m}^3$), trichloroethylene-TCE (up to $120 \mu\text{g}/\text{m}^3$), toluene ($120 \mu\text{g}/\text{m}^3$) and xylenes ($56 \mu\text{g}/\text{m}^3$) were detected in soil gas. The lab tests on soil gas are tabulated in **TABLE I, APPENDIX I**. The laboratory report and chain of custody are attached in **APPENDIX II**. The locations of the soil gas probes and PCE data are depicted on the enclosed **FIGURE 3 – SOIL GAS PLAN**.

3.2 SOIL SAMPLING

H & P Mobile Geochemistry drilled one boring on January 3, 2012 using a Strataprobe hydraulic push rig under the direction of California Environmental. The boring was placed near soil gas point SV2 to evaluate for potential soil impacts. SV2 contained the highest concentration of PCE in soil gas. Individual soil samples were obtained from the boring at depths of 5 and 15 feet. Soil sampling was performed using an 18-inch long x 1.5 inch wide splitspoon sampler containing an 18-inch long acetate liner. Individual soil samples were extracted, capped with Teflon sheeting, plastic caps, taped, labeled, and placed on ice for transport to a state certified laboratory. Headspace gas of individual soil samples was monitored in the field using a Multi-RAE PID. All soil samples analyzed for VOCs were field sub-sampled pursuant to EPA Preservation Method 5035.

The soil samples were analyzed for volatile organic compounds per EPA Methods 8260B/5035. Volatile organic compounds were analyzed at a laboratory operated by H & P Mobile Geochemistry. Soil samples were placed in a chilled refrigerator within the mobile laboratory pending transport to the fixed laboratory. The soil samples were transferred under chain of custody. The soil sample at depth of 15 feet contained $6.9 \mu\text{g}/\text{kg}$ of PCE. The 5 ft depth sample did not contain detectable VOCs.

4.0 CONCLUSIONS AND RECOMMENDATIONS

California Environmental implemented subsurface testing of soil gas and soil beneath the subject property. CE also conducted research of underground tank files at the offices of LACDPW. The results of the testing and research are discussed below.

4.1 SOIL GAS SAMPLING AND GAS INTRUSION ANALYSIS

Eight (seven multi-depth) soil gas probes were placed beneath the property at depths of 5 and 15 feet. The soil gas test locations focused in areas identified as former sumps, a clarifier, in the locations reported for the removed 10,000 gallon underground gasoline tank and in background locations. Soil gas samples were analyzed for VOCs per EPA Method TO-15. The results of the soil gas sampling conducted on the property revealed low concentrations of benzene ($21\mu\text{g}/\text{m}^3$ to $56\mu\text{g}/\text{m}^3$) in several locations beneath the subject property. PCE was detected in 10 of the 15 soil gas samples ranging from $41\mu\text{g}/\text{m}^3$ to $18,000\mu\text{g}/\text{m}^3$. The highest concentrations of PCE in soil gas were located beneath the northeast corner of the property, close to the reported locations of a former clarifier and drainage sumps. Low concentrations of toluene, xylenes and trichloroethylene (TCE) were also detected in soil gas.

CalEPA-DTSC issued guidance (CHHSLs) for a variety of VOCs in shallow soil gas beneath commercial and residential properties in 2005. The DTSC advisory concentration for PCE in shallow soil gas beneath commercial property is $603\text{ug}/\text{m}^3$. This advisory concentration is exceeded in six (highest onsite value $18,000\text{ug}/\text{m}^3$ PCE) of the soil gas samples obtained from the property. However, in 2011 CalEPA-DTSC issued the Final Guidance document for evaluation of vapor intrusion into structures. The 2011 DTSC vapor intrusion guidance allows for use of other more current methodologies for evaluating future risk of vapor intrusion for sites that have VOCs in shallow soil gas. The USEPA Region 9 issued updated RSLs (Regional Screening Levels) in November 2011 for a wide variety of chemicals. Updated methodologies and risk factors (USEPA RAGS-Part F) were incorporated into the USEPA updated RSLs for indoor air. These values are more current than the

CHHSLs that were calculated using pre RAGS-Part F methodology. The 2011 USEPA RSLs should be the applicable standard for the subject property. The commercial indoor air RSL for PCE (Nov. 2011) is 2.1 ug/m^3 for a 10^{-6} risk. CalEPA-DTSC regulates at a 10^{-5} risk level for commercial sites, evidenced by Prop 65, so the applicable indoor air standard for the site is 10 times higher, or 21 ug/m^3 .

The 2011 DTSC vapor intrusion guidance allows calculation of a future indoor air concentration by applying an attenuation factor to the shallow soil gas concentration. The allowable attenuation factor ranges from 0.001 for existing buildings to 0.0005 for new construction. The attenuation factor is multiplied by the soil gas concentration to reveal a target indoor air concentration for the property. At the subject site, $18,000 \text{ ug/m}^3 \times 0.001$ yields a future indoor air concentration of 18 ug/m^3 , which is below the recommended value (21 ug/m^3) for commercial property. Therefore, mitigation of the PCE in shallow soil gas beneath the subject property does not appear warranted.

4.2 SOIL SAMPLING

One boring was excavated and sampled in the vicinity (within 3 feet) of SV2. SV2 had the highest concentration of PCE in shallow soil gas. Soil samples were obtained at depths of 5 and 15 feet and were tested using EPA Method 5035/8260B. The 15-foot soil sample contained 6.9 ug/kg of PCE. The 5-foot sample did not contain detectable concentrations of PCE. The concentration of PCE detected in soil is below applicable clean-up criteria (USEPA RSLs and RWQCB SSLs), however, it appears reasonable to conduct additional soil sampling beneath the northeast corner of the property in the area of the PCE soil gas plume. Only a limited number of samples were tested and additional assessment (soil sampling) would assist in determining if a plume of PCE in soil is present that exceeds applicable clean-up criteria.

4.3 LACDPW FILE REVIEW UNDERGROUND TANK

CE performed review of the file for the subject property maintained by LACDPW on January 3, 2012. The file for 8420 Atlantic Ave contained reports for industrial waste discharge, underground tank removal reports and notices of violation. The underground tank removal report prepared by Conservtech dated September 23, 1987 provides data on the 10,000-gallon underground gasoline tank removed from the subject site in 1987. The plot plan in the Conservtech report shows the tank located

south of building 9. This conflicts with the tank location as indicated in the 2006 Converse Phase I report which shows the tank east of the building. Both locations were evaluated during the soil gas testing by CE. Though low concentrations of benzene and other fuel constituents were found in soil gas near the former tank area the concentrations appear below levels indicative of a significant fuel release. No additional assessment appears necessary for the removed UST.

5.0 NOTICE

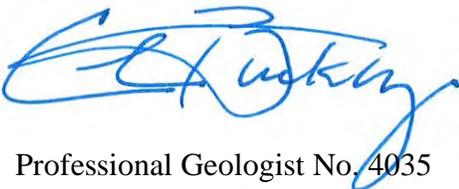

All properties are subject to some element of environmental risk and the risk cannot be eliminated. Industrial and commercial properties developed prior to modern environmental laws are especially risk prone to environmental hazards which include, but are not limited to, wastes which may be toxic, ignitable, corrosive or reactive. The potential for these environmental hazards to impact the use of the property can be reduced by the identification and mitigation of the hazards prior to development or redevelopment of the property. Due to the difficulty in locating underground wastes, in some cases it is not always possible to ascertain that hazardous wastes are present on the property prior to development.

The subsurface conditions described herein have been ascertained from excavations on the site as indicated, and should in no way be construed to reflect variations which may occur between or beyond these excavations. The chemical laboratory testing described herein was performed by a state certified testing laboratory. The state certified testing laboratory assumes responsibility for the testing procedures used in their analysis.

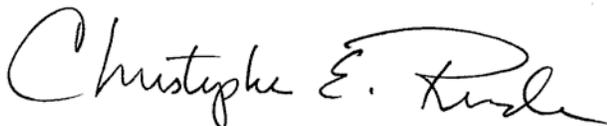

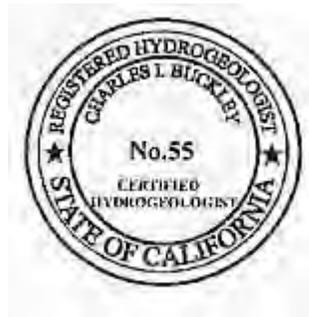

This report was prepared with the skill and competence as commonly used by environmental professionals in this area. No warranty, expressed or implied, of any kind is made or intended in connection with this report, or by the fact you are being furnished this report, or by any other oral or written statement.

Should you have any questions or desire any additional information, please contact the undersigned.

05 January 2012

H&P Project: MC010312-A1
Client Project: 8420 S. Atlantic Ave.

Dear Mr. Hector Rodriguez:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 03-Jan-12 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

J. Villarreal
Janis Villarreal
Laboratory Director

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS
Certificate# 2742, 2745, & 2741 approved for LUFT
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A
Hexachlorobutadiene by EPA TO-15 & TO-14A
1,2,4-Trimethylbenzene by EPA TO-14A
1,2-Dichlorobenzene by EPA TO-15 & TO-14A
1,3,5-Trimethylbenzene by EPA TO-14A
1,4-Dichlorobenzene by EPA TO-15 & TO-14A
Benzene by EPA TO-15 & TO-14A
Chlorobenzene by EPA TO-15 & TO-14A
Ethyl benzene by EPA TO-15 & TO-14A
Styrene by EPA TO-15 & TO-14A
Toluene by EPA TO-15 & TO-14A
Total Xylenes by EPA TO-15 & TO-14A
1,1,1-Trichloroethane by EPA TO-15 & TO-14A
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A
1,1,2-Trichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethene by EPA TO-15 & TO-14A
1,2-Dichloroethane by EPA TO-15 & TO-14A
1,2-Dichloropropane by EPA TO-15 & TO-14A
Bromoform by EPA TO-15
Bromomethane by EPA TO-15 & TO-14A
Carbon tetrachloride by EPA TO-15 & TO-14A
Chloroethane by EPA TO-15
Chloroform by EPA TO-15 & TO-14A
Chloromethane by EPA TO-15 & TO-14A
cis-1,2-Dichloroethene by EPA TO-15
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A
Methylene chloride by EPA TO-15 & TO-14A
Tetrachloroethane by EPA TO-15 & TO-14A
trans-1,2-Dichloroethene by EPA TO-15
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A
Trichloroethene by EPA TO-15 & TO-14A
Vinyl chloride by EPA TO-15 & TO-14A
2-Butanone by EPA TO-15
4-Methyl-2-Pentanone by EPA TO-15
Hexane by EPA TO-15
Methyl tert-butyl ether by EPA TO-15
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

H&P Project: CE010312-10
Client Project: 3156 / 8420 S. Atlantic Avenue

Dear Mr. Charlie Buckley:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 03-Jan-12 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis Villarreal
Laboratory Director

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS
Certificate# 2742, 2745, & 2741 approved for LUFT
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A
Hexachlorobutadiene by EPA TO-15 & TO-14A
1,2,4-Trimethylbenzene by EPA TO -14A
1,2-Dichlorobenzene by EPA TO-15 & TO-14A
1,3,5-Trimethylbenzene by EPA TO -14A
1,4-Dichlorobenzene by EPA TO-15 & TO-14A
Benzene by EPA TO-15 & TO-14A
Chlorobenzene by EPA TO-15 & TO-14A
Ethyl benzene by EPA TO-15 & TO-14A
Styrene by EPA TO-15 & TO-14A
Toluene by EPA TO-15 & TO-14A
Total Xylenes by EPA TO-15 & TO-14A
1,1,1-Trichloroethane by EPA TO-15 & TO-14A
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A
1,1,2-Trichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethene by EPA TO-15 & TO-14A
1,2-Dichloroethane by EPA TO-15 & TO-14A
1,2-Dichloropropane by EPA TO-15 & TO-14A
Bromoform by EPA TO-15
Bromomethane by EPA TO-15 & TO-14A
Carbon tetrachloride by EPA TO-15 & TO-14A
Chloroethane by EPA TO-15
Chloroform by EPA TO-15 & TO-14A
Chloromethane by EPA TO-15 & TO-14A
cis-1,2-Dichloroethene by EPA TO-15
cis-1,2-Dichloropropene by EPA TO-15 & TO-14A
Methylene chloride by EPA TO -15 & TO-14A
Tetrachloroethane by EPA TO-15 & TO-14A
trans-1,2-Dichloroethene by EPA TO-15
trans-1,2-Dichloropropene by EPA TO-15 & TO-14A
Trichloroethene by EPA TO-15 & TO-14A
Vinyl chloride by EPA TO -15 & TO-14A
2-Butanone by EPA TO-15
4-Methyl-2-Pentanone by EPA TO-15
Hexane by EPA TO-15
Methyl tert-butyl ether by EPA TO-15
Vinyl acetate by EPA TO-15

This certification applies to samples analyzed in summa canisters.

HAZARDOUS MATERIALS UNDERGROUND STORAGE

CLOSURE PERMIT NO. 3157B

FACILITY LOCATION: 8420 S. Atlantic Blvd.

This office has reviewed the soil/groundwater assessment report/letter submitted
on October 27, 1989 required as a part of the subject closure procedure.
Based on the information submitted, we find that:

- [x] The closure is final and no further action is required.
[] The soils removed during the tank excavation are unrestricted and may be
used as backfill material. The closure is final and no further action is
required.
[] Excavated soils may be a hazardous waste and are not suitable for fill
material or disposal on-site. Contaminated soils must be manifested,
transported and disposed of pursuant to Chapter 6.5, California Health and
Safety Code, unless evidence is presented indicating that disposal is proper
at a less restricted facility. Copies of completed manifests or other
appropriate evidence indicating legal disposal shall be submitted to this
office before this project can be considered closed.
[] The permanent closure of the tank(s) in place shall comply with requirements
set by the local Fire Department. Verification must be submitted to this
office indicating proper closure and completion of all work.

[] Other

If you have any questions concerning this matter, please contact Mr. John
Awujo at (818) 458-3507.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

Nature of complaint (violation) Check # of tanks existing or removed?
Name of owner/operator? Are sights one & the same?
Any tanks exist at 4827 or 4819 Patata St.?
Special Instructions Investigate

REPORT: (Narrative description of observations including physical condition of site, types of materials and chemicals, trade names, extent of waste flow, damage observed, statements of witnesses, preventive measures taken, location of sample points and directives given to alleged discharger.)

On Tues Apr. 6, 1992 I investigated the site. I immediately went to the main offices of M. Stephens Mfg. located at 8420 S. Atlantic Bl. Mr. Sam Friedman welcomed me and asked what I needed to know or investigate. I explained to him the nature of my visit and he proceeded to explain some discrepancies with my files. First, 8420 Atlantic (I-877-24) & 4839 Patata (I-11513-24) are owned by the same corporation (M. Stephens Mfg.). Second, 1-10,000 gal tank was removed from (I-877-24) and 1-1500 & 1-500 gal tank were removed from (I-11513-24). No other tanks exist at these sites or any other neighboring sites such as 4827 or 4819 Patata.

The Owner/operator of both sites is M. Stephens Mfg. Inc (OVER)

HAZARDOUS MATERIALS UNDERGROUND STORAGE

CLOSURE PERMIT NO. 3157B

FACILITY LOCATION: 8420 S. Atlantic Blvd.

This office has reviewed the soil/groundwater assessment report/letter submitted on October 27, 1989 required as a part of the subject closure procedure. Based on the information submitted, we find that:

- The closure is final and no further action is required.
- The soils removed during the tank excavation are unrestricted and may be used as backfill material. The closure is final and no further action is required.
- Excavated soils may be a hazardous waste and are not suitable for fill material or disposal on-site. Contaminated soils must be manifested, transported and disposed of pursuant to Chapter 6.5, California Health and Safety Code, unless evidence is presented indicating that disposal is proper at a less restricted facility. Copies of completed manifests or other appropriate evidence indicating legal disposal shall be submitted to this office before this project can be considered closed.
- The permanent closure of the tank(s) in place shall comply with requirements set by the local Fire Department. Verification must be submitted to this office indicating proper closure and completion of all work.

ADDITIONAL CLOSURE REQUIREMENTS

The additional information or requirements checked below must be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 4089, Los Angeles, CA 90051, in order to complete the evaluation of Closure Permit No. 3157B.

- Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
- Insufficient number of samples were obtained. Additional samples required in accordance with attached Closure Permit Requirements.
- Describe method of obtaining, handling, and/or transporting samples.
- Indicate time and date samples were obtained.
- Submit logs certified by a CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils for all borings.
- Submit chain-of-custody documentation initiated by person obtaining sample through person at DOHS certified laboratory.
- Disposal destination of tanks and evidence of legal disposal.
- Analysis results by a State certified laboratory shall be submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
- Documentation as to depth of groundwater at facility.
- Manifests to document hazardous waste disposal of removed soil.
- Signature on the report is required of CA Registered Geologist, CA Certified Engineering Geologist, or CA Registered Civil Engineer with sufficient experience in soils.
- Define the vertical and lateral extent of contamination.
- Propose a remedial action plan to mitigate contamination.
- Other _____

Subject: Underground Storage Tank Removal
8420 S. Atlantic Boulevard, Cudahy
(September 1987)

Gentlemen:

Enclosed is a copy of letter dated March 23, 1989 from the County of Los Angeles, Department of Public Works, Waste Management Division concerning evidence of legal disposal of subject underground storage tank.

As indicated in Conservtech's Closure Report dated September 23, 1987, the subcontractor (Kent and Son) removed the tank from the site and transported it to 428 W. 132nd Street, Gardena. To satisfy the County request it will apparently be necessary for Mr. Kent to provide some form of documentation concerning his disposal of this tank.

As I recall, we did discuss the matter of State and County requirements concerning tank disposal with your subcontractor. However, Conservtech did not receive any written confirmation of ultimate disposal.

It is requested that you discuss this matter with Kent and Son and arrange for a response direct to the County. Please feel free to call to discuss this matter if there are any questions.

Very truly yours,

Larry W. Adams

NOTICE OF NONCOMPLIANCE
HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT (HMUSP)
FACILITY AT: 8420 S. Atlantic Blvd.

You were notified on November 20, 1987 to submit to this office on or before December 22, 1987 the item(s) checked below:

- HMUSP application and/or accompanying fees.
- Tank integrity test results for the underground containers at the above location.
- Leak Detection Program (LDP). Tank Monitoring Program (TMP).
- LDP/TMP corrections. LDP/TMP final report.
- Assessment report following closure of the following containers: _____
- Site investigation proposal. Remedial action plan.
- Progress report for the month of _____.
- Other Evidence of legal disposal for a 10,000 gallon gasoline tank removal under permit 31578.

As of this date, our records show that you have not responded. Please be advised that the required information must be submitted to this office by May 31, 1989. Failure to comply with this notice will result in the initiation of enforcement measures.

If you have any questions concerning this matter, please contact Ms. Nicole Long of this office at (818) 458-3512.

Very truly yours,

T. A. TIDEMANSON

Closure Report con't (Closure Permit No. 3157-B)
Page 2

- (4) As indicated on the Chain-of-Custody form, soil Sample No. 1 (SP-A) was obtained at 8:45 a.m., Sample No. 2 (SP-B) was obtained at 9:10 a.m. on September 17, 1987.
- (5) Soil borings were not required at this site.
- (6) Chain-of-Custody documentation for the two soil samples is enclosed.
- (7) The tank was disposed of by delivery to KENT AND SON at their facility located at 428 W. 132 St., Gardena, CA.
- (8) Copies of the results of analyses of the soil samples by Associated Laboratories are enclosed.
- (9) Groundwater was not encountered in the excavations. Groundwater elevation maps prepared by the Los Angeles County Flood Control District (Fall 1984) indicate that ground water is at a depth of approximately 200 feet below the ground surface in the vicinity of this site. This depth is further confirmed in the report titled "Annual Survey Report on Ground Water Replenishment", 1987, Plate 1 "Location Map and Deep Aquifer Ground Water Contours", November, 1986 prepared for Central and West Basin Water Replenishment District.

This area is underlain by fine-grained silty sands, sandy silts and clay. Sandy lenses which occur in the subsurface are generally discontinuous and are relatively thin.
- (10) No soil was removed from the property.
- (11) Ground surface above tank was and is paved. At the time of tank excavation, the pavement exhibited a minimum of cracks and separations. Soils immediately below the paving and above as well as around the tank appeared to be fairly consistent in texture and color (medium brown). No evidence of any spills or soil contamination existed around the tank other than a minor discoloration of the soil area immediately around the filler neck of the tank. A sample of soil was taken from near the filler and analyzed in the field by use of a portable hydrocarbons detector. The instrument did not register the presence of hydrocarbons.

Los Angeles County
Department of Public Works
Waste Management Division

Closure Report con't (Closure Permit No. 3157-B)
Page 3

A clay layer was found at approximately 2.5 to 3 feet below the tank. This layer was left undisturbed. The soil above this layer appeared normal in color, had no noticeable odor, nor did it contain noticeable moisture.

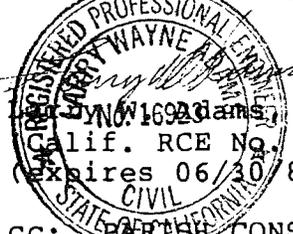

Soils from immediately above the clay were also checked with a portable hydrocarbons tester with no hydrocarbons being detected.

- (12) Based on the levels of petroleum hydrocarbons reported to be contained in the soil samples, it is recommended that remedial action to mitigate contamination at this site is not required, It is recommended that the Contractor be authorized to backfill the excavations.

Please feel free to contact the undersigned if there are any questions concerning the above Closure Report.

Respectfully submitted,

Closure Permit
 No. 3157 B
 File No.
 I-877-2Y

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.
2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
<u>A</u>	<u>2 feet below tank level</u>	<u>TPHC</u>	<u>EPA 8015</u>
<u>B</u>	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.
4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.
5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).
6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.
7. All soil/groundwater samples obtained shall be handled and transported to a laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.
8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.
9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

NOTICE TO TANK REMOVAL CONTRACTORS

Gentlemen:

The Department of Public Works, Waste Management Division, is in the process of revising the permit application forms for closure of hazardous material underground storage facilities. The new forms will carry the following information notice:

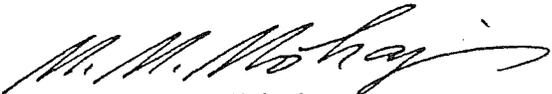

"Contaminated tanks and residues that may be left in tanks to be closed may be a hazardous waste which must be transported and disposed of pursuant to Chapter 6.5, California Health and Safety Code. Failure to comply may be prosecuted as a felony violation."

Contractors engaged in the removal of tanks are cautioned that the above information notice reflects established State law and applies equally to all current and outstanding closure permits issued by this office.

Your cooperation in the safe disposal of hazardous materials is appreciated.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 4089, Los Angeles, CA 90051 containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
3. Description of methods for obtaining, handling and transporting samples.
4. Time and date samples were obtained.
5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.
6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil.
11. Any observations of site contamination.
12. Remedial action plan to mitigate contamination.
13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.

CONDITIONS A -- GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer-Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.
2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:
 - a. Removal of tank shall require a three (3) business day advance notification.
 - b. Permanent closure of a tank in place of a temporary closure shall require a 30 day written notification.

3. The fee is \$141 for the first tank plus \$38 for each additional tank.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74-81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

- a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
- b. The personnel shall be sufficiently skilled to safely carry out such operation.
- c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
- d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B -- TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable parts.
2. A temporary closure shall not exceed 90 days.

CONDITIONS C -- PERMANENT, TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Part D and any other applicable parts.
2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.
3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.
4. If an appointment has been arranged with a County Engineer inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.
5. After inspection, tanks shall be transported to a legal disposal point.
6. If the tank had stored materials other than motor fuel, fuel oil, or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.
7. The site shall be backfilled and recomacted to a relative compaction of 90%.

CONDITIONS D -- PERMANENT, TANK(S) IN PLACE

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A -- Inspection Guide #6, Parts B or C, and any other applicable parts.
2. Owners/operators shall demonstrate part site integrity as follows:
 - a. Test borings shall be slant drilled to intersect a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test borings may be drilled vertically and the reason stated in the report in 2-h. below.
 - b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
 - c. For multiple tanks, as a minimum, borings shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
 - d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
 - e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
 - f. Soil samples shall be capped immediately with teflon or aluminum.
 - g. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
 - h. A report containing the results of the above analysis shall be submitted to the County Engineer.
3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials -- Guidelines."
4. A report shall be submitted to the County Engineer containing the results of the site investigation.

NOTICE TO TANK REMOVAL CONTRACTORS

Gentlemen:

The Department of Public Works, Waste Management Division, is in the process of revising the permit application forms for closure of hazardous material underground storage facilities. The new forms will carry the following information notice:

"Contaminated tanks and residues that may be left in tanks to be closed may be a hazardous waste which must be transported and disposed of pursuant to Chapter 6.5, California Health and Safety Code. Failure to comply may be prosecuted as a felony violation."

Contractors engaged in the removal of tanks are cautioned that the above information notice reflects established State law and applies equally to all current and outstanding closure permits issued by this office.

Your cooperation in the safe disposal of hazardous materials is appreciated.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

CLOSURE PERMIT SUPPLEM T
 HAZARDOUS MATERIALS UNDERGROUND STORAGE
 LOS ANGELES COUNTY
 DEPARTMENT OF PUBLIC WORKS
 WASTE MANAGEMENT DIVISION
 2250 ALCAZAR STREET
 LOS ANGELES, CALIFORNIA 90033

Closure Permit
 No. 3157 B
 File No.
 I-877 -2Y

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application fo Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.
2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
<u>A</u>	<u>2 feet below tank invert</u>	<u>☒ TOHC</u>	<u>EPA 8015</u>
<u>B</u>	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.
4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.
5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).
6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.
7. All soil/groundwater samples obtained shall be handled and transported to a laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.
8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.
9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 4089, Los Angeles, CA 90051 containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
3. Description of methods for obtaining, handling and transporting samples.
4. Time and date samples were obtained.
5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.
6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil.
11. Any observations of site contamination.
12. Remedial action plan to mitigate contamination.
13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.

60th Anniversary

1946 - 2006

May 21, 2007

Mr. Fred Wasson
Elden Holding Group, LCC
15206 Ventura Boulevard, Suite 306
Van Nuys, California 91403

Subject: PHASE III REMEDIATION
8420 South Atlantic Avenue and 4819-4839 Patata Street
Cudahy, California
Converse Project No. 05-16-215-05

Mr. Wasson:

Converse Consultants (Converse) is pleased to submit this report summarizing the findings and results of remedial actions conducted at 8420 South Atlantic Avenue and 4819-4839 Patata Street, Cudahy, California (Site). See Figure 1, *Site Location Map*. Remedial actions included the excavation and disposal of soil impacted with Total Petroleum Hydrocarbons (TPH). In general accordance with our revised proposal dated April 26, 2007 remedial actions were completed between May 10 and May 18, 2007.

Background

Based on the information provided in the Phase I Environmental Site Assessment (ESA) dated August 25, 2003 by A/E West Consultants for the Site, and a site visit conducted by Converse personnel on Tuesday, September 6, 2005, further assessment appeared to be warranted.

Converse has completed two Phase II Environmental Site Assessments at the Site. The analytical results of soil samples collected during these investigations indicated concentrations of TPH as heavy hydrocarbons (C22-C36) ranging from 11 milligrams per kilogram (mg/kg) to 40,000 mg/kg. TPH concentrations in two of the samples were above the Maximum Soil Screening Level (MSSL) presented in the Los Angeles Regional Water Quality Control Board (LARWQCB) Interim Site Assessment & Cleanup Guide Book, May 1996, of 10,000 mg/kg for heavy range hydrocarbons in soil 20 to 150 feet above groundwater.

At boring location GP-8, the sample at 2 feet below the ground surface (bgs) had a TPH concentration of 40,000 mg/kg. The sample from GP-8 at 5 feet bgs had no detectable concentration of TPH; therefore, the vertical extent of the TPH-impacted soil at location

GP-8 was estimated to be less than 5 feet bgs. The sample from 2 feet bgs at boring location GP-7, which is approximately 10 feet to the south of GP-8, had a TPH concentration of 27,200 mg/kg. The sample from GP-7 at 5 feet bgs had no detectable concentration of TPH. The vertical extent of contamination at this location was also estimated to be less than 5 feet bgs. The locations of these borings, as well as other borings previously completed at the Site, are presented on Figure 2. See the Converse Consultant's Limited Phase II Environmental Site Assessment Reports dated October 6, 2005 and November 11, 2005 for details of the previous assessment activities and results.

On November 15, 2005 Converse completed additional characterization of the TPH-impacted soil in the area of borings GP-7 and GP-8 by advancing 12 additional borings (GP-34 through GP-45), at distances of 5 and 10 feet from the original borings, to depths of 10 feet bgs. Results of this additional characterization work aided in defining the vertical and horizontal extents of TPH-impacted soil in the vicinity of GP-7 and GP-8, as shown on Figure 3.

Based on the results of the previous assessment activities, Converse recommended the removal of the soil impacted with hydrocarbon concentrations above the MSSLS in the vicinity of borings GP-7 and GP-8 prior to the purchase of the site.

Objective

The objective of these remedial actions were to excavate and properly dispose of the TPH-impacted soil in the vicinity of borings GP7 and GP8.

Technical Approach

To accomplish the objective, Converse performed the following work:

- Prepared of a site specific Health and Safety Plan.
- Conducted a site walk to observe the existing operating conditions at the facility, marked areas of excavation and contacted Underground Service Alert.
- Saw cut and removed approximately 300 square feet of asphalt and concrete in the immediate area of borings GP-7 and GP-8. See Figure 2, *Area of Excavation Map*. Asphalt and concrete were removed from the Site and sent an appropriate facility for recycling.

- Excavated soil from two areas each measuring approximately eight (8) feet wide by eight (8) long by four and a half (4.5) feet deep. These areas were centered on GP-7 and GP-8.
- Loaded all TPH-impacted soil in trucks for disposal at an appropriate recycling facility.
- Collected and analyzed nine (9) confirmation samples from the areas of excavation to verify that all TPH-impacted soil had been removed to below the MSSLs.
- Soil samples were collected with mechanical equipment and by hand in glass jars, labeled, and refrigerated on ice for transport to a California-certified laboratory.
- Soil samples were analyzed in accordance with EPA Method 8015M – TPH carbon chain (cc) on an overnight turnaround time.
- Converse observed standard United States EPA protocol, including chain-of-custody documentation. Sampling equipment was cleaned with a phosphate-free cleanser prior to sampling, and between borings to minimize the potential for cross-contamination.
- Upon completion of soil confirmation sampling, the excavations were backfilled with self-compacting slurry and ground surface was restored with approximately four (4) inches of asphalt to match the existing surrounding surface.
- Prepared this report presenting a summary of the remedial actions and laboratory results. Services provided were done under the responsible charge of a California Professional Geologist.

Description of Remedial Activities

On May 10, 2007, Converse arrived at the Site and was provided access by Mr. Wasson. The removal subcontractor, NRC Environmental Services (NRC) arrived on Site and brought in two roll off bins. Converse measured and marked off the approximate areas to be excavated, and an approximately 15-foot by 20-foot area around the TPH-impacted soil was saw cut and removed. TPH impacted soil was removed from the areas around borings GP-7 and GP-8 in one large excavation measuring approximately eight (8) feet wide, by eighteen (18) feet long, by four and a half (4.5) feet deep. The excavated soil was transferred directly into the roll off bins for disposal at Thermal Remediation Solutions in Azusa, California. Four (4) confirmation samples were collected from the excavation

centered around GP-7 and five (5) confirmation samples were collected from the excavation centered around GP-8 (see Figure 3, *Area of Excavation Map*). All of the confirmation soil samples were sealed, labeled, placed in a chilled cooler and transported to Associated Laboratories in Orange California, a State Certified laboratory, under chain-of-custody documentation for analysis.

Results of the confirmation samples were received on May 11, 2007. The confirmation sample concentrations of TPH were reported as not detected (ND) in all samples except for confirmation sample GP8-E, which was reported to have a TPH concentration in the heavy hydrocarbon range (C22-C36) of 13 mg/kg. Based on these results, it was concluded that no additional excavation would be necessary. The complete laboratory analytical report is provided in Appendix A.

Following the receipt and review of confirmation samples analytical results the excavation was backfilled with approximately 20 cubic yards of 3-sack, self-compacting slurry up to approximately four (4) inches below the surrounding asphalt surface.

On May 18, 2007, Converse and NRC returned to the site to load the remaining concrete debris in a 10 wheel dump truck. The two roll off bins that had been filled with the TPH-impacted soil were removed from the Site that same day and disposed of at Thermal Remediation Solutions in Azusa, California (for disposal manifest please see Appendix B). The remainder of the excavation was then re-surfaced with asphalt.

Conclusions and Recommendations

Based on the completion of the remedial activities and the laboratory analytical results of confirmation soil samples, Converse presents the following summary of results for soils remaining at the Site:

- TPH concentrations in all of the confirmation samples were below the MSSLS. The only concentrations of TPH reported in any of the samples was from location GP8-E at a concentration of 13 mg/kg in the heavy hydrocarbon range (C22-C36).
- Approximately 27.93 tons of TPH impacted soil was removed from the Site and transported to Thermal Remediation Solutions in Azusa, California.
- Results of the delineation and confirmation samples reveal that all soil at the Site impacted with TPH has been removed and properly disposed of. Therefore, no further remediation at the Site with regard to TPH in soil is warranted at this time.

Closure

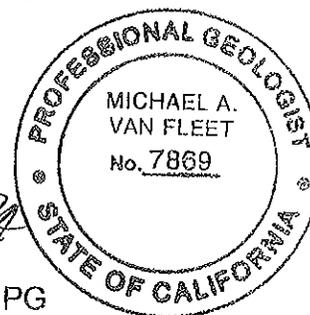

This report has been prepared for the exclusive use of Mr. Fred Wasson of Elden Holding Group, LCC in accordance with the terms and conditions under which these services were provided. Any reliance on this report by third parties shall be at third party's sole risk. Our services have been performed in accordance with applicable state and local ordinances, and generally accepted practices in the geosciences. No other warranty, either express or implied, is made. Converse Consultants is not responsible or liable for any claims or damages associated with the accuracy or completeness of information provided by others. Site exploration identifies actual subsurface conditions only at those points where samples are taken, when they are taken. Data derived through sampling and analytical testing are extrapolated by geoscientists, who then render an opinion about overall subsurface conditions. Actual conditions in the areas not sampled may differ from the predictions. This report should not be regarded as a guarantee that no further contamination, beyond that which was detected and remediated in our work, is present beneath the property. In the event that changes to the property occur, or additional, relevant information about the property is brought to our attention, the recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the recommendations of this report are modified in writing.

If you have questions or comments relative to the findings presented herein, please call, William Ragsdale at (951) 264-5145 or Michael Van Fleet at (626) 930-1267.

1.0 INTRODUCTION

1.1 Regulatory Background

Under the authority of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), Weston Solutions, Inc. (WESTON®) has been tasked to conduct a Preliminary Assessment (PA) of the M. Stephens Manufacturing, Inc. (M. Stephens) site in Cudahy, Los Angeles County, California.

The purpose of a PA is to review existing information on a site with potential releases of a hazardous substance and its environs to assess the threats, if any, posed to public health, welfare, or the environment and to determine if further investigation under CERCLA is warranted. The scope of a PA generally includes review of existing information available from federal, state, and local agencies.

Using existing information sources, a site is then evaluated using the U.S. Environmental Protection Agency's (EPA) Hazard Ranking System (HRS) criteria to assess the relative threat associated with actual or potential releases of hazardous substances at the site. The HRS has been adopted by the EPA to help set priorities for further evaluation and eventual remedial action at hazardous substance sites. The HRS is the primary method of determining a site's eligibility for placement on the National Priorities List (NPL). The NPL is a list compiled by EPA of uncontrolled hazardous substance releases in the United States that are priorities for long-term remedial evaluation and response. This report summarizes the findings of these preliminary investigative activities.

The M. Stephens site was identified as a potential hazardous waste site and entered into the Superfund Enterprise Management System (SEMS) in approximately September 2013 (SEMS ID No.: CAN000909569). The SEMS information system is currently in the development phase and is expected to be fully implemented in April 2015 (DTSC, 2013).

More information about the Superfund program is available on the EPA web site at http://www.epa.gov/superfund/programs/npl_hrs/siteasmt.htm.

1.2 Apparent Problem

EPA determined that a PA was needed at the M. Stephens site because of the following apparent problems:

- The site has been used for metal fabrication, electric parts manufacturing, tool manufacturing, and die-cast electrical parts manufacturing from approximately the late 1940s through 2003. Specific on-site activities, hazardous substances, and hazardous substance management practices are not known. Tetrachloroethylene (PCE) -containing waste was generated at the site during at least the late 1980s and in 1999 (CC, 2005; DPW, 2007; DTSC, 2013; EDR, 2014a; EDR, 2014b; EDR, 2014c; EPA, 2014b; LACSD, 1992; TCN, 2014).

- Process wastewaters generated during on-site activities were historically treated using a sub-grade clarifier system until approximately 2003; it is not known when the clarifier system was installed (DPW, 2007; LACSD, 2003).
- A subsurface investigation conducted at the site in 2005 identified detectable concentrations of PCE in shallow soil beneath the site (CC, 2005).
- The site is situated upgradient with respect to the regional groundwater flow from several municipal supply wells that have been identified with elevated concentrations of volatile organic compounds (VOCs). The site is located approximately 0.17 mile north-northwest of the City of South Gate's Well 7, which was removed from service in approximately 2002 and destroyed in 2011 due primarily to elevated concentrations of contaminants, including trichloroethylene (TCE), arsenic, and chromium. The site is also located approximately 0.28 mile west-southwest of the Golden State Water Company (GSWC) - Bell/Bell Gardens system's Hoffman Well 02, which was removed from service in approximately late 2000 and destroyed in approximately October 2007 due primarily to elevated concentrations of chromium (DTSC, 2013; Google, 2014; RWQCB, 2015; Appendix C-2, C-3).

2.0 SITE DESCRIPTION

2.1 Location

The M. Stephens site is located at 8420 South Atlantic Avenue, Cudahy, California. Additional addresses associated with the site property include 8414 South Atlantic Avenue and 4727, 4805, 4817, 4831, and 4839 Patata Street. The geographic coordinates for the site are 33° 57' 22.4" North latitude and 118° 10' 59.5" West longitude (Appendix A). The location of the site is shown in Figure 1.

2.2 Site Description

The M. Stephens site occupies approximately 5.9 acres in an urban industrial area. The site is bordered to the north by a tractor trailer service station [Spirit (ITL Inc.) Truck Stop], a trucking company (R Espinoza Trucking), and a door/roof hatch/skylight manufacturing facility (Dur-Red). The site is bordered to the west across S. Atlantic Avenue by a commercial fueling station (Roche Fuel Stop), a non-destructive testing facility and commercial retail spaces [General Inspection Laboratories (GENIL) site - EPA ID No.: CAD027897164]. The site is bordered to the south by the Southern Pacific railroad easement with a freight distribution terminal (Performance Team Freight Systems) beyond. The site is bordered to the east by the Cudahy Industrial Center (various light industrial suites, fitness, etc.) (Google, 2014; LACA, 2014).

This site is composed of eight distinct Los Angeles County Assessor Parcels, which are identified as: 6224-034-010, -014, -032, -036, -037, -039, -040, and -041. As of April 2014, the only significant structure at the site was the former M. Stephens Manufacturing Building, which occupied approximately 19,400 square-feet (ft²) at the southwestern portion of the site. A heavily-weathered asphalt-paved parking lot was located adjacent-south to the building and several utility poles were located throughout the property. With the exception of the parking lot, the surface of the site was covered in a mixture of weathered concrete, asphalt, and exposed soil. The parcel layout and site layout are shown in Figure 2 and Figure 3, respectively (DTSC, 2013; Google, 2014; LACA, 2014).

The site has been developed since at least 1923, at which time it was occupied by agricultural fields and single-family residential buildings. Between 1938 and approximately 1950, the northern and eastern portions of the site were redeveloped to accommodate several manufacturing, warehousing, and office buildings. Industrialization of the site continued through the 1950s and early 1960s, and by 1966 only a single residential building remained alongside at least 13 distinct industrial buildings. By 1972, the remaining residential building was removed and there were no significant changes in the configurations of the on-site buildings until approximately 1987, at which time the existing M. Stephens Manufacturing Building was constructed at the former location of a smaller warehouse building. With the exception of the existing building, all of the significant structures at the site were removed between July 2008 and June 2009. The historic site layout is shown in Figure 4 (EDR, 2014a, EDR, 2014b, Google, 2014; LACA, 2014).

At least three underground storage tanks (USTs) were historically located at the site. An approximately 1,500-gallon UST and a 500-gallon UST, as well as an oil-filled car-hoist, were located at the southeastern portion of the site adjacent south to the former Jackson Iron Works Building. These two USTs were removed in November 1989 and the car-hoist was removed in August 1995. An additional 10,000-gallon UST was historically located adjacent south of the southeastern corner of the existing M. Stephens Manufacturing Building. This tank was removed at an unidentified date prior to 1992. A subgrade clarifier was historically located approximately 115 feet northeast of the existing M. Stephens Manufacturing Building. The clarifier was removed in May 2007 (CoC, 2005; DPW, 2007; LACSD, 1992; RWQCB, 1995).

2.3 Operational History

The M. Stephens site is currently owned by three corporate entities that include: the Cudahy Economic Development Corporation, which owns the four southwestern parcels (6224-034-014, -032, -040, and -041); Tssay J and R LLC, which owns the two eastern parcels (6224-034-010 and -036); and Patata Investments LLC, which owns the two northern parcels (6224-034-037 and -039). Tssay J and R LLC and Patata Investments LLC are affiliated real estate investment corporations and may act as a single entity as they share a primary owner. The site has been owned by various real estate investment corporations since approximately 1997, which include, but may not be limited to: BBA Southwood LLC, Carmar LLC, Patata Streets LLC, and Agora Realty & Management. Between approximately December 1986 and December 1996, the site was owned by M. Stephens Manufacturing Inc./BWF Manufacturing. Ownership information prior to 1986 is not known (AR&M, 2006; BPA, 2014c; CoC, 2005; DTSC, 2013; App. C-1).

Historic operations at the site include residential and agricultural activities from approximately 1900 to the late 1940s; metal fabrication, electric parts manufacturing, and tool manufacturing from approximately the late 1940s through the mid-1980s; and die-cast electrical parts manufacturing from approximately 1986 through 2003. With the exception of some miscellaneous storage of tractor-trailers in late 2009, there have been no known operations conducted at the site since 2003 (EDR, 2014a; EDR, 2014b; EDR, 2014c; Google, 2014; TCN, 2014).

Table 1: Current and Historic On-site Operators

Location	Operator	Primary Operations	Date
East Site (6224-034-010)	Jackson Iron Works	Metal fabrication	~1948 ~ 1971
	Grating Pacific	Metal fabrication	~1981 - 1986
	Plasma Specialist	Metal fabrication	~1981 - 1986
Southeast Site [6224-034-036 (south)]	Patata Engineered Wire & Metal Mfg.	Metal fabrication	~1952
	Automatic Instrument Service	Instrument Control Device Repair	~1958 ~ 1965
Central Site [6224-034-014 (north); 6224-034-036 (central)]	Martin Electric Motors	Electric Parts Service and Sales	~1952 ~ 1965
	Jackson Iron Works	Metal fabrication	~1965
Southwest Site [6224-034-032; 6224-034-041 (southern)]	Martin Electric Motors	Electric equipment storage	~1955 ~ 1968
Northern and west-central Site [6224-034-037, -039, -040; 6224-034-010, -036, -041 (northern)]	Greer Machine Company	Machining and aluminum casting	~1955 ~ 1962
	Pratt & Whitney Tool Co.	Tool Manufacturing	~1962 ~ 1975
	Trico Superior	Metal Tank Manufacturing	~1965 - 1980
	Sierra Tank & Construction Co.	Metal Tank Manufacturing	1980 ~ 1985
Site-wide	<i>Unknown</i>	Residential and Agriculture	~1900 ~ 1948
	M. Stephens Manufacturing Co.	Metal electrical equipment mfg.	1986 - 2003
	<i>Unknown</i>	Tractor-trailer storage	2009
References: BPA, 2014b; EDR, 2014a; EDR, 2014b; EDR, 2014c; Google, 2014; ISN, 1959; TCN, 2014; TSD, 1980.			

At the easternmost portion of the site, including the entirety of parcel 6224-034-010, the Jackson Iron Works metal fabrication facility operated from approximately the late 1940s to at least 1971. No additional significant information is known regarding specific on-site operations or hazardous substances associated with these metal fabrication activities. Grating Pacific, Inc. and Plasma Specialists, Inc. also conducted metalworking activities at this portion of the site between approximately 1981 and 1986. Jackson Iron Works, Grating Pacific, and Plasma Specialists were addressed at 4831 Patata Street (BPA, 2014a; EDR, 2014b; EDR, 2014c; ISN, 1959).

At the southeastern portion of the site, the southern portion of parcel 6224-034-036 was historically used by the Patata Engineered Wire & Metal Manufacturing Company for metal fabrication activities in the early 1950s and by the Automatic Instrument Service Company for the repair of instrument control devices in the late 1950s through mid-1960s. Both of these businesses were addressed at 4727 Patata Street (EDR, 2014b; EDR, 2014c).

At the central portion of the site, the northern portion of parcel 6224-034-014 and the central portion of 6224-034-036 were historically used by the Martin Electric Motors company to conduct electric parts service and sales operations during the early 1950s through mid-1960s. The adjacent Jackson Iron Works facility apparently expanded into this area during the mid-1960s and utilized at least two large overhead crane-ways. Martin Motors was addressed at 4817 Patata Street in at least 1951 (EDR, 2014b; EDR, 2014c).

At the southwestern portion of the site, the entirety of parcel 6224-034-032 and the southern half of parcel 6224-034-041 were used by the Martin Motors company for electrical equipment storage from the mid-1950s through at least the late 1960s. On-site electrical equipment appears to have included electrical transformers. Martin Motors was addressed at 4805 Patata Street from at least 1958 through 1967 (EDR, 2014b; EDR, 2014c).

At the west-central and northern portions of the site; which includes the entirety of parcels 6224-034-037, -039, and -040 as well as the northern sections of parcels 6224-034-010, -036, and -041; the property was used for machining, aluminum casting, and retail operations during the 1950s and into the early 1960s. From 1958 to at least 1962, machining operations were conducted by the Greer Machine Company, which was addressed at 8414 Atlantic Ave. From approximately 1962 to the mid-1970s, the area was used for tool manufacturing by the Pratt & Whitney Tool Division of Colt Industries. From approximately the mid-1960s to the mid-1980s, the area was used for tank manufacturing by Trico Superior (until 1980) and then by the Sierra Tank and Construction Company. Pratt & Whitney, Trico, and Sierra Tank were typically addressed at 8420 Atlantic Avenue (BPA, 2014b; EDR, 2014b; EDR, 2014c; TSD, 1980).

In 1986, operations across the entirety of the site were converted over to the manufacturing of metal electrical equipment; primarily die-cast, weatherproof, outlet boxes; by the M. Stephens Manufacturing Company. M. Stephens Manufacturing, along with their BWF product line, was acquired by Intermatic, Inc. in 1997. In 2003, on-site operations were discontinued and consolidated into Intermatic's facility in Tijuana, Mexico. M. Stephens/BWF was later acquired by the Teddico Electrical Company; however the specific details of this acquisition are not known. M. Stephens was typically addressed at 8420 Atlantic; however, 4839 Patata also appears to have

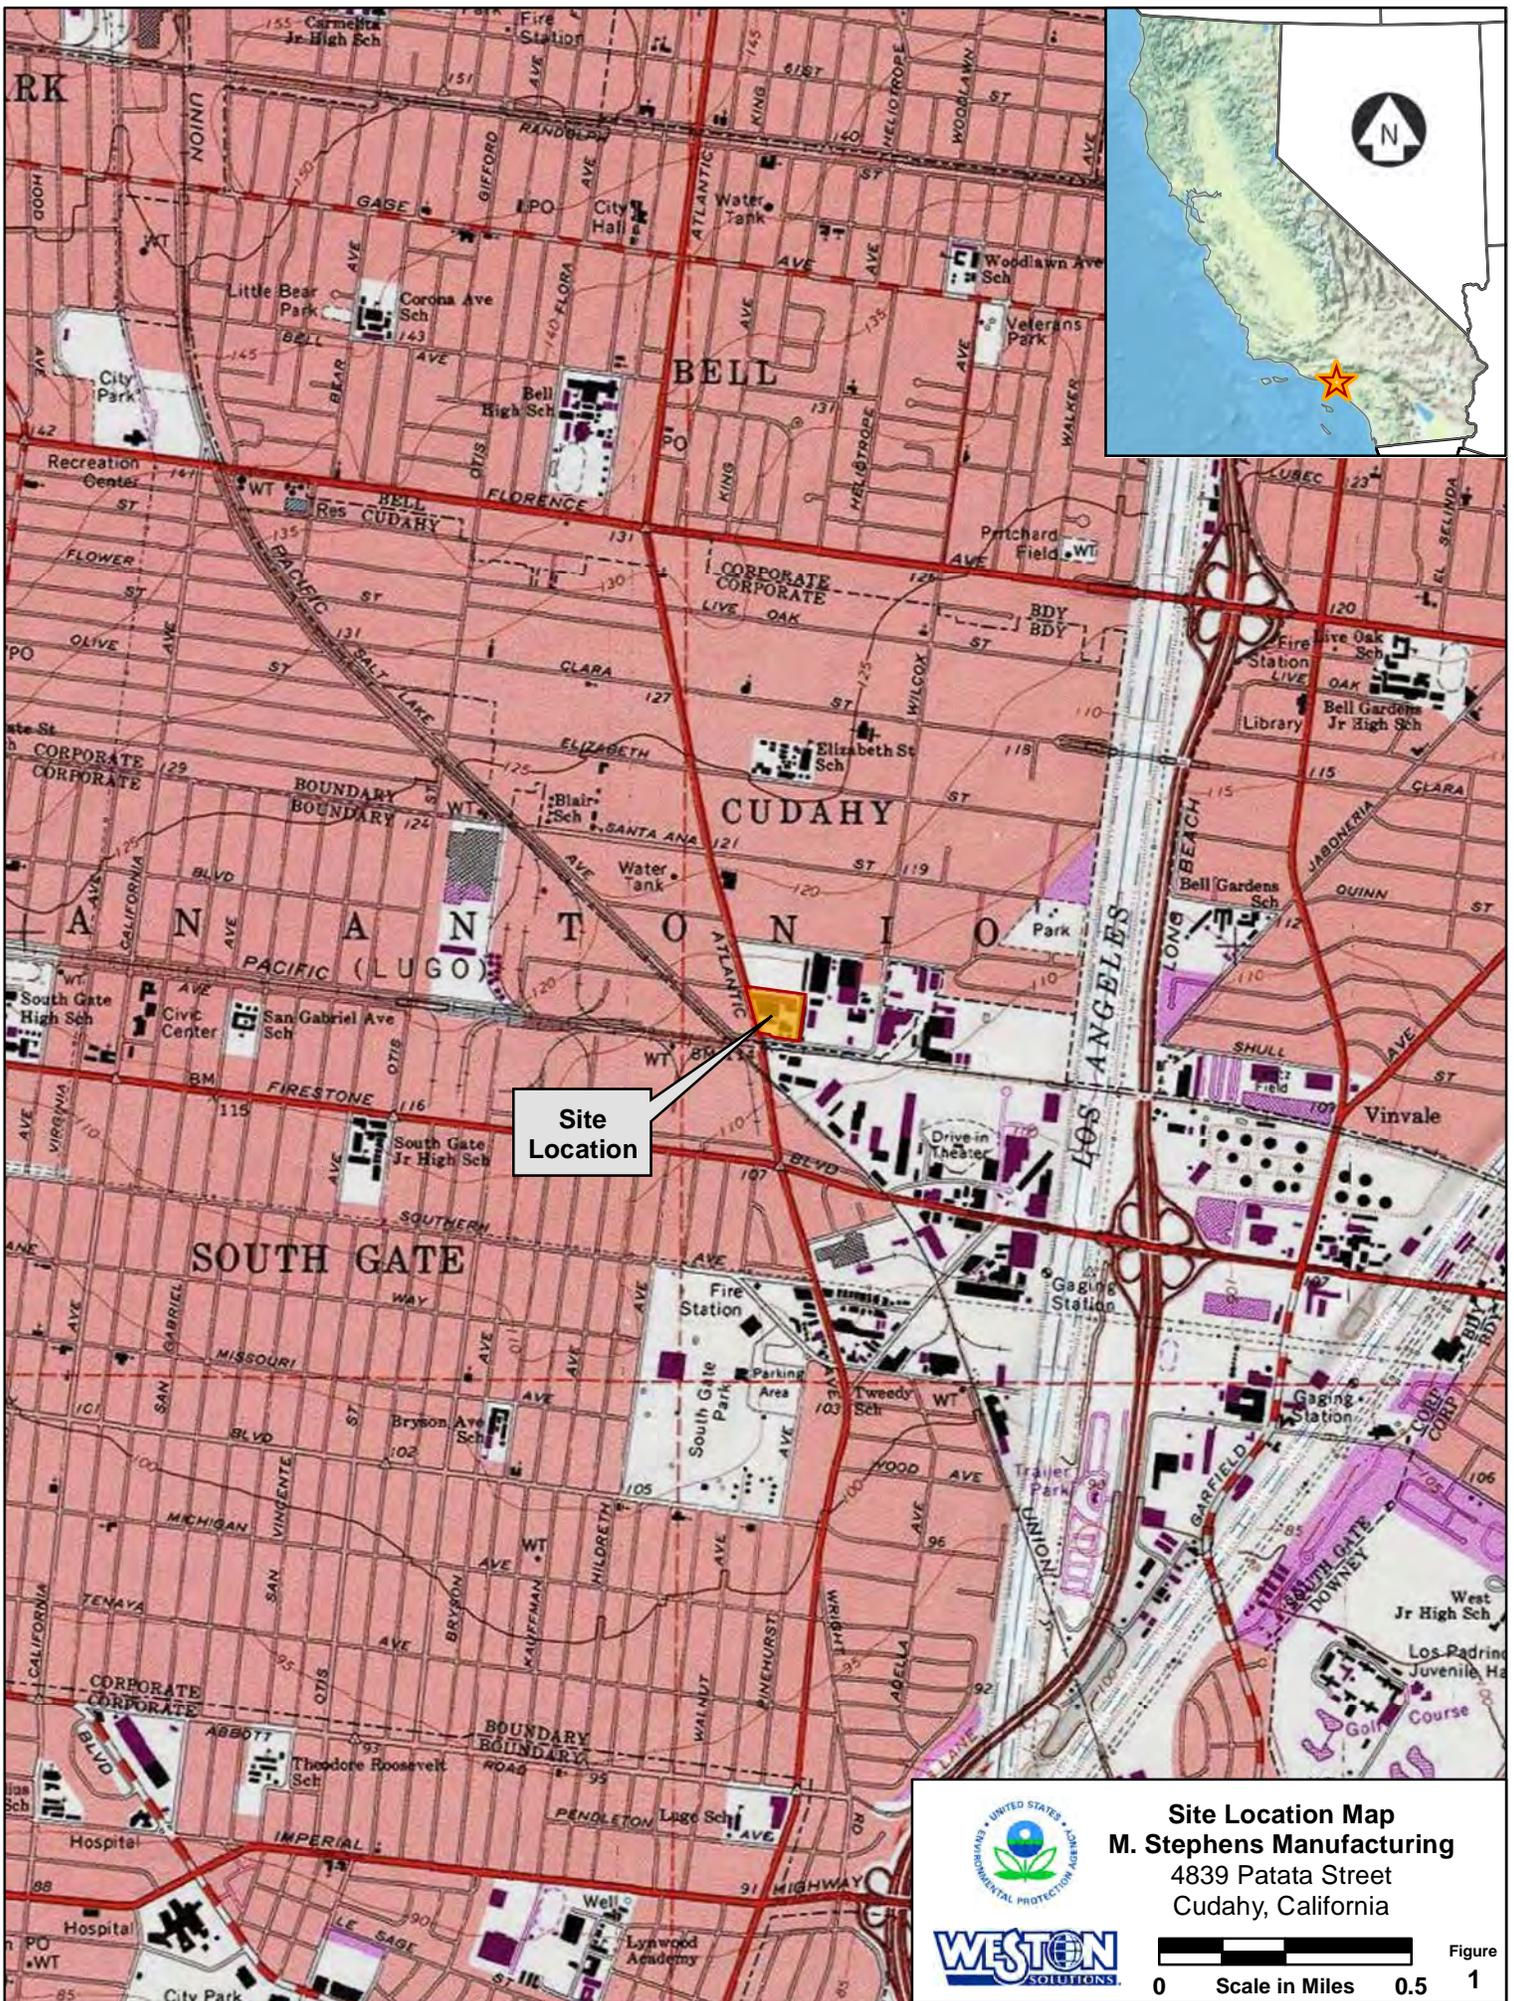

less frequently been used as the facility address. PCE-containing waste was generated at the site in at least the late 1980s and in 1999 (AN, 1997; DTSC, 2013; EDR, 2014b; EDR, 2014c; EPA, 2014b; TCN, 2014; TEP, 2014).

Three USTs were historically used to store gasoline and/or oil in association with on-site operations. In addition, an oil-filled car-hoist was used during operations as well as several overhead crane-ways that likely utilized some form of hydraulic oil. The USTs, car-hoist, and crane-ways appear to have been removed from regular service by 1986 when M. Stephens Manufacturing initiated on-site operations. No additional information is known regarding the specific use of on-site USTs. Unaltered petroleum products, as well as any substances that are purposefully added to the indigenous petroleum product during the refining process, are excluded from consideration under CERCLA (CC, 2005; DPW, 2007; EDR, 2014b; EDR, 2014c; LACSD, 1992; RWQCB, 1995).

A subgrade clarifier was historically used in on-site operations between at least 1978 and 2003. The clarifier received wastewater from the facility and, under permit, discharged effluent to the sanitary sewer system. The clarifier system was used by at least Trico Superior and M. Stephens Manufacturing. No additional information is known regarding the influent waste-streams associated with this clarifier (CC, 2005; LACSD, 2003; TSD, 1980).

In September 2005, a Limited Phase II Environmental Site Assessment (ESA) was conducted at the site by an outside company in association with a potential real estate transaction. This ESA included the collection of subsurface soil matrix samples at 11 locations across the site. Detectable concentrations of PCE were identified in a shallow soil sample collected from adjacent to the former clarifier and in a shallow soil sample collected from a location approximately 70 feet west of the clarifier. No additional elevated concentrations of VOCs or metals were reported during the investigation. Additional details on the 2005 ESA investigation are provided in Section 3.0 (CC, 2005).

No additional information is known regarding specific on-site historic operations, hazardous substances, or hazardous substance management practices. With the exception of the 2005 ESA and the soil matrix sampling that occurred during UST removal activities, no known soil vapor, soil matrix, or groundwater sampling has been conducted at the site.

2.4 Regulatory Involvement

2.4.1 U. S. Environmental Protection Agency

The M. Stephens site was not listed in the Resource Conservation and Recovery Information System (RCRIS) database as of December 6, 2014 (EPA, 2014b).

The site is listed in the Toxics Release Inventory (TRI) database as ‘M. Stephens Manufacturing Inc.’ (TRI ID: 90201MSTPH8420S), addressed at 8420 S. Atlantic Avenue. The most recent release information provided in the database is from 1995 (EPA, 2014a).

2.4.2 California Environmental Protection Agency, Department of Toxic Substances Control (DTSC)

The M. Stephens site is listed in the California Department of Toxic Substances Control’s (DTSC) EnviroStor database as M Stephens Manufacturing (Envirostor ID: 60001790) at 4839 Patata Street. The site is listed as an ‘Evaluation’ site that was referred to EPA on September 17, 2013. DTSC completed a Site Screening Assessment (SSA) for the M. Stephens site in June 2013. The SSA was prepared for EPA and has a final sign-off date of September 30, 2013. DTSC has had no known additional involvement with the site (DTSC, 2013; DTSC, 2014b).

2.4.3 California Environmental Protection Agency, Regional Water Quality Control Board (RWQCB)

The M. Stephens site is listed in the California Regional Water Quality Control Board’s (RWQCB) GeoTracker database as M Stephens Manufacturing (GeoTracker ID: T0603703809; Case No. 1-11513) at 4839 Patata St. The site is listed as a ‘LUST Cleanup Site’ with a cleanup status as ‘Completed – Case Closed as of 9/27/1995.’ The potential contaminant of concern is listed as ‘gasoline’ and the potential media affected is ‘soil.’ Between at least 1978 and 1980, the RWQCB, in conjunction with the County Sanitation District of Los Angeles County (LACSD), conducted oversight of the operation and monitoring of waste discharges to the on-site clarifier (RWQCB, 1995; RWQCB, 2014; TSD, 1980).

2.4.4 Los Angeles County Department of Public Works (LADPW)

In June 2007, the Los Angeles County department of Public Works (LADPW) issued a ‘No Further Action’ letter for the M Stephens site in regard to the closure and removal of the on-site clarifier (DPW, 2007).

2.4.5 County Sanitation District of Los Angeles County (LACSD)

Between at least 1978 and 2003, the LACSD, in conjunction with the RWQCB, conducted oversight of the operation and monitoring of waste discharges to the clarifier at the M. Stephens site. In 1992, LACSD conducted an inspection of the site to investigate discrepancies in the number and size of on-site USTs and determined that the three known USTs had all been removed. In June 1997, LACSD issued a Notice of Violation (NOV) (Violation Notice No. 14195) to M. Stephens

Manufacturing due to wastewater being discharged to the sanitary sewer system that contained concentrations of zinc in excess of federal regulations. In December 2003, LACSD voided the Industrial Wastewater Discharge Permit for the site (Permit No. 14831) due to the company having ceased all industrial wastewater producing activities (LACSD, 1992; LACSD, 1997; LACSD, 2003; TSD, 1980).

3.0 INVESTIGATIVE EFFORTS

In November 1989, the two USTs formerly located at the southeastern portion of the M. Stephens site were excavated and removed. Three confirmation soil samples were collected from the base of the excavation but a sample was not collected from the former dispenser area. In February 1994, at the direction of the RWQCB, soil samples were collected from the dispenser area, which exhibited elevated concentrations of petroleum hydrocarbons. In March 1995, an additional subsurface investigation was conducted to further delineate the extent of the hydrocarbon contamination, which included the advancement of three borings to a total depth of approximately 55 feet bgs. The former car-hoist was discovered during this investigation and in August 1995, the car-hoist and approximately 184 cubic yards of petroleum-impacted soil were excavated and removed. All confirmation samples exhibited petroleum hydrocarbon concentrations below project-specified action levels. Groundwater was not encountered during the UST investigations. Unaltered petroleum products, as well as any substances that are purposefully added to the indigenous petroleum product during the refining process, are excluded from consideration under CERCLA (AI, 1995).

In September 2005, a Limited Phase II ESA was conducted at the M. Stephens site by an outside company in association with a potential real estate transaction. This ESA included the collection of 39 subsurface soil matrix samples at 11 locations across the site. Of the 11 locations, two were located adjacent to the former clarifier, one was located approximately 70 feet west of the former clarifier, one was located in the south-central portion of the site, one was located at the southeastern portion of the site (southern portion of former Jackson Iron Works Building), and six were located in the vicinity of the northern site boundary. At each location, borings were advanced to 15 feet bgs and attempt was made to collect samples at 2, 5, 10, and 15 feet bgs. In total, 39 samples were collected, 12 of which were submitted to a laboratory and selectively analyzed for petroleum hydrocarbons, metals, VOCs, semi-volatile organic compounds, and pH. The remaining 27 samples were archived and were not analyzed. PCE was identified in the 5-foot bgs sample collected from adjacent north to the former clarifier at a concentration of 6.7 micrograms per kilogram ($\mu\text{g}/\text{kg}$). PCE was also identified in a sample collected from 2-foot bgs at a location approximately 70 feet west of the former clarifier at a concentration of 5.9 $\mu\text{g}/\text{kg}$. The residential Regional Screening Level (RSL) for PCE is 24,000 $\mu\text{g}/\text{kg}$. Elevated, but relatively low, concentrations of petroleum hydrocarbons were also identified in on-site soils. No additional elevated concentrations of VOCs or metals were reported during the investigation (CC, 2005).

No additional soil vapor, soil matrix, or groundwater sampling investigations have been identified in connection with the site.

Table 2: Summary of Selected On-Site Soil and Groundwater Investigations

Site Location	Investigation	Maximum Results	
		Soil	Groundwater
Site-wide	2005 Limited Phase II ESA	PCE = 6.7 µg/kg (5 ft-bgs adjacent north to former clarifier) PCE = 5.9 µg/kg (2 ft-bgs ~70 ft west of former clarifier)	--
ESA = Environmental Site Assessment ft-bgs = feet below ground surface PCE = tetrachloroethylene		µg/kg = micrograms per kilogram -- = media not sampled Note: PCE RSL is 24,000 µg/kg

4.0 HAZARD RANKING SYSTEM FACTORS

4.1 Sources of Contamination

For HRS purposes, a source is defined as an area where a hazardous substance has been deposited, stored, disposed, or placed, plus those soils that have become contaminated from migration of a hazardous substance.

Potential hazardous substance sources associated with the M. Stephens site include, but may not be limited to:

- On-site soils contaminated with VOCs and metals as a result of historic on-site operations (EDR, 2014b; EDR, 2014c; CC, 2005; DTSC, 2013).

4.2 Groundwater Pathway

In determining a score for the groundwater migration pathway, the HRS evaluates: 1) the likelihood that sources at a site actually have released, or potentially could release, hazardous substances to groundwater; 2) the characteristics of the hazardous substances that are available for a release (i.e., toxicity, mobility, and quantity); and 3) the people (targets) who actually have been, or potentially could be, impacted by the release. For the targets component of the evaluation, the HRS focuses on the number of people who regularly obtain their drinking water from wells that are located within 4 miles of the site. The HRS emphasizes drinking water usage over other uses of groundwater (e.g., food crop irrigation and livestock watering), because, as a screening tool, it is designed to give the greatest weight to the most direct and extensively studied exposure routes.

4.2.1 Hydrogeological Setting

The M. Stephens site lies within the Central Subbasin in the Coastal Plain of the Los Angeles Groundwater Basin. The Central Subbasin is generally bound to the north by the folded, uplifted and eroded Tertiary basement rocks of the La Brea High surface divide; to the northeast and east by the less permeable Tertiary rocks of the Elysian, Repetto, Merced, and Puente Hills; to the southeast by the Coyote Creek flood control channel (approximate Los Angeles County/Orange County boundary); and to the southwest by the Newport Inglewood Uplift, a regional anticline associated with the Newport Inglewood fault system. The subbasin has historically been further divided into four areas; the Los Angeles Forebay at the northwest, the Montebello Forebay at the north, the Whittier Area at the northeast, and the Pressure Area at the central and southwest. The forebays are characterized by generally unconfined and relatively interconnected aquifer systems. The Montebello Forebay, as well as the Los Angeles Forebay to a lesser degree, serves as the primary groundwater recharge area for both shallow and deep aquifers across the entirety of the subbasin. The Central Basin Pressure Area is characterized by generally confined aquifer systems separated by relatively impermeable clay layers, although semipermeable zones within these layers allow aquifers to be interconnected in some areas. The Los Angeles and San Gabriel rivers pass across the surface of the Central Basin, primarily by way of engineered concrete channels, on their

way to the Pacific Ocean. The average net annual precipitation in the subbasin is approximately 12 inches (DWR, 1961; DWR, 2004).

The M. Stephens site is located within the northern portion of the Central Basin Pressure Area with the Los Angeles Forebay to the northwest and the Montebello Forebay to the northeast. Throughout the Pressure Area, groundwater occurs in Holocene alluvium, the upper Pleistocene Lakewood Formation, and the lower Pleistocene San Pedro Formation. The aquifers underlying the site are, in descending order: the Gaspur, Exposition, Gage/Gardena, Jefferson, Lynwood, Silverado, and Sunnyside. Underlying the Recent alluvium, which includes the Gaspur aquifer, sediments of the upper Pleistocene Lakewood Formation, which includes the Exposition and Gage/Gardena aquifers, are present to a depth of approximately 300 to 400 feet bgs. Sediments of the lower Pleistocene San Pedro Formation, which includes the Lynwood through Sunnyside aquifers, unconformably underlie the Lakewood Formation and extend to a depth of approximately 1,300 feet bgs. The regional groundwater flow direction within the subbasin, which was calculated using data from wells screened within the upper San Pedro Formation (Lynwood through Silverado aquifers), is generally to the southwest with local and temporal variations from approximately west to southeast. Based upon data collected between 2007 and 2013, flow within these deeper aquifers in the vicinity of the site trended towards the southwest with temporal variations from west to south-southwest (DWR, 1961; DWR, 2004; WRD, 2014).

Throughout much of the subbasin, the Pleistocene-age aquifers are under confined conditions due to the presence of fine-grained, low-permeability interbedded sediments. Although these fine-grained sediments, or aquicludes, generally restrict the downward migration of groundwater from overlying aquifers, semipermeable zones within the aquicludes allow aquifers to be interconnected in some areas. In addition, hydrogeologic modeling of multi-aquifer systems similar to that found in the Central Basin Pressure Area, have concluded that groundwater wells screened across multiple aquifers (or wells with improperly constructed annular seals that cross multiple aquifers) can act as a direct pathway for the migration of significant volumes of shallow groundwater into deep confined aquifers when vertical hydraulic head variations create a downward hydraulic gradient. The process of this downward migration is increased in areas where the deeper aquifers have periods of high-volume pumping such as seasonal demand. Furthermore, additional studies have shown that liquids that are denser than water [i.e., dense non-aqueous phase liquids (DNAPLs), such as TCE and PCE], can migrate downward through a multi-aquifer well even when vertical hydraulic head variations create an upward hydraulic gradient. As of the end of the 2012-2013 fiscal year, there were 537 known extraction wells (306 active and 231 inactive) within the subbasin (AwwaRF, 2006; DWR, 1961; DWR, 2013; Johnson et al., 2011).

Aquifer interconnection within two miles of the site has been documented between the Gaspur through Gage/Gardena and between the Jefferson through Silverado. Aquifer interconnection between the Gage/Gardena and Jefferson, and between the Silverado and Sunnyside, has not been documented within two miles of the site. However, due to the relatively large number of older and poorly documented groundwater wells within the subbasin, including numerous wells that are screened across multiple aquifers and may be acting as conduits between these aquifers, interconnection between the Gage/Gardena and Jefferson, and between the Silverado and Sunnyside, is projected for HRS purposes (DWR, 1961; DWR, 2004; DWR, 2013).

The shallow groundwater flow direction in the vicinity of the M. Stephens site is not known. At the adjacent GENIL site (EPA ID No.: CAD027897164), shallow groundwater flow directions calculated using existing monitoring wells have been conflicting with reported flow directions varying from north to south. During on-site subsurface investigations, groundwater was not encountered to the total explored depth of 55 feet bgs; however, during groundwater investigations at the adjacent GENIL site, the depth to first groundwater has been generally reported at approximately 50-55 feet bgs. Based on this information, the depth to groundwater at the M. Stephens site is estimated to be approximately 60 feet bgs. The geologic materials encountered during on-site investigations were reported to be primarily composed of poorly-graded fine sands with interbedded minor lenses of silt and clay (AEGI, 2010; AI, 1995; CC, 2005).

4.2.2 Groundwater Targets

The nearest active or maintained-standby drinking water well to the M. Stephens site is Well 03. This well is operated by the Tract 349 Mutual Water Company and is located approximately 0.26 mile northwest of the site. Routine water quality sampling of this well has not reported elevated concentrations of contaminants of concern including: TCE, PCE, arsenic, or chromium. Approximately 167 drinking water wells are located within 4 miles of the site. In addition, at least 85 former wells have been abandoned or destroyed within 4 miles of the site. Water purveyors operating within 4 miles of the site include, but are not limited to: Tract 349 Mutual Water Company, City of South Gate, Tract 180 Mutual Water Company, GSWC - Bell/Bell Gardens, City of Huntington Park, City of Lynwood, Maywood Mutual Water Company #3, Maywood Mutual Water Company #2, City of Vernon, and Walnut Park Mutual Water Company (DTSC, 2014a; DWR, 1961; Google, 2014; RWQCB, 2015).

The City of South Gate's Well 07 was a public supply well located approximately 0.17 mile south-southeast of the site, which was removed from service in approximately 2002 and destroyed in approximately 2011 due primarily to elevated concentrations of TCE, arsenic, and chromium (including hexavalent chromium). The maximum reported TCE concentration of 14 µg/L and PCE concentration of 3.8 µg/L were identified during the most recent recorded sampling in October 2001. The maximum reported arsenic concentration of 15.1 µg/L was identified in December 1997. The maximum reported chromium concentration (primarily of the hexavalent species) of 86 µg/L was identified in August 2000. The federal Maximum Contaminant Levels (MCL) for TCE, PCE, arsenic, and chromium are 5.0 µg/L, 5.0 µg/L, 10 µg/L, and 100 µg/L, respectively. This well reportedly had a single screening interval that extended from 500 feet bgs to 600 feet bgs, which generally correlates to the reported depths for the Lynwood Aquifer (DWR, 1961; Google, 2014; RWQCB, 2015; App. C-2).

The GSWC - Bell/Bell Gardens system's Hoffman Well 02 was a public supply well located approximately 0.28 mile east-northeast of the site, which was removed from service in approximately late 2000 and destroyed in approximately October 2007 due primarily to elevated concentrations of chromium. The maximum reported TCE concentration of 15.3 µg/L was identified in November 1996. The maximum reported PCE concentration of 5.7 µg/L was identified in November 2000. The maximum reported 1,1-DCE concentration of 3.9 µg/L was

identified in July 1997. The maximum reported chromium concentration of 333 µg/L was identified in November 2000. The federal MCLs for TCE, PCE, 1,1-DCE, and chromium are 5.0 µg/L, 5.0 µg/L, 7.0 µg/L, and 100 µg/L, respectively. This well reportedly had three screening intervals situated at 437-444 feet bgs, 454-476 feet bgs, and 477-494 feet bgs; which generally correlates to the reported depths of the upper portion of the Lynwood Aquifer (DWR, 1961; Google, 2014; RWQCB, 2015; App. C-3).

4.2.3 Groundwater Pathway Conclusion

Based on the historic operations conducted at the M. Stephens site, the known hazardous substances utilized during these operations, and the limited analytical data collected during on-site subsurface investigations, there is evidence to indicate that a release of hazardous substances may have occurred from one or more sources at the site to shallow groundwater. The depth to shallow groundwater at the site is estimated to be approximately 60 feet bgs. The shallow groundwater flow direction at the site has not been adequately determined. Based upon recently collected data, flow within the deeper regional aquifers in the vicinity of the site trended towards the southwest with temporal variations from west to south-southwest. The geologic materials in the unsaturated zone between ground surface and the top of the aquifer are estimated to be composed of fine sands with interbedded silts and clays. At least 10 distinct water purveyors operate up to 167 municipal drinking water wells within 4 miles of the site. The nearest of these wells, Well 03, is an active well maintained by the Tract 349 Mutual Water Company and is located approximately 0.26 mile northwest of the site. Routine water quality sampling of this well has not reported elevated concentrations of contaminants of concern. At least 85 former wells have been abandoned or destroyed within 4 miles of the site. The City of South Gate's Well 7 was located approximately 0.17 mile south-southeast of the site and was removed from service in approximately 2002 due to elevated concentrations of TCE, arsenic, and chromium. In addition, GSWC - Bell/Bell Gardens system's Hoffman Well 02 was located approximately 0.28 mile east-northeast of the site and was removed from service in approximately 2000 due to elevated concentrations of chromium (AEGI, 2010; AI, 1995; CC, 2005; DTSC, 2014a; Google, 2014; RWQCB, 2015; WRD, 2014; App. C-2, C-3).

4.3 Surface Water Pathway

To determine the score for the surface water pathway, the HRS evaluates: 1) the likelihood that sources at a site actually have released, or potentially could release, hazardous substances to surface water (e.g., streams, rivers, lakes, and oceans); 2) the characteristics of the hazardous substances that are available for a release (i.e., toxicity, persistence, bioaccumulation potential, and quantity); and 3) the people or sensitive environments (targets) who actually have been, or potentially could be, impacted by the release. For the targets component of the evaluation, the HRS focuses on drinking water intakes, fisheries, and sensitive environments associated with surface water bodies within 15 miles downstream of the site.

Surface water runoff from the M. Stephens site is expected to infiltrate into the unpaved surfaces of the site with the excess flowing into curbside municipal stormwater drains located on adjacent public roadways (i.e., Atlantic Ave. and/or Patata St.). The nearest surface water body to the site

is the Los Angeles River, which is located approximately 0.5 mile east. The Los Angeles River is highly modified, having been lined with concrete along a majority of its length by the U.S. Army Corps of Engineers in the 1950s. Flows in the river are dominated by urban runoff and tertiary-treated effluent from several municipal wastewater treatment plants. The river empties into the Pacific Ocean at San Pedro Bay approximately 13.5 miles downstream of the site. There are no surface water intakes, fisheries, or sensitive environments associated with the Los Angeles River downstream of the site; however, there is a potential for fisheries and/or recreational areas to exist within San Pedro Bay (Google, 2014; RWQCB, 1994).

4.4 Soil Exposure and Air Migration Pathways

In determining the score for the soil exposure pathway, the HRS evaluates: 1) the likelihood that there is surficial contamination associated with the site (e.g., contaminated soil that is not covered by pavement or at least 2 feet of clean soil); 2) the characteristics of the hazardous substances in the surficial contamination (i.e., toxicity and quantity); and 3) the people or sensitive environments (targets) who actually have been, or potentially could be, exposed to the contamination. For the targets component of the evaluation, the HRS focuses on populations that are regularly and currently present on or within 200 feet of surficial contamination. The four populations that receive the most weight are residents, students, daycare attendees, and terrestrial sensitive environments.

In determining the score for the air migration pathway, the HRS evaluates: 1) the likelihood that sources at a site actually have released, or potentially could release, hazardous substances to ambient outdoor air; 2) the characteristics of the hazardous substances that are available for a release (i.e., toxicity, mobility, and quantity); and 3) the people or sensitive environments (targets) who actually have been, or potentially could be, impacted by the release. For the targets component of the evaluation, the HRS focuses on regularly occupied residences, schools, and workplaces within 4 miles of the site. Transient populations, such as customers and travelers passing through the area, are not counted.

As of April 2014, there were no residences, schools, or daycare facilities located on the M. Stephens site. The nearest residential property to the site was located approximately 0.18 mile north. No sensitive environments were located on the site and the majority of the surface of the site appeared to be either unpaved or heavily-weathered asphalt with minor amounts of vegetation. The site appeared entirely fenced and generally inaccessible to the public. There were no active operations at the site and the total number of employees working at the site was zero (DTSC, 2013; Google, 2014).

5.0 REMOVAL EVALUATION CONSIDERATIONS

The National Contingency Plan [40 CFR 300.415 (b) (2)] authorizes the EPA to consider emergency response actions at those sites that pose an imminent threat to human health or the environment. For the following reasons, a referral to Region 9's Emergency Response Office does/does not appear to be necessary:

- As of April 2014, there were no residences, schools, or daycare facilities located on the M. Stephens site. In addition, no sensitive environments were located on the site and the site appeared entirely fenced and generally inaccessible to the public (DTSC, 2013; Google, 2014).

6.0 SUMMARY

The M. Stephens Manufacturing, Inc. (M. Stephens) site is located at 8420 South Atlantic Avenue, Cudahy, California. Additional addresses associated with the site property include, but are not limited to: 4839 Patata Street. The site is composed of eight distinct county parcels and occupies approximately 5.9 acres in an urban industrial area. As of April 2014, the only significant structure at the site was the M. Stephens Manufacturing Building, which was located at the southwestern portion.

The site is currently owned by multiple entities including the Cudahy Economic Development Corporation and two related real-estate investment firms. Historic operations at the site include, but may not be limited to: metal fabrication, electric parts manufacturing, and tool manufacturing from approximately the late 1940s through the mid-1980s; and die-cast electrical parts manufacturing from approximately 1986 through 2003. There have been no known significant operations conducted at the site since 2003. Entities known to have operated at the site include: Jackson Iron Works; Grating Pacific, Inc.; Plasma Specialists, Inc.; Patata Engineered Wire & Metal Manufacturing Company; Automatic Instrument Service Company; Martin Electric Motors; Greer Machine Company; Pratt & Whitney Tool Division/Colt Industries; Trico Superior; Sierra Tank and Construction Company; and M. Stephens Manufacturing/BWF/Intermatic/Teddico.

A subgrade clarifier was historically used in on-site operations between at least 1978 and 2003. The clarifier received wastewater from the facility and discharged effluent under permit to the sanitary sewer system. No information is known regarding the influent waste-streams associated with this clarifier, which was used by at least Trico Superior and M. Stephens Manufacturing. In 1986, operations across the entirety of the site were converted over primarily to the manufacturing of die-cast metal electrical outlet boxes by the M. Stephens Manufacturing Company. In 2003, on-site operations were discontinued and consolidated with operations at a Tijuana, Mexico facility. PCE-containing waste was generated at the site in at least the late 1980s and in 1999. No additional information is known regarding specific on-site historic operations, hazardous substances, or hazardous substance management practices

The site is not listed in the RCRIS database. The site is listed in the TRI database (TRI ID: 90201MSTPH8420S). The most recent release information provided in the database is from 1995. With the exception of the 2013 SSA, DTSC has not had any significant involvement with the site. The RWQCB conducted oversight and direction over the removal and subsequent sampling of two leaking petroleum USTs that were historically located at the southeastern portion of the site. RWQCB issued a NFA letter for the UST case in September 1995. In addition, between at least 1978 and 1980, the RWQCB, in conjunction with the County Sanitation District of Los Angeles County (LACSD), conducted oversight of the operation and monitoring of waste discharges to the on-site clarifier. In June 1997, LACSD issued a NOV to M. Stephens Manufacturing due to wastewater being discharged to the sanitary sewer system that contained concentrations of zinc in excess of federal regulations. In June 2007, the Los Angeles County department of Public Works (LADPW) issued a NFA letter for the site in regard to the closure and removal of the on-site clarifier.

Between 1989 and 1995, several subsurface investigations were conducted at the southeastern portion of the site in connection with the removal of on-site USTs. In 2005, a Limited Phase II ESA was conducted at the site by an outside company in association with a potential real estate transaction. The ESA included the collection of subsurface soil matrix samples at 11 locations across the site, two of which were located adjacent to the former clarifier. PCE was identified in a shallow sample collected from adjacent to the former clarifier at a concentration of 6.7 $\mu\text{g}/\text{kg}$ and in a shallow sample collected from a location approximately 70 feet west of the former clarifier at a concentration of 5.9 $\mu\text{g}/\text{kg}$. The residential RSL for PCE is 24,000 $\mu\text{g}/\text{kg}$. No additional elevated concentrations of VOCs or metals were reported during the investigation. No known soil vapor or groundwater sampling investigations have been identified in connection with the site.

The following pertinent Hazard Ranking System factors are associated with the site:

- Based on the historic operations conducted at the site, the known hazardous substances utilized during these operations, and the limited analytical data collected during on-site subsurface investigations, there is evidence to indicate that a release of hazardous substances may have occurred from one or more sources at the site to shallow groundwater.
- The depth to shallow groundwater is estimated to be approximately 60 feet bgs. The shallow groundwater flow direction at the site has not been adequately determined. The regional groundwater flow direction within the deeper aquifers in the vicinity of the site generally trends towards the southwest with temporal fluctuations from west to south-southwest. Geologic materials in the unsaturated zone between ground surface and the top of the aquifer are primarily composed of fine sands with interbedded silts and clays. The average net annual precipitation is approximately 12 inches.
- The nearest drinking water well is Tract 349 Mutual Water Company's Well 03, which is located approximately 0.26 mile northwest. Routine water quality sampling of this well has not reported elevated concentrations of contaminants of concern. At least 10 distinct water purveyors operate up to 167 municipal drinking water wells within 4 miles of the site. At least 85 former wells have been abandoned or destroyed within 4 miles of the site. The City of South Gate's Well 7 was located approximately 0.17 mile south-southeast of the site and was removed from service in approximately 2002 due to elevated concentrations of TCE, arsenic, and chromium. In addition, GSWC - Bell/Bell Gardens system's Hoffman Well 02 was located approximately 0.28 mile east-northeast of the site and was removed from service in approximately 2000 due to elevated concentrations chromium.
- Surface water runoff is expected to infiltrate into the unpaved surfaces of the site with the excess flowing into curbside municipal stormwater drains located on adjacent public roadways. The nearest surface water body to the site is the Los Angeles River, which is located approximately 0.5 mile east. No drinking water intakes are located within 15 miles downstream; however, there is the potential for fisheries and/or recreation areas to exist within this distance.

- As of April 2014, there were no residences, schools, or daycare facilities located on the site. No sensitive environments were located on the site and the majority of the surface of the site was either unpaved or covered with heavily-weathered asphalt and minor amounts of vegetation. The site appeared entirely fenced and generally inaccessible to the public. There were no active operations at the site and the total number of employees working at the site was zero.

CONTACT REPORT 2

AGENCY/AFFILIATION: City of South Gate		
DEPARTMENT: Public Works		
ADDRESS/CITY: 4244 Santa Ana Street, South Gate		
COUNTY/STATE/ZIP: Los Angeles, California, 90280		
CONTACT(S)	TITLE	PHONE
Ron Hernandez	Water Operations Foreman	(323) 563-5796
PERSON MAKING CONTACT: Anitra B. Rice		DATE: 04 January 2011
PERSON MAKING CONTACT: Amanda K.C. Reilly		DATE: 22 June 2011
PERSON MAKING CONTACT: Brian P. Reilly		DATE: 31 March 2015
SUBJECT: Public Water Distribution System Information		
SITE NAME: M. Stephens Manufacturing, Inc.		EPA ID#: CAN000909569

Mr. Hernandez indicated that the City of South Gate operates a drinking water supply system that serves approximately 95,115 customers. The blended system consists of six active drinking water wells (Wells 14, 18, 19, 24, 26, and 28), four stand-by wells (Wells 13, 23, 25, and 27), one inactive well (Well 22-B), and seven destroyed wells (Wells 7, 8, 9, 12, 20, and 22-A). The six active groundwater wells provide 100 percent of the drinking water. No single well provides more than 40 percent of the total demand at any given time. The City of South Gate does not sell or purchase water to other water systems and/or water users.

Wells 13, 14, 18, and 19 are treated at the wellhead due to elevated concentrations of tetrachloroethylene (PCE). Well 25 was put into standby status due to high manganese concentrations.

Well 25 partially collapsed in June 2009 during the El Centro earthquake. The well was relined to a Total Depth of 395 feet in May 2010. The collapse was at about 415 feet below ground surface (ft-bgs). From that interval to about 385 ft-bgs, gravel was placed as a filtering media in the existing 16-inch casing. The liner that was placed to a depth of 395 ft-bgs is telescopic with the new wire wrap screen and casing.

Well 27 partially collapsed during rehabilitation work and was relined to a depth of 920' with a stainless steel wired wrapped liner in August 2001.

Well 7 was destroyed by cementing via tremmie pipe and shooting the well with explosive charges with ball bearings in January 2011 due to the well age and multiple contaminants, specifically trichloroethylene (TCE) and hexavalent chromium.

Well 12 was destroyed in September 1984 by cementing in the well. The well was destroyed due to: the well having been 60 years old at that point; small rocks and casing materials had to be

bailed out and the casing was determined to have failed at 30 ft-bgs and 40 ft-bgs; the pump was operating at only 48% efficiency; perforations were found to have been enlarged at 540'; compression breaks were identified at 164 ft-bgs and 304' ft-bgs; well was out of round, egg-shaped, at 396, 416, 530 and 536 ft-bgs; sand covering one foot of the bottom perforations, so 18 feet of 19 feet of total perforations were deemed usable.

Mr. Hernandez also confirmed the accuracy of the information in the following table:

WELL NAME	WELL STATUS	YEAR DESTROYED	WELL DEPTH (feet)	SCREENING INTERVAL(S) (ft-bgs)
Well 7	Destroyed	2011	830	500 - 600

SUBJECT: Public Water Distribution System Information		
SITE NAME: M. Stephens Manufacturing, Inc.		EPA ID#: CAN000909569

Bell/Bell Gardens System

According to Mr. Robert Collar, as of December 2014, the Bell/Bell Gardens System operates 7,481 service connections. The system consists of five active wells (Bissell #3, Clara #2, Gage #2, Otis #3, and Watson #1), one active/offline well (Bissell #2), two standby/inactive wells (Gage 1 and Priory 2); which supply 99 percent of the water in the system. In addition, the system formerly included four now-destroyed wells (Otis #1, Otis #2, Chanslor #1, and Hoffman #2). Bissell #2 has been offline since June 2012 due to sand issues. Gage 1 and Priory 2 are both standby/inactive, since July 2003 and March 2008, respectively, also due to sand issues. The remaining one percent of the water within the system is provided by the Central Basin Municipal Water District (CBMWD), who obtains its imported water from the Metropolitan Water District of Southern California (MWD). No individual well supplies more than 40 percent of the total supply. Watson #1 water is being treated to remove TCE and PCE.

Otis #1 and #2 were old wells and past their useful life, so they were destroyed and replaced by Otis #3 in 2007.

Chanslor #1 was destroyed in 2007 primarily due to its condition and mechanical problems. Note that VOCs had been detected in groundwater produced from this well, but it's not clear at this point what role, if any, VOCs played in the decision to destroy the well.

Hoffman #2 was destroyed because the need to treat groundwater from this well to remove hexavalent chromium made continued operation of this well uneconomical. Note that VOCs had also been detected in groundwater produced from this well, but it's not clear at this point what role, if any, VOCs played in the decision to destroy the well.

Mr. Collar also confirmed the accuracy of the information in the following table (next page) and verified that all information provided in this contact report is permissible to be presented in a publically-available document.

GSWC – Bell/Bell Gardens System				
Well Name	Well Address (CONFIDENTIAL)	Screen Depths (feet below ground surface)	Percent Contribute to Drinking Water ¹	Avg. Gallons Per Minute ²
Bissell #2		575-1,275	0%	0

<p>¹Zero percent (0%) indicates that this well did not contribute drinking water to the system in 2014, whereas 100% indicates that this well did supply drinking water. Because of the way the system is operated, a fixed percentage of drinking water contributed to the system by each well cannot be defined. In other words, each well may contribute anywhere from 0 to 100% of the water in the system at any time throughout the year.</p> <p>²Pumping rate of each well is an average for calendar year 2014, based on daily average pumping rates.</p>

Subject: Groundwater Well Installation and
Confirmation Soil Boring Report,
8411 South Atlantic Avenue
Cudahy, California
SCP No. 1148, Site ID No. 2040226

Dear Mr. Indermill:

Ardent Environmental Group, Inc. (Ardent) has completed the groundwater well installation and confirmation soil borings at the property located at 8411 South Atlantic Avenue in the city of Cudahy, California (site). Work was conducted in general accordance with the work plan prepared by Ninyo & Moore dated August 16, 2006 and the Regional Water Quality Control Board, Los Angeles Region (RWQCB) approval letter dated January 29, 2010. The purpose of this work was to further evaluate the lateral extent of volatile organic compounds (VOCs) in groundwater, direction of groundwater flow, and to assess the efficiency of a vapor extraction system (VES) that previously operated at the site. The attached report presents our methodology, findings, opinions, and conclusions regarding the environmental conditions at the site. If there are any questions, please feel free to call the undersigned at your convenience.

Sincerely,
Ardent Environmental Group, Inc.

3.2 Historical Land Use of the Surrounding Vicinity

The site vicinity has been used for small commercial and residential uses, or as vacant land from at least 1928 through 1938. In the 1940s and 1950s, an increase in larger commercial and industrial facilities took place on the surrounding properties.

Ardent has identified a number of properties in the site vicinity which may have used or have reportedly used chlorinated solvents. The closest of which is GIL, located immediately south of the site.

After vacating the site in 1970, GIL redeveloped the property immediately south of the site (which was formerly occupied by residences and stores) with the existing commercial building. GIL has used this property to continue their inspection laboratory business, although the current GIL business emerged out of bankruptcy proceedings. In 2004 and as discussed below, GIL completed a number of environmental investigations at the off-site GIL property. These investigations discovered VOC-impacted soil and groundwater beneath the off-site GIL property (see Section 3.3).

In addition and as discussed above, a number of municipal wells in the site vicinity have discovered TCE and other chemicals in groundwater. Most of these wells have been inactivated or equipped with well-head treatment systems; it appears that a regional groundwater issues is present.

3.3 Investigations Completed at General Inspection Laboratory

On Atlantic, LLC recently retained Ardent to complete a regulatory file review of the GIL property. This assessment included requesting file reviews from the RWQCB, the Department of Toxic Substances Control (DTSC) Cypress office, and the DTSC Chatsworth office. In addition, Ardent reviewed available information on the State Water Resources Control Board (SWRCB) GeoTracker website and interviewed regulatory case handlers. According to GeoTracker, the GIL property is an open case with the Site Cleanup Program Unit (formerly Spills, Leaks, Investigations and Cleanups [SLIC] 1). Very limited information was

provided on the GeoTracker website or at the DTSC Chatsworth office. The following presents our conclusions of the reviews.

- Phase I ESAs have been completed at the GIL property and have identified solid waste management units (SWMUs) and areas of concern (AOC) as defined by the DTSC Permit By Rule regulations. Soil, soil gas, and groundwater investigations have been completed to further assess these potential sources of contaminants. Based on the results, elevated concentrations of VOCs, namely TCE (up to 153 micrograms per kilogram [ug/kg]) and PCE, have been detected in sporadic soil samples collected within the vadose zone. TCE was reported at up to 214 ug/kg in the capillary fringe. Although elevated concentrations of TCE have also been detected in groundwater beneath the GIL property, the concentrations in groundwater were magnitudes higher than those reported in soil. No detectable concentrations of PCE were reported in the groundwater samples. In addition, a Human Health Risk Assessment (HHRA) has indicated that the remaining VOC concentrations in soil gas and groundwater would not pose a human health threat to occupants of the property.
- Groundwater flow has been reported on the GIL property to be in a southwesterly direction, while groundwater flow at the On Atlantic property has been reported in a northeasterly direction. Ardent representatives have completed nine quarterly sampling events from 2004 through 2007; all of which showed the groundwater flow direction to the northeast. To assess whether a possible survey or clerical error had occurred, Ardent requested that the survey locations be double checked. Data indicated that the survey information was accurate. GIL, on the other hand, has apparently completed two sampling events from the wells located on the GIL property. Based on data collected from agency files during previous investigations, groundwater flow has been reported in many different directions at other properties located in the site vicinity.
- Due to the sporadic concentrations of TCE detected throughout the vadose zone, a decrease in the concentrations of TCE in soil versus groundwater, no detectable concentrations of PCE in groundwater samples, and the direction of groundwater flow, Earth Tech (consultant for GIL) concluded that it was unlikely that the GIL property had contributed to the groundwater issues. According to Earth Tech, the impacted groundwater beneath the GIL property was due to an off-site source. As expressed to Ardent during this assessment, the DTSC appeared to concur with this conclusion.
- Based on our review, there is a high likelihood that a TCE release has taken place from a former clarifier located on the On Atlantic property and has impacted groundwater. A release of TCE and PCE has also occurred on the GIL property. Although lower concentrations of TCE have been reported in a limited number of soil samples collected beneath the GIL property compared to those in groundwater, there is a high likelihood, in our opinion, that these constituents have migrated to groundwater and are contributing to the local groundwater issues. It has been our experience that TCE and other chlorinated solvents migrate vertically through soils. Earth Tech only completed limited soil sam-

pling in an area of elevated TCE soil vapor concentrations identified on the GIL property. In addition, there has been no groundwater samples collected directly downgradient from either the TCE or PCE soil vapor plumes. Therefore, Ardent does not concur with Earth Tech or the DTSC that the GIL property has not contributed to the local groundwater issues.

3.4 On-Site Investigations and Remediation

A clarifier was previously installed, owned, maintained, and operated by GIL, prior to the acquisition of the property by On Atlantic, LLC. Prior to the removal of the clarifier and based on a Phase I ESA, a number of soil and soil gas investigations were completed throughout the site and in the locations of possible source areas. Based on the results, VOCs, namely TCE, were detected in soil. Laboratory results of the soil gas samples indicated that the concentrations of TCE diminished at distances away from the clarifier. Based on this information, the extent of the impacted soils appeared to be limited to the area in the vicinity of the clarifier. In November 2002, Ninyo & Moore supervised the removal of the clarifier under order from, and the direction of, the Los Angeles County Department of Public Works (LACDPW).

On April 1, 2003, the LACDPW referred the case to the RWQCB. Ninyo & Moore prepared a work plan dated October 15, 2003 to further characterize the impacted soil and to conduct a feasibility/pilot study using vapor extraction technology. Following approval of the work plan by the RWQCB, Ninyo & Moore implemented the work plan. On August 20, 2004, Ninyo & Moore installed a multi-purpose groundwater/vapor well (designated MW-1) in the approximate location of the former clarifier (Figure 2). A vapor extraction system (VES) was installed on MW-1 and an extended pilot study/interim measure was completed. Laboratory results of effluent samples indicated that the concentrations of TCE appeared to have reached asymptotic conditions. Based on this information, the system was turned off and removed from the site. Based on the results of the VES study, Ninyo & Moore concluded that the vapor extraction technology was a feasible remediation technique and had apparently mitigated the impacted soil at the site.

Dear Al Novak/Elijah Hill:

Anderson Industries presents the attached site remediation report for the above referenced site in conjunction with the removal of a car hoist which was believed to be a 500-gallon waste oil tank as discovered by Amwest Environmental Engineering during their investigation in March 1995. The site soil was contaminated by Total Petroleum Hydrocarbon (TPH) at a concentration of 5,900 mg/Kg at a level of 14 feet below ground surface. The soil remedial investigation was undertaken as a result of Los Angeles County Department of Public Works (County) letter issued on April 12, 1995. The investigation was carried on according to the workplan submitted on May 23, 1995 as requested by County office.

This soil remediation investigation was conducted by Anderson Industries on a self-directed basis as proposed verbally by Regional Water Quality Control Board.

If you have any questions about any aspects of this report, please feel free to give us a call.

Sincerely yours,

William Anderson
Project Manager
